ANNOUNCEMENTS

College of  
*Engineering*

1967-68

# INFORMATION

## UNDERGRADUATES

All prospective engineering students should write for a copy of the *Announcement of General Information*, which describes the University community in greater detail. *Engineering at Cornell*, an illustrated Announcement prepared especially for precollege students, should also be obtained, for it describes the many career opportunities in engineering today, and additionally the Cornell campus environment. Both of these Announcements may be obtained by writing Cornell University Announcements, Day Hall, Ithaca, New York 14850.

## GRADUATES

The *Announcement of the Graduate School: Physical Sciences* should be consulted for additional information regarding admission, financial assistance, and degree requirements. It may be obtained by writing Cornell University Announcements, Day Hall, Ithaca, New York 14850.

Cornell University

College of Engineering

1967-68

# Academic Calendar

	1967-68	1968-69
Registration, new students	F, Sept. 8	F, Sept. 13
Registration, old students	S, Sept. 9	S, Sept. 14
Fall term instruction begins, 7:30 a.m.	M, Sept. 11	M, Sept. 16
Midterm grade reports due	S, Oct. 21	S, Oct. 26
Thanksgiving recess:		
Instruction suspended, 1:10 p.m.	W, Nov. 22	W, Nov. 27
Instruction resumed, 7:30 a.m.	M, Nov. 27	M, Dec. 2
Fall term instruction ends, 1:10 p.m.	S, Dec. 16	S, Dec. 21
Christmas recess		
Independent study period begins	W, Jan. 3	M, Jan. 6
Final examinations begin	M, Jan. 8	M, Jan. 13
Final examinations end	T, Jan. 16	T, Jan. 21
Interession begins	W, Jan. 17	W, Jan. 22
Registration, old students	F, Jan. 26	F, Jan. 31
Registration, new students	S, Jan. 27	S, Feb. 1
Spring term instruction begins, 7:30 a.m.	M, Jan. 29	M, Feb. 3
Deadline: changed or make-up grades	M, Feb. 5	M, Feb. 10
Midterm grade reports due	S, Mar. 9	S, Mar. 15
Spring recess:		
Instruction suspended, 1:10 p.m.	S, Mar. 23	S, Mar. 29
Instruction resumed, 7:30 a.m.	M, Apr. 1	M, Apr. 7
Spring term instruction ends, 1:10 p.m.	S, May 11	S, May 17
Independent study period begins	M, May 13	M, May 19
Final examinations begin	M, May 20	M, May 26
Final examinations end	T, May 28	T, June 3
Commencement Day	M, June 3	M, June 9
Deadline: changed or make-up grades	M, June 10	M, June 16

The courses and curricula described in this Announcement, and the teaching personnel listed therein, are subject to change at any time by official action of Cornell University.

## CORNELL UNIVERSITY ANNOUNCEMENTS

Volume 59. Number 5. Aug. 25, 1967. Published twenty times a year: four times in August; twice in March, April, June, July, September, and October; once in January, February, May, and December; no issues in November. Published by Cornell University at Edmund Ezra Day Hall, 18 East Avenue, Ithaca, New York 14850. Second-class postage paid at Ithaca, New York 14850.

## ENGINEERING AT CORNELL

In modern engineering, the one constant factor is change: change so swift that the engineering student must be offered a dynamically flexible education which matches his curriculum with the continually changing needs of the engineering profession. In its long, distinguished history, the College of Engineering at Cornell has consistently offered such an education.

Engineering courses have been taught at Cornell since the University was founded more than one hundred years ago. At that time, Cornell was regarded as a radical experiment in higher education, teaching as it did subjects like engineering and agriculture as well as the traditional humanities. The University's founder and first benefactor, Ezra Cornell, was convinced, however, that the classics and the more practical "mechanic arts" would thrive together and that the nation needed citizens educated in both. Mr. Cornell himself had considerable experience in engineering work. For Samuel F. B. Morse, he had laid the first telegraph line between Baltimore and Washington, and later he became a major stockholder in the Western Union Telegraph Company. The motto Mr. Cornell gave to his university—"I would found an institution where any person can find instruction in any study"—was the first clear statement of what we now know to be the true university concept in higher education.

In addition to the College of Engineering, Cornell University has six other divisions to which secondary-school graduates are admitted: Agriculture, Architecture, Arts and Sciences, Home Economics, Hotel Administration, and Industrial and Labor Relations. Also, the University has professional or graduate divisions in law, veterinary medicine, business and public administration, nutrition, nursing, and medicine. All but the last two divisions (which are in New York City) are in Ithaca, New York, on a campus that is generally regarded as one of the most beautiful in the United States.

Engineering students at Cornell, whether graduate or undergraduate, are not only a part of a distinguished engineering college but are also

## 6 ORGANIZATION OF THE COLLEGE

part of the larger University; they may, of course, draw upon the broad curricula of other divisions of Cornell.

The University has no requirements which force students into the same educational mold, and Cornell engineering students are diverse. Each is encouraged in his individual educational interests, and this enables the College to provide society with engineers whose individual capabilities are as broad and continuous as those of the engineering profession itself.

Cornell has produced many engineering firsts: it developed the first undergraduate electrical engineering program in the nation and pioneered in the early development of curricula in industrial engineering, mechanical engineering, and engineering physics. In addition, Cornell was the first to award graduate degrees in engineering, granting the degree of Civil Engineer in 1870 and, in 1872, the first doctorate in civil engineering. The latter was the first Ph.D. awarded at Cornell in any graduate study. In 1885, the first Ph.D. in electrical engineering was granted, and in 1886, one of the first major national scientific fraternities, Sigma Xi, was founded here.

Today approximately 2,000 undergraduate engineers are enrolled in the various schools and departments of the College of Engineering. In addition, about 700 full-time students are working on advanced degrees in areas covering every portion of the engineering profession. Two hundred engineering faculty members, complemented by the faculties in the University's various mathematics and science departments, give strong support to all engineering students.

The rapid acceleration of the growth of modern science and technology poses a complex and exciting challenge for engineering education. Every division of the College is committed to offering the best possible undergraduate programs and to advancing graduate education and research; in this way, Cornell engineers are provided with the foundation essential for active and rewarding professional careers.

## ORGANIZATION OF THE COLLEGE

The College of Engineering offers degree programs at each of the following degree levels: Bachelor of Science, Master of Engineering, Master of Science, and Doctor of Philosophy.

### Undergraduate Curricula

An undergraduate student may develop a program of studies in any of the areas or fields listed below. With the exception of the field of agricultural engineering, all freshman and sophomore engineering students are enrolled in the Division of Basic Studies (see page 30) and must complete the requirements of that division before gaining formal admission to any other school or department in the College.

## BACHELOR OF SCIENCE DEGREE\*

*Agricultural Engineering*: a program administered jointly by the Colleges of Engineering and Agriculture. Students are enrolled in the College of Agriculture for the first three years, and during the fourth year in the College of Engineering (see page 25).

*Chemical Engineering* (see page 35).

*Civil Engineering* (see page 40).

*Electrical Engineering* (see page 50).

*Engineering Physics* (see page 56).

*Industrial Engineering/Operations Research* (see page 63).

*Materials Science and Engineering* (see page 68).

*Mechanical Engineering* (see page 74).

*College Program*: administered by the College Program committee of the College of Engineering. A flexible curriculum developed to encourage unique and well-defined objectives in engineering, not served by one of the aforementioned areas (see page 47).

## Graduate Curricula

The College of Engineering offers two distinct Masters' degree programs. One leads to a professional Master's degree, for example, Master of Engineering (Mechanical), and the other to a general degree (Master of Science).

Graduates intending to prepare for professional engineering careers in one of the several engineering fields generally seek the professional degree. Cornell's undergraduate field programs, coupled with a professional Master's degree, offer an integrated curriculum of three years, following completion of the two-year Basic Studies program, to those who seek professional competence.

The Master of Science programs are oriented to students seeking academic or research careers. Both the Master of Science and the Doctor of Philosophy degrees are under the jurisdiction of the University's Graduate School. The professional Masters' degrees are administered by the Engineering Division of the Graduate School unless noted otherwise.

## MASTER OF ENGINEERING DEGREES

*Aerospace Engineering*: administered by the Graduate School of Aerospace Engineering (see page 22).

*Agricultural Engineering* (see page 25).

*Chemical Engineering* (see page 35).

*Civil Engineering* (see page 40).

*Electrical Engineering* (see page 50).

*Engineering Physics* (see page 56).

*Industrial Engineering/Operations Research* (see page 63).

*Materials Science and Engineering* (see page 68).

*Mechanical Engineering* (see page 74).

*Nuclear Engineering* (see page 80).

\* All Bachelor of Science degrees described are granted by the College of Engineering.

## MASTER OF SCIENCE AND DOCTOR OF PHILOSOPHY DEGREES

For those general degrees, administered by the Graduate School of the University, the faculty is organized into "Fields of Instruction." Most of these Fields coincide with the respective engineering schools or departments. However, in some instances, the faculty is drawn from more than one college at Cornell, and are so indicated in the Fields listed below.

For each Field there is given below an approved list of titles from which candidates for advanced general degrees choose major and minor subjects. A prospective candidate is invited to write the Graduate Field Representative of the Field in question for detailed information on major and minor area offerings.

### AEROSPACE ENGINEERING

Aerospace Engineering, Aerodynamics.

### AGRICULTURAL ENGINEERING (with Agriculture)

Agricultural Engineering, Agricultural Structures, Electric Power and Processing, Power and Machinery, Soil and Water Engineering.

### APPLIED MATHEMATICS (with Arts and Sciences)

Applied Mathematics

### APPLIED PHYSICS (with Arts and Sciences)

Applied Physics.

### ASTRONOMY AND SPACE SCIENCES (with Arts and Sciences)

Astronomy, Astrophysics, Magnetohydrodynamics, Radiophysics, Space Sciences (General).

### CHEMICAL ENGINEERING

Biochemical Engineering, Chemical Engineering (General), Chemical Processes and Process Control, Materials Engineering, Nuclear Process Engineering.

### CIVIL ENGINEERING

Aerial Photographic Studies, Construction Engineering and Administration, Environmental Systems Engineering, Geodetic and Photogrammetric Engineering, Hydraulics and Hydrology, Sanitary Engineering, Soil Mechanics and Foundation Engineering, Structural Engineering, Transportation Engineering, Water Resources Engineering.

### COMPUTER SCIENCE (with Arts and Sciences)

Computer Science, Information Processing, Numerical Analysis, Theory of Computation.

### ELECTRICAL ENGINEERING

Electrical Engineering, Electrical Systems, Electrophysics.

### INDUSTRIAL ENGINEERING/OPERATIONS RESEARCH

Applied Statistics and Probability, Engineering Administration, Industrial Engineering, Information Processing, Operations Research, Systems Analysis and Design.

**MATERIALS SCIENCE AND ENGINEERING**

Materials and Metallurgical Engineering, Materials Science.

**MECHANICAL ENGINEERING**

Machine Design, Materials Processing, Thermal Power, Thermal Processes.

**NUCLEAR SCIENCE AND ENGINEERING (with Arts and Sciences)**

Nuclear Engineering, Nuclear Science.

**THEORETICAL AND APPLIED MECHANICS**

Fluid Mechanics, Mechanics of Materials, Solid Mechanics.

**WATER RESOURCES (with Agriculture, Arts and Sciences)**

Water Resources.

**THE ENGINEERING CAMPUS****Buildings and Laboratories**

Ten modern, spacious buildings bring teaching and research together in fourteen acres of floor space, and house the finest equipment. Several of these buildings have been gifts from distinguished Cornell alumni.

Complementing these new engineering facilities is a new physical sciences building, Clark Hall. Modernization and additional construction are under way on existing physics and chemistry facilities. All together, nearly twenty million dollars will have been spent by the University on strengthening its resources in the physical sciences by 1967. In addition, the construction of a new life sciences building has begun.

Descriptions of facilities for the instructional areas in the College are in the section "Areas of Instruction."

**Library Resources**

The engineering library, in Carpenter Hall, houses a collection of some 90,000 books and periodicals. Among the specialized holdings of the Engineering Library are a full depository collection of the U.S. Atomic Energy Commission and similar reports from about twenty foreign countries. The Kuichling Library of Sanitary Engineering includes reports of federal, state, and city health agencies and collected papers on water supply works in various cities. For patent research, the library maintains a file of the British patents and a set of the Official Patent Gazette of the U.S. Patent Office (patent abstracts). The library resources of the University total more than 3,000,000 volumes.

A special feature of the library in Carpenter Hall is the Browsing Room. Furnished as a club, this paneled room houses about 1,500

## 10 COMMON STUDIES CORE

selected books in the fields of the humanities and the social studies. It is designed to provide for students and faculty an inviting collection of cultural reading.

Allied and supporting literature in the basic sciences is to be found in the new physical sciences library in Clark Hall and in the mathematics library.

## UNDERGRADUATE DEGREE PROGRAM

The undergraduate degree of the College of Engineering is the Bachelor of Science, awarded upon the completion of four years of study. The student reaches this degree by spending his first two years in the Division of Basic Studies preparing for his entry into one of seven Field Programs or the *College Program*, where he will spend two years completing the requirements for his undergraduate degree. He then will go on to graduate study or will seek employment.

Students intending to engage in the practice of professional engineering will be encouraged to continue their studies for one additional year beyond the Bachelor's degree, and will receive a professional Master's degree. This is an integrated undergraduate-graduate program which accounts for the somewhat shorter period of time required to earn both degrees.

The purposes of the undergraduate program in Engineering at Cornell are to provide an educational basis which will support the increasing range of activity undertaken by engineers in all forms of human endeavor, and to accommodate the rapid change taking place in all the established fields of engineering.

Cornell's programs reflect the nationwide trend toward graduate and advanced study in engineering. They provide flexibility for responding to the enormous and changing demands on engineering education and engineering practice. At the same time Cornell retains one of the features for which it has long been recognized — strong programs leading to practice in the major fields of professional engineering.

## COMMON STUDIES CORE

One of the goals of the curricula is to foster the development of a sound education which can be directed toward a wide choice of careers in engineering and applied science. Studies during the junior and senior years, as well as subsequent graduate work in the College, complement the course work included in the core. Two-thirds of the credit hours in the College's undergraduate programs are included in this core, with the remainder devoted to the development of a specific educational goal in either one of several Field Programs or the *College Program*. (The Field Programs are described on pages 33–34, and the *College Program* is described on page 47.)

All freshmen undertake a common program of studies, except for those who obtain advanced placement. Mathematics, physics, chemistry, and a liberal studies elective are included in the freshman year. In addition, one introductory engineering course taught by members of the engineering faculty is offered each term. One of these introduces fundamentals of engineering graphics and the role that the design function plays in modern engineering. The other course stresses the functions of modern engineering, the nature of engineering and the interrelationships of several professional fields. Freshmen learn CORC, the Cornell computing language, while enrolled in this latter course, and make subsequent use of it in their mathematics, science, and engineering courses. Both of these introductory courses encourage close student-faculty association. Advisers drawn from the College's faculty provide another opportunity for students to become more acquainted with the many opportunities open to them in the Cornell programs.

During the sophomore year the core includes further work in mathematics and physics and a liberal studies course in each term for all students. To round out the sophomore year, two engineering science courses are chosen by a student each term. It is intended that these serve as the mechanism linking his work in mathematics and sciences with studies in the upperclass engineering program.

After completing the sophomore year, a Cornell engineering student may enroll in one of the several Field Programs or the *College Program*. In either option, he continues work in the core by including two additional engineering sciences, twelve credit hours of liberal electives and six credit hours of unspecified electives during his junior and senior years.

At present, Field Programs are offered in agricultural, chemical, civil, electrical, and mechanical engineering, and industrial engineering/operations research, engineering physics, and materials science and engineering. To prepare for entry into one of these fields, the student would select the appropriate engineering science courses during the sophomore year (see the Basic Studies curriculum, page 30). Approximately 30 percent of the four-year program is devoted to professional studies of a chosen field.

At the completion of the four-year Field Program, a graduate may be admitted to the College's professional Master's degree program, earning that degree in one additional year. The professional Master's degree program represents the level at which graduates will be prepared to seek *professional* engineering employment. The degree includes advanced work in a field begun formally during the junior year and represents a three-year program of integrated studies particularly suited to the requirements in modern industry.

Individuals seeking careers in research in applied science or in a specialized engineering area, such as sanitary engineering within civil engineering, can apply for the Master of Science or the Ph.D. program at the end of the four-year Bachelor's program. Some students may want to undertake graduate or professional study in other fields such as law, business, public administration, or medical research. It will be their decision as to which level of preparation they seek in engineering — the

Bachelor of Science or professional Master's—before embarking on other studies. The Bachelor of Science degree in a Field Program may be the terminal point in the formal education of some students; however, it is expected that most will seek to continue studies beyond this stage.

## THE INDUSTRIAL COOPERATIVE PROGRAM

During the fourth term, an above-average student who intends to pursue a program in electrical, industrial, or mechanical engineering, or engineering physics, may apply for admission to the Industrial Cooperative Program.

If accepted in that program he will have an opportunity to gain practical experience in his chosen field, which can be of value to him in planning his program and carrying out his studies. In addition, he earns a substantial salary during his periods of employment, and also gains about a year in the amount of responsibility he will be prepared to undertake upon graduation.

By utilizing the summers following his second, third, and fourth years, the student is able to complete the academic requirements for his Bachelor's and Master's degrees, pursue his work program totaling nearly one year in industry, and still graduate with his class on time. He is on campus with his regular classmates except during the fifth term.

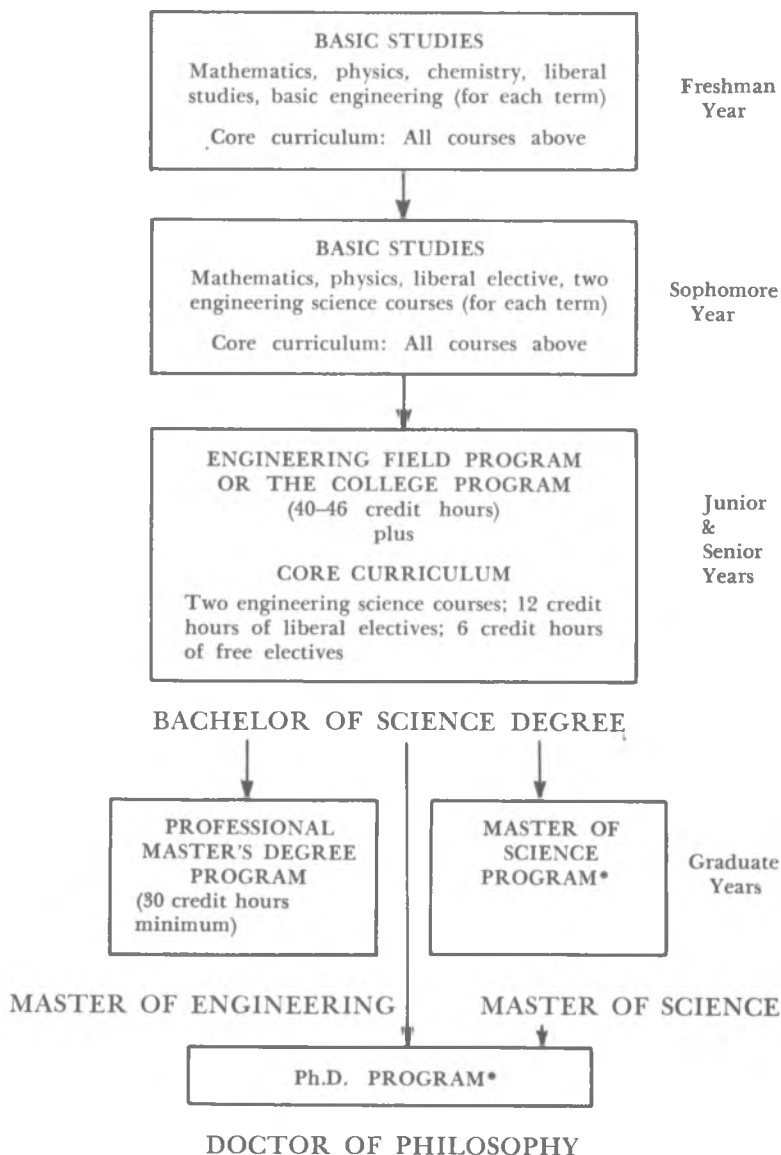

The schedule for the Cooperative Program, beginning after the fourth term, is as follows:

Summer:	Fifth term courses
Fall:	Industry
Spring:	Sixth term courses
Summer:	Industry
Fall:	Seventh term courses
Spring:	Eighth term courses
(Award of B.S. Degree)	
Summer:	Industry

Students who seek a Master's degree are able to begin graduate study in the fall following receipt of the Bachelor's degree, just as in the regular program.

The work program of each participant is arranged to advance his individual interests and aptitudes within the regular activity of the company with which he is affiliated. Because the plan involves progression from less demanding assignments through to development, research, and other more advanced responsibilities, it is not feasible for any one student to work in more than one company. He is therefore admitted to the program by arrangement with one company and is in their employ throughout the program. Neither the student nor the company, however, is obligated in any sense for employment beyond the completion of the Industrial Cooperative Program.

# SUMMARY OF DEGREE REQUIREMENTS FOR B.S., M.ENG., M.S., AND Ph.D.

\* Consult the *Announcement of the Graduate School: Physical Sciences* for detailed requirements for the M.S. and Ph.D. degree programs.

## 14 ADMISSION AND REQUIREMENTS

Among the companies presently participating in the Program are American Electric Power Service Corporation, Anaconda Wire and Cable Company, Campbell Soup Company, Cornell Aeronautical Laboratory, The Emerson Electric Manufacturing Company, The Farrel Corporation, General Electric Company, General Radio Company, Gleason Works, Hewlett-Packard Company, Humble Oil and Refining Company, International Business Machines Corporation, Pall Trinity Micro Corporation, Raytheon Manufacturing Company, United Airlines, and Xerox Corporation.

Further information is available from the Industrial Cooperative Program Office, 109 Phillips Hall.

## ADMISSION

Detailed information concerning the methods and procedures of undergraduate admission is given in the *Announcement of General Information*.

## REQUIREMENTS FOR ADMISSION AS AN UNDERGRADUATE

### Secondary School Credits

Sixteen units of college preparatory subjects are required. The following fourteen units must be included:

<i>Subject</i>	<i>Units*</i>
English .....	4
History .....	2
One foreign language .....	2
Algebra (elementary and intermediate) .....	2
Plane geometry .....	1
Trigonometry .....	$\frac{1}{2}$
Advanced algebra or solid geometry .....	$\frac{1}{2}$
Chemistry .....	1
Physics .....	1

\* A unit is one year of study, made up of 120 hours of classroom work; that is, a minimum of 160 class periods if each is forty-five minutes long.

### College Board Tests

The Scholastic Aptitude Test of the College Entrance Examination Board is required of all freshman applicants. In addition, Achievement Tests in mathematics (Level I or Level II) and in chemistry or physics

are required of all applicants, to be taken *not later than January* of their last year in secondary school. Generally, it is recommended that the Achievement Test in science be taken in May of the junior year, in that science in which the applicant is enrolled. The admissions committee will, however, consider any Achievement Test in science which is taken in December or January of the senior year for a course completed in the junior year, or earlier, or for a course currently in progress.

## Other Factors

Applicants will be admitted to the College of Engineering who, in all essential respects, have demonstrated a high order of scholastic achievement and who, so far as can be determined, have a well-considered desire to study engineering. They must possess positive characteristics of work and study and the maturity necessary to meet the demands of living successfully in an active and stimulating university environment. Good grades or high College Board scores are in themselves no guarantees of success or even of admission. High motivation and the desire to succeed are equally important.

## Advanced Placement

Through cooperation with the advanced placement program of the College Entrance Examination Board and departmental tests given during the fall orientation period, normally one-fifth of the class is given advanced placement or actual college credit for one or more courses of the freshman year. This makes possible more individual development toward a broader liberal program or advanced technical study in line with the student's own inclination. Superior students, who have achieved advanced placement in mathematics and in either chemistry or physics upon graduation from high school, may find it possible to enroll at the sophomore level if they attend the University summer session preceding September matriculation and take the other science. Students with superior performance in the freshman year are encouraged to enroll in honors sections at the sophomore level.

## Transfer and Special Students

Students desiring to transfer to the College of Engineering from another Cornell division or from another university or college and who have the equivalent of two or fewer years of applicable college credit, are invited to communicate with the Director of Engineering Admissions, Carpenter Hall.

In exceptional cases, individuals who do not wish to become candidates for any of the undergraduate degrees may be admitted to the

College of Engineering as special students. Prospective students who cannot meet the entrance requirements or who do not wish to spend the required time to complete the course must have had some engineering training, and must satisfy the prerequisites for the courses they wish to take. Others with a baccalaureate degree wishing to pursue further work at the undergraduate level may also be admitted as special students. In either instance, individuals should write to the director of the professional school to which they want to be admitted as special students.

Applications for admission and general University information may be obtained by writing the Office of Admissions, Edmund Ezra Day Hall.

## REQUIREMENTS FOR ADMISSION TO THE GRADUATE DEGREE PROGRAMS

A graduate student holding a baccalaureate or equivalent degree from a college or university of recognized standing may pursue advanced work leading to a graduate degree in engineering. Such a student may enter as a candidate either for the general degrees (M.S. or Ph.D.) or for the professional engineering degrees—Master of Engineering (Aerospace, Agricultural, Chemical, Civil, Electrical, Engineering Physics, Industrial, Mechanical, Materials, or Nuclear).

### General Degrees

The M.S. and Ph.D. degrees are available in all fields and subdivisions of the College of Engineering. They are administered by the Graduate School and require work in both major and minor fields of study, as well as the completion of a satisfactory thesis, usually involving individual and original research. A prospective graduate student interested in obtaining an M.S. or Ph.D. degree should consult the *Announcement of the Graduate School* for additional information concerning these degrees and should correspond with the professor supervising the particular field of engineering representing his major interest. Students who do not completely meet the entrance requirements for these degrees may be admitted as provisional candidates or without candidacy, according to previous preparation, but they must in all cases hold a baccalaureate or equivalent degree.

### Professional Masters' Degrees

Professional degrees at the Master's level are offered in aerospace, agricultural, chemical, civil, electrical, industrial engineering/operations research, materials science and engineering, mechanical, and nuclear engineering, and in applied physics. All except the degree in aerospace engineering are administered by the Engineering Division of the Grad-

uate School. The Master of Engineering (Aerospace) degree is granted on the recommendation of the faculty of the Graduate School of Aerospace Engineering; prospective candidates for this degree should apply directly to the Director of the Graduate School of Aerospace Engineering.

These degrees are intended primarily for persons who wish to enhance their ability in the practice of engineering, and not for those who expect to enter engineering teaching or research. The student with a baccalaureate degree in the area of engineering or science deemed appropriate to his proposed field of study may become a candidate for a professional degree.

The professional degrees require a minimum of thirty credit hours of graduate-level work in the principles and practices of the specific field. They do not require the presentation of a thesis based upon research studies; however, they require from three to twelve credit hours of individual work in some aspect of engineering design, including submission of a formal report. Each program also requires completion of a curriculum of related technical courses, differing in content among the several professional degrees. Each curriculum includes some prescribed and some elective courses, with considerable flexibility to permit adaptation to the special needs of the individual student.

Further information and application forms may be obtained by writing to Graduate Professional Programs, College of Engineering, 221 Carpenter Hall.

## EXPENSES AND FINANCIAL AID

### EXPENSES

For information on tuition, fees and what they cover, method of payment, refunds, estimates of total expenses, and for other matters of general interest, consult the *Announcement of General Information*.

### UNDERGRADUATE FINANCIAL AID

Scholarships, loans, and employment are available in substantial amounts to aid students in meeting the cost of their education. Nearly a quarter of a million dollars is awarded annually by the University to engineering freshmen alone. Recently over 65 percent of all undergraduate engineering students have held scholarships or grants-in-aid, exclusive of loans.

Freshmen seeking financial assistance file a single application with the University Office of Scholarships and Financial Aid. Those who receive scholarships administered by the College of Engineering should deal directly with the Office of Student Personnel of the College of Engineering on any question relating to these awards. Specifically, these

are the scholarships awarded to incoming freshmen which they may continue to hold throughout their college course.

Upperclassmen with financial need, who did not receive Cornell awards at the time of entrance, should initiate all applications for financial aid with the Office of Scholarships and Financial Aid, Day Hall. A booklet listing all scholarships and loans available to students is published by that office. Upperclassmen who thus apply for financial assistance will be interviewed by scholarship committees before awards are made, but their applications must originate with the Office of Scholarships and Financial Aid.

## GRADUATE FINANCIAL AID

Financial aid to graduate students is available in several forms: fellowships and scholarships, research or teaching assistantships, residence hall assistantships, and loans.

Graduate students whose major subjects are in the various branches of engineering and who wish to be candidates for scholarship or fellowship aid should consult the *Announcement of the Graduate School* and make application to the Dean of the Graduate School. Those who are candidates for the professional degrees should apply to the director of the appropriate field. Information relating to application for the other forms of financial aid mentioned above will also be found in the *Announcement of the Graduate School*.

## STUDENT LIFE AT CORNELL

### HOUSING

University residence halls, located a convenient distance from academic buildings, libraries, and other campus facilities, provide accommodations for approximately 2,000 undergraduate men. Nearly all freshmen reside in dormitories; upperclassmen may reside either in dormitories, in fraternity houses, or in off-campus rooms or apartments. Dining facilities are provided in several locations throughout the campus.

Housing facilities for undergraduate women, graduate students, and married students are also available. Consult the *Announcement of General Information* for further details.

### UNIVERSITY ACTIVITIES

Cornell offers students the opportunity to participate in a varied program of extracurricular activities. Something can be found to meet nearly every interest, including student government, athletics, publications, music, dramatics, and various social and cultural organizations.

The intercollegiate athletic program is the largest in the country, with competition in twenty-two sports. In addition, the various athletic facilities are available for intramural and informal competition.

Throughout the year, there are several opportunities to hear lectures by distinguished visitors to the campus. Concerts and dramatic performances are offered, both by University groups and by outside artists. Art of various forms is on display at the Andrew Dickson White Museum of Art and at the Art Room of Willard Straight Hall.

Cornell students publish a full-scale, daily newspaper, the *Cornell Daily Sun*, a yearbook, and several literary and humor magazines. The campus radio station, WVBR, is operated entirely by students.

There are international and political clubs, service clubs, professional and departmental societies, and clubs devoted to a wide assortment of hobbies.

**RELIGIOUS AFFAIRS.** Although Cornell has been a nonsectarian institution from its founding, it has a center for the coordination and sponsorship of religious activities. A staff of twelve University chaplains represent the major religious denominations. Thus facilities and personnel for religious study, worship, counsel, and fellowship are available. In addition, each Sunday distinguished visiting clergymen from throughout the world conduct interdenominational services in Sage Chapel.

**HEALTH SERVICES.** Health services and medical care are available at Cornell's Gannett Clinic and Sage Hospital (a fully accredited hospital). Student fees cover treatment and care at the Clinic and Hospital, with up to two weeks of hospitalization per term. Consult the *Announcement of General Information* for details.

**PHYSICAL EDUCATION.** All freshmen and sophomores are required to take physical education. The freshman program includes activity in each of six sports, while in the sophomore year a student concentrates on one or two sports.

**OFFICER EDUCATION.** The Army, Navy, and Air Force all offer ROTC programs at Cornell. Participation is voluntary, and successful completion of the program results in a commission in the chosen service. For further information, consult the *Announcement of Officer Education*.

**HONOR SOCIETIES.** Engineering students may qualify for membership in local and national honor societies, including Tau Beta Pi, Phi Kappa Phi, Sigma Xi, Pi Tau Sigma, Chi Epsilon, Rod and Bob-Pyramid, Atmos, Kappa Tau Chi, and Eta Kappa Nu.

**STUDENT PUBLICATION.** The *Cornell Engineer*, a magazine containing articles of professional interest for engineering students and alumni, is published throughout the academic year by undergraduates of the College of Engineering.

**ENGINEERING SOCIETIES.** Many meetings of the American Society of Civil Engineers, American Institute of Industrial Engineers, American Society of Mechanical Engineers, American Institute of Electrical Engineers, Society of Automotive Engineers, and Institute of Electrical

## 20 STUDENT PERSONNEL SERVICES

and Electronic Engineers are held on campus and are attended by students. The College also maintains active student branches of these societies, as well as of the American Institute of Chemical Engineers, American Society of Agricultural Engineers, and the American Institute of Aeronautics and Astronautics. The Cornell Metallurgical Society was formed in 1949 and is an affiliate of the American Institute of Mining and Metallurgical Engineers. A student branch of the American Nuclear Society was founded in 1959.

**ENGINEERING STUDENT COUNCIL.** The Engineering Student Council, consisting of elected student representatives from each division of the College, plans the annual Engineers' Day program for high school visitors to the campus and represents student viewpoints in campus affairs. Upperclassmen on the Council have participated in an informal tutoring program for freshmen desiring such assistance.

## STUDENT PERSONNEL SERVICES

### Advising and Counseling

The University provides extensive personnel services and counseling facilities for all students. Among these are the Office of the Dean of Students, the University Health Services, the Reading and Study Skills Center, the Educational-Vocational Guidance Office, Cornell United Religious Work, the University Placement Service, and the Office of Scholarships and Financial Aid.

For planning and scheduling his academic work each engineering student is assigned an adviser. The adviser should usually be the first person seen in all matters of student counseling, and should always be consulted on questions of curriculum, academic standards, or scholastic performance. In addition, students are free to consult with the dean, directors, and other faculty members on any educational or personal matters.

The Office of Student Personnel, 221 Carpenter Hall, is the focal point in the College for the admission of freshman students, the administration of the engineering scholarship funds, the placement of graduating students, and the compilation and maintenance of alumni records. It is a source of information on all personnel services to students, and any student is welcome to consult the Director of the Office on non-academic matters. Special provision is made for questions relating to financial aid and placement.

### Placement

The facilities of the University Placement Service are available to all engineering students for summer and permanent employment. The Office of Student Personnel, in cooperation with the Placement Service, annually arranges interviews between students and prospective employ-

ers. Members of the engineering faculty are assigned as placement advisers with whom students may discuss their career objectives, whether for employment or graduate study. Information about companies is available both in the Placement Service and the Office of Student Personnel, and students may discuss specific employment opportunities and the procedures of job placement with the staff of either office.

## AREAS OF INSTRUCTION

### AEROSPACE ENGINEERING

**DEGREES OFFERED:** Master of Engineering (Aerospace); Master of Science; Doctor of Philosophy.

#### GRUMMAN HALL

Mr. E. L. Resler, Jr., Director; Messrs. P. L. Auer, P. C. T. deBoer, A. R. George, L. F. Henderson, W. R. Sears, A. R. Seebass III, S. F. Shen, D. L. Turcotte.

Aerospace engineering deals with problems concerned with the flight of aircraft, guided missiles, and space vehicles in planetary atmospheres and in the regions of space adjoining these atmospheres. The primary objective of the Graduate School of Aerospace Engineering is to educate selected engineering and science graduates in the research and technical aspects of this Field. The training is intended especially to prepare students for research and development engineering in the aerospace industry and in allied research institutions, and for university teaching and research.

Superior facilities are provided for laboratory studies in fluid mechanics, aerodynamics, gasdynamics, plasma physics, high temperature chemical kinetics, rarefied gas dynamics, magnetohydrodynamics, and other areas. Students and staff also carry out highly theoretical investigations in such subjects of their own choice in the aerospace field or in subjects related to the above experimental areas. Emphasis is put on the scientific and engineering aspects of the phenomena encountered by space vehicles which leave and re-enter planetary atmospheres at extreme speeds. Research work may also be carried out in other related disciplines of mutual interest to the student and advising professors.

### Preparation for Graduate Study

The Graduate School of Aerospace Engineering will admit students who hold baccalaureate degrees (or equivalent) in any branch of engineering, mathematics, or the physical sciences from qualified institutions, provided that their undergraduate scholastic records are such as to indicate ability to successfully pursue graduate study. The Cornell courses of study in engineering physics, electrical engineering, and mechanical engineering are especially recommended to students who expect to enter this School after graduation.

All students who expect to enter the Graduate School of Aerospace Engineering should try to arrange their undergraduate programs to include as much work as possible in applied mechanics, thermodynamics, mathematical analysis, chemistry, and physics. Suggested courses for engineering students to elect as preparation for graduate work in aerospace engineering include areas of intermediate or advanced physics, such as atomic and molecular physics, kinetic theory of gases, electricity and magnetism, etc.

## The Degree Programs

### MASTER OF ENGINEERING (AEROSPACE)

Undergraduate students who have demonstrated more than average ability, have shown adequate promise for carrying on graduate study, and are interested in extending their education in the aerospace field by training in advanced analytical and research-oriented aerospace subjects are eligible to apply for this program.

Applications for admission should be made to the Director of the Graduate School of Aerospace Engineering, Grumman Hall, Cornell University. A special application blank for this purpose can be obtained from the Director's office. It should be returned directly to him. Candidates for an advanced degree in this field who do not already hold the Master's degree are encouraged to matriculate first as candidates for this degree. It is not recommended that candidates apply for admission at midyear, except in very unusual circumstances.

The program of aerospace engineering studies is designed to acquaint the student with pioneering engineering work in the aerospace industry, and, beyond that, its objective is to increase the student's facility in the use of the basic sciences in engineering and to stimulate his growth in independent research and development work. Because progress in this field is so rapid, an essential objective of this program is to go beyond the study of present-day practices and techniques and to supply the student with a fundamental background and analytical techniques that generally will prove useful whatever the direction of modern engineering development.

The successful completion of the work for this degree requires that the student pass a series of courses or examinations in the subjects listed below. The subject list constitutes a standard of accomplishment for the M.Eng. (Aerospace) candidate, but the faculty may modify the list to suit the needs, interests, and background of each individual candidate. Courses are currently available to permit candidates to study in any of five areas of aerospace engineering: (1) fluid mechanics; (2) high temperature gasdynamics; (3) magnetohydrodynamics; (4) space mechanics; and (5) aerospace structures. Active research in these areas is being carried out in the School. Other course sequences leading to specialization in allied fields can also be arranged, for example, space power, aerophysics, chemical kinetics, etc. Faculty members and visiting staff frequently offer additional courses (besides those listed on pages 24-25) in their specialty.

The M.Eng. (Aerospace) is awarded for course work only and requires successful completion of two six-hour sequences from those listed below, six hours of mathematics (1180-81, or 415-416, or equivalent), six hours of electives, attendance at the weekly colloquium, and one advanced seminar (two hours) each term. This is a total of thirty credit hours. Exceptions in rare instances may be made at the discretion of the faculty.

## Course Sequences Available for M.Eng. (Aerospace)

	<i>Hours</i>
7101-02, Advanced Kinetic Theory, Gasdynamics .....	6
7201-02, Introductory Plasmadynamics, Introductory Magnetohydrodynamics .....	6
7301-02, Fluid Mechanics, Aerodynamics 1171, 1172, Artificial Satellite Theory, Space Flight Mechanics	6
2730, 2731, Aerospace Structures .....	6

### Electives: List A \*

7103, Dynamics of Rarefied Gases .....	3
7104, Advanced Topics in High Temperature Gasdynamics .....	3
7203, Intermediate Plasma Physics .....	3
7303, Compressible Fluid Flow .....	3
7304, Theory of Viscous Flows .....	3
7305, Hypersonic Flow Theory .....	3

\* Basic sequence (01-02) or equivalent is required for registration in elective courses in List A.

### Electives: List B

1162, Theory of Vibration .....	3
1163, Applied Elasticity .....	3
1164, Theory of Elasticity I .....	3
1165, Theory of Elasticity II .....	3
1167, Theory of Plate and Shell Structures .....	3
1170, Advanced Dynamics .....	3
1175, Oscillations in Nonlinear Mechanics .....	3
3652, Combustion Theory .....	3
3674, Statistical Thermodynamics .....	3
3681, Radiative Transfer .....	3
Physics 443, Atomics and Introductory Quantum Mechanics ....	4
Physics 444, Nuclear and High-Energy Particle Physics .....	4
Physics 454, Introductory Solid State Physics .....	4
Physics 510, Advanced Experimental Physics .....	3
Physics 561, Theoretical Physics I .....	4
Physics 562, Theoretical Physics II .....	4
Physics 572, Quantum Mechanics .....	4
Physics 574, Intermediate Quantum Mechanics .....	4
Chemistry 580, Kinetics of Chemical Reactions .....	4
Chemistry 593, Quantum Mechanics I .....	4
Chemistry 596, Statistical Mechanics .....	4
Chemistry 598, Selected Topics in Physical Chemistry .....	2 or 4
4511, Electromagnetic Theory .....	3
4531, Quantum Electronics I .....	3

	<i>Hours</i>
4532, Quantum Electronics II .....	3
4561, Plasma Physics I .....	3
4562, Plasma Physics II .....	3
4661, Kinetic Equations .....	3
4662, Kinetic Theory of Plasmas .....	3

## M.S. AND PH.D. DEGREES

To do original work in aerospace engineering in its broadest sense requires further advanced study in the Field, plus a thesis. Such study may lead to the degrees of Master of Science or Doctor of Philosophy. The student usually works very closely with the faculty members of the School in areas such as basic plasma dynamics, high temperature chemical reactions, space mechanics problems, fundamental fluid mechanics, etc. The programs are extremely broad in order to accommodate the widest interests of the students and the broadest needs of the industry.

The School's activities are best summarized through its research work and published papers. Those interested in obtaining copies or abstracts of work recently completed may obtain them by writing to the Director of the School, Grumman Hall.

## AGRICULTURAL ENGINEERING

**DEGREES OFFERED:** Bachelor of Science; Master of Engineering (Agricultural); Master of Science; Doctor of Philosophy.

### RILEY-ROBB HALL

Mr. O. C. French, Director; Messrs. R. D. Black, J. R. Cooke, W. W. Gunkel, R. B. Furry, G. Levine, R. T. Lorenzen, D. C. Ludington, W. F. Millier, N. R. Scott, E. S. Shepardson, J. C. Siemens, J. W. Spencer.

A joint program administered by the Colleges of Agriculture and Engineering leads to the degree of Bachelor of Science. Students in this curriculum register in the College of Agriculture during the first three years but take courses in the Colleges of Engineering, Arts and Sciences, and Agriculture. Registration for the fourth and final year is in the College of Engineering, which grants the degree.

The purpose of this curriculum is to prepare engineers for a career in one of the many industries and agencies that supply the great variety of products, machines, and services required by commercial farms, or those which process, handle, and distribute the products from farms.

Riley-Robb Hall with over 100,000 square feet of floor area provides excellent classroom and laboratory facilities for both teaching and research. Major items of laboratory equipment include electric dynamometers, universal testing machines, fluid flow demonstration and metering equipment, strain measurement instruments, digital recording

## 26 AGRICULTURAL ENGINEERING

equipment, torque meters, high speed camera and film analysis equipment, modern farm machines, power units and materials handling equipment, soil properties and moisture determination apparatus, and complete machine shop facilities.

The department has an extensive research program supported through the Cornell Agricultural Experiment Station which provides many students with opportunities for part-time work during the academic year and summer periods.

### Practice Requirement

Since agricultural engineering students are registered in the College of Agriculture for the first three years, they must meet the practice requirement of that College. The basic requirement is thirteen units of acceptable farm experience gained at the approximate rate of one unit per week. Eight of these units must be completed before registration for the sophomore year. The entire thirteen units must be completed prior to registration in the third year. *The Announcement of the College of Agriculture* should be consulted for details of the requirement.

### Scholastic Requirements

To remain in good standing, a student must have a weighted average for the term of C minus (1.7 quality points) or above.

### The Degree Programs

#### BACHELOR OF SCIENCE

(For a complete description of the courses in agriculture, consult the *Announcement of the College of Agriculture*.)

	Contact Hours

## MASTER OF ENGINEERING (AGRICULTURAL)

The degree of Master of Engineering (Agricultural) is available as a curriculum type of professional degree, intended primarily for those students who plan to enter engineering practice, and not for those who expect to study for the doctorate. This program consists of courses which are intended to develop the student's background in engineering design as well as strengthen his fundamental engineering base. Six hours, of the required thirty hours, consist of engineering design experience involving individual effort and a formal report. Admission to the Master of Engineering (Agricultural) program is open to persons who have been granted Bachelor's degrees, or the equivalent and who have sufficient training to indicate that they can profitably study the advanced courses offered in the program. A student can choose to concentrate his studies in one of the sub-areas of agricultural engineering or take a broad program without specialization. The sub-areas are: (a) power and machinery, (b) soils and water engineering, (c) agricultural structures and associated systems, and (d) electric power and processing.

Engineering electives are chosen from among subject areas relevant to agricultural engineering such as thermal engineering, mechanical design and analysis, theoretical and applied mechanics, structural engineering, hydraulics, sanitary engineering, and soil engineering.

## M.S. AND PH.D. DEGREES

Flexible programs leading to both the M.S. and Ph.D. are offered in the following areas of specialization for either a major or minor: agricultural structures, power and machinery, soil and water engineering, and electric power and processing. Minors for those majoring in agricultural engineering may be selected from the engineering, agricultural, or basic sciences. A broad and active research program, supported by the Cornell Agricultural Experiment Station, gives the

student an opportunity to select a challenging research project for his thesis. Several assistantships are available with annual stipends that are comparable to those offered at other Land Grant institutions. For more detailed information write the Graduate Field Representative, Riley-Robb Hall, Cornell University.

## BASIC STUDIES DIVISION

**DEGREES OFFERED:** This Division is responsible for the freshman and sophomore curricula in the College.

### HOLLISTER HALL

Mr. H. G. Smith, Director.

Freshmen in the College of Engineering are enrolled for the first two years of their undergraduate program in the Division of Basic Studies of the College of Engineering. The Division is responsible for admissions to the College at the underclass level, administers a program of courses for freshmen and sophomores, and assigns each engineering underclassman a senior member of the College of Engineering faculty as his adviser.

The freshman year program includes studies in mathematics, physics, chemistry, and a liberal elective. Through contact with senior engineering staff, both as advisers and in class discussions in the freshman introductory courses, the student is made more fully aware of the range of opportunities in the engineering profession. Understanding graphics as a form of technical communication and the use of modern digital computing machines are particular skills developed in all freshman engineering students.

During the sophomore year, the engineering student continues his work in mathematics and physics and begins to integrate these sciences with two engineering science courses taught by members of the faculty of the College of Engineering. Included also is a liberal studies elective (liberal studies constitute approximately one-fifth of the engineering curriculum at Cornell). Students who anticipate enrollment in chemical engineering establish earlier chemistry sequences during their sophomore program.

Most students begin to select their upperclass objectives before the beginning of the fall term of their sophomore year. Each professional school specifies two engineering science courses. This requirement may alternatively be taken either during the fall and spring terms of the sophomore year or in the spring term and summer session preceding the junior year. Through these options, a student still has a choice among several engineering fields as late as the beginning of the junior year.

If a student expresses interest in a particular branch of engineering at the outset, he will be assigned to a faculty adviser whose major interest is in that field. Otherwise, after he determines his field of study he may change his adviser to obtain the counsel of a faculty member in his chosen field.

## Honors Sections and Advanced Placement

Through cooperation with the advanced placement program of the College Entrance Examination Board and departmental tests given during the fall orientation period, students are enrolled in course sections consistent with their individual level of preparation. Approximately one-fifth of the entering class is given advanced placement or actual college credit for one or more courses of the freshman year. This makes possible more individual development toward a broader liberal program, or advanced technical study in line with the student's own inclination.

Superior students who have achieved two terms of advanced placement in mathematics and in either chemistry or physics upon graduation from high school, may find it possible to enroll as a sophomore by completing the other science course prior to their enrollment at the University in September. Students with superior performance in the freshman year may enroll in sophomore honors sections.

## Scholastic Requirements

The Division of Basic Studies of the College of Engineering normally enrolls all students for five courses each term. All of these must be passed with an average of C or better, in order to remain in good standing in the Division. All engineering students are required to complete twenty-four hours of liberal studies before graduation; twelve hours of liberal electives must be completed by students in this Division as part of this College requirement.

## Freshman Year

Freshman students entering the College of Engineering in the fall of 1967 will take the following program of courses:

	<i>Contact Hours</i>		
	<i>Credit Hours</i>	<i>Lec. Rec.</i>	<i>Lab. Comp.</i>
<b>FIRST TERM</b>			
Mathematics 191 or 193, Calculus for Engineers .....	4	3	2
Physics 121, Introductory Analytical Physics	3	3	2
Chemistry 107A or 107B, General Chemistry or	3	2	3
Chemistry 115, General Chemistry and In- organic Qualitative Analysis .....	4	3	3
Liberal Elective .....	3	3	0
Engineering 103, Engineering Graphics .... or	3	2	2½
Engineering 104, Introduction to Engineering .....	3	2	2½

	<i>Contact Hours</i>		
	<i>Credit Hours</i>	<i>Lec. Rec.</i>	<i>Lab. Comp.</i>
<b>SECOND TERM</b>			
Mathematics 192 or 194, Calculus for Engineers .....	4	3	2
Physics 122, Introductory Analytical Physics	3	3	2
Chemistry 108, General Chemistry .....	4	3	3
or			
Chemistry 116, General Chemistry and In- organic Qualitative Analysis .....	4	2	6
Liberal Elective .....	3	3	0
Engineering 103, Engineering Graphics ....	3	2	2½
or			
Engineering 104, Introduction to Engineering .....	3	2	2½

In addition to these courses, all underclassmen must satisfy the University's requirements in physical education.

## Sophomore Year

All sophomore engineering students, except those planning to major in Chemical Engineering, will take the following program of courses:

### THIRD TERM

Mathematics 293 or 293H, Engineering			
Mathematics .....	4	4	0
Physics 233, Introductory Analytical Physics and	3	4	0
Physics 235, Introductory Analytical Physics, Laboratory .....	1	0	2
or			
Physics 237, Introductory Analytical Physics, Honors .....	4	4	2½
Liberal Elective* .....	3 or 4	—	—
Engineering Sciences (two of following) ....	6 or 7	—	—
Materials Science 6210 .....	(3)	(2)	(2)
Electrical Science 241 .....	(3)	(3)	(0)
Mechanics 211 .....	(4)	(3)	(2½)

FOURTH TERM	Contact Hours		
	Credit Hours	Lec. Rec.	Lab. Comp.
Mathematics 294 or 294H, Engineering			
Mathematics .....	3	3	0
Physics 234, Introductory Analytical Physics and	3	4	0
Physics 236, Introductory Analytical Physics, Laboratory .....	1	0	2
or			
Physics 238, Introductory Analytical Physics, Honors .....	4	4	2½
Liberal Elective* .....	3 or 4	—	—
Engineering Sciences (two of following) ....	6 or 7	—	—
Materials Science 6211 .....	(3)	(2)	(2)
Electrical Science 242 .....	(3)	(3)	(0)
Mechanics 212 .....	(4)	(3)	(2½)

Each upperclass Field Program specifies two engineering sciences which must be successfully completed in order to enroll in the program at the beginning of the junior year. The specific Field Program requirements are as follows:

Civil Engineering .....	Mechanics 211–212 Materials Science 6210–6211
Electrical Engineering .....	Electrical Science 241–242 Mechanics 211–212
Engineering Physics .....	Electrical Science 241–242 Materials Science 6210–6211
Industrial Engineering and Operations Research .....	Any two Preferably Mechanics 211–212, Materials Science 6210–6211
Materials Science and Engineering .....	Mechanics 211–212 Materials Science 6210–6211
Mechanical Engineering .....	Mechanics 211–212 Preferably Materials Science 6210–6211

Mechanics, electrical science, and materials science will be offered from fall through summer: Mechanics 211 in the fall and spring, and Mechanics 212 in the spring and summer; Electrical Science 241 in the fall and spring, and Electrical Science 242 in the spring and summer; Materials Science 6210 in the fall and spring, and Materials Science 6211 in the spring and summer.

All sophomore engineering students indicating a preference for Chemical Engineering will take the following program of courses:

	<i>Contact Hours</i>		
	<i>Credit Hours</i>	<i>Lec. Rec.</i>	<i>Lab. Comp.</i>
<b>THIRD TERM</b>			
Mathematics 293 or 293H, Engineering Mathematics .....	4	4	0
Physics 233, Introductory Analytical Physics and	3	4	0
Physics 235, Introductory Analytical Physics, Laboratory .....	1	0	2
or			
Physics 237, Introductory Analytical Physics, Honors .....	4	4	2½
Chemistry 285, Introductory Physical Chemistry .....	5	4	6
Chemical Engineering 5101, Material and Energy Balances .....	3	3	2
Liberal Elective* .....	3 or 4	—	—

**FOURTH TERM**

Mathematics 294 or 294H, Engineering Mathematics .....	3	3	0
Physics 234, Introductory Analytical Physics and	3	4	0
Physics 236, Introductory Analytical Physics, Laboratory .....	1	0	2
or			
Physics 238, Introductory, Analytical Physics, Honors .....	4	4	2½
Chemistry 286, Introductory Physical Chemistry .....	5	4	6
Chemical Engineering 5102, Equilibria and Staged Operations .....	3	3	2
Liberal Elective* .....	3 or 4	—	—

\* Liberal electives include courses in social sciences, history, humanities, modern foreign languages, and expressive arts (courses such as accounting, management, and law excluded) chosen from a list approved by the Core Curriculum Committee. A total of twenty-four credit hours are reserved for liberal studies, and at least six of the credit hours in upperclass courses. No more than six liberal credit hours may be earned in a modern foreign language.

In addition to the twenty-four credit hours for liberal studies, there are six credit hours for free electives. To satisfy this requirement, a student may take any course at the University to which he can gain admission.

## CHEMICAL ENGINEERING

**DEGREES OFFERED:** Bachelor of Science; Master of Engineering (Chemical); Master of Science; Doctor of Philosophy.

### OLIN HALL

Mr. C. C. Winding, Director; Messrs. G. G. Cocks, V. H. Edwards, R. K. Finn, P. Harriott, J. E. Hedrick, J. P. Leinroth, F. Rodriguez, G. F. Scheele, J. C. Smith, R. G. Thorpe, R. L. Von Berg, H. F. Wiegandt, R. York.

Chemical engineering involves the application of the principles of the physical sciences, of mathematics, and of engineering judgment to fields in which matter is treated to effect a change in state, energy content, or chemical composition. Most chemical engineers are employed in the process industries. In these industries, raw materials are converted into useful products such as industrial chemicals, petroleum products, metals, rubbers, plastics, synthetic fibers, foods, paints, and paper.

Preparation for professional work in chemical engineering has always involved a five-year program at Cornell. The present program in which a student receives a B.S. degree at the end of four years and the degree M. Eng. (Chemical) at the end of the fifth year is based on over thirty years of experience with five-year programs. The curriculum that has evolved applies the latest developments in the fields of mathematics, chemistry, physics, and the engineering sciences to chemical engineering concepts in order to develop competence in professional work. Graduates of the five-year program are prepared to start their professional engineering careers or continue in graduate programs leading to doctoral degrees.

## Laboratory and Research Facilities

All Cornell programs in chemical engineering, both undergraduate and graduate, are given in Olin Hall of Chemical Engineering. This modern and well-equipped building, with over 100,000 square feet of floor space, provides lecture and recitation rooms as well as laboratories for instruction and research. The main laboratory extends through three floors and contains pilot-plant equipment for undergraduate projects and research as well as space for setting up research apparatus for graduate students. Shops, storage, and service facilities are adjacent to this laboratory.

In addition, a large portion of the building is devoted to small unit laboratories containing furniture and equipment suitable for the chemical and bench-scale projects and research carried out by both undergraduate and graduate students. Specialized laboratories are also available. The Geer Laboratory for Rubber and Plastics has facilities for making, processing, and testing all types of polymeric materials. The biochemical engineering laboratory contains equipment for fermentation and other biochemical processes. The process control area is equipped with control instruments, recorders, and computers. A large model shop is used to construct scale models of plant designs.

## The Degree Programs

The five-year professional program leading to the degree of Master of Engineering (Chemical) provides a coordinated sequence of chemical engineering courses starting in the second year and extending through the fifth year. Mathematics, physics, mechanics, and electrical science are common with the other divisions of the Engineering College, but the need for greater breadth and depth in chemistry requires additional courses taught by the chemistry department. The courses in chemical processes, materials science, and thermodynamics require sound preparation in chemistry and form an important part of specialized chemical engineering training.

Course programs for Terms 1 through 4, administered by the Division of Basic Studies, are described on pages 31-34. Although the student planning to enroll in the five-year professional chemical engineering program remains in the Division of Basic Studies for the first two years, and can transfer to other programs during that time, he selects chemical engineering at the end of the freshman year and registers for Chemistry 285, 286 and Engineering 5101, 5102 during the sophomore year.

### BACHELOR OF SCIENCE

	<i>Contact Hours</i>		
	<i>Credit Hours</i>	<i>Lec. Rec.</i>	<i>Lab. Comp.</i>
<b>TERM 5</b>			
Chemistry 357, Introductory Organic Chemistry .....	5	3	6

Engineering 5717, Process Control .....	3	2	2½
Chemical Engineering Elective .....	3	—	—
Technical Electives .....	3	—	—
<b>Total</b> .....	<b>15</b>		

## OPTIONS

Specialized work is offered in biochemical engineering, polymeric materials, process control, reaction kinetics, process and plant design, and process economics. The free electives in the seventh and eighth

terms and the nine credits of technical electives in the professional Master's degree program permit a student to select a maximum of fifteen credit hours in other divisions of the Engineering College or the University. This choice of electives at an advanced level allows students to arrange programs that are the equivalent of options in either the specializations mentioned above or in other fields such as nuclear engineering, industrial engineering, chemistry, economics, and business administration. The exact sequence of courses to be selected for advanced training is not specified, since it depends on the student's interests and capabilities.

### THE COLLEGE PROGRAM: MAJORS AND MINORS

Students pursuing the four-year *College Program*, described on page 47, may elect a major or a minor in chemical engineering. These majors and minors require a sequence of chemical engineering courses in the third and fourth years, plus the proper prerequisites, as specified by the student's adviser and the College Program Committee.

### PREDOCTORAL HONORS PROGRAM

The Predoctoral Honors Program is available to capable undergraduate students who intend to seek a doctorate. One of the prime objectives of this program is to minimize the time required to obtain this degree, thus increasing the number of Ph.D.'s available for teaching, research, and highly technical positions in industry.

Qualified undergraduates interested in this program may apply for admission during their third year. Evidence of initiative and research ability is required and is considered to be just as important as scholastic standing. Admission to this program must be approved by the faculty of the School, and a student's progress is reviewed at the end of each term.

Students in this program are expected to complete a Master of Science degree during their fifth year rather than the Master of Engineering (Chemical) program. During the fourth year, a research project is begun in place of the project-laboratory course which is required otherwise. This research continues throughout the fifth year to meet the thesis requirement for the M.S. degree. The electives available during the fourth and fifth year permit the completion of one Ph.D. minor and a start on the second minor. At the end of the sixth year, these students will have completed all the course work required for the Ph.D., and should have enough research experience to select and complete a Ph.D. thesis during the following fifteen months. If this program is followed successfully, the doctorate is achieved in three years and one summer beyond the Bachelor's degree. The actual courses required during the fourth year in the B.S. program and the fifth year leading to the M.S. are outlined below.

	<i>Contact Hours</i>		
	<i>Credit Hours</i>	<i>Lec. Rec.</i>	<i>Lab. Comp.</i>
<b>TERM 7</b>			
Engineering 5103, Chemical Engineering Thermodynamics .....	3	2	2

Engineering 5506, Advanced Transport Phenomena .....	4	4	0
Engineering 5900, Seminar .....	1	1	0
Minor Courses .....	6	—	—
<b>Total</b> .....	<b>14</b>		

In addition, students will continue their research project throughout terms 9 and 10. Credit hours and grades are not granted for thesis research.

## MASTER OF ENGINEERING (CHEMICAL), M.S., AND PH.D. DEGREES

A student holding a baccalaureate or equivalent degree in chemical engineering from a college of recognized standing may pursue advanced work leading to a professional degree, Master of Engineering (Chemical), or to the general degrees, M.S. or Ph.D., with majors in chemical engineering.

The professional Master's degree requires the successful completion of thirty credit hours of specified courses as outlined on page 16. This Master of Engineering (Chemical) degree is awarded for the successful completion of the five-year professional program in chemical engineering at Cornell, but students from other institutions may also be awarded this degree if they have the proper prerequisites and complete the required thirty credit hours. Cornell chemical engineering graduates who have completed the five-year program leading to a B.Ch.E. degree, and who have demonstrated aptitude for graduate work, may be awarded the Master of Engineering (Chemical) degree upon the successful completion of fifteen additional credit hours as specified by the faculty of the School of Chemical Engineering and approved by the Graduate Programs Committee of the College of Engineering.

The M.S. and Ph.D. degrees are administered by the Graduate School and require work in both major and minor fields of study, as well as the completion of a satisfactory thesis involving individual or original research or investigations. A student interested in these degrees should consult the *Announcement of the Graduate School*. For a description of the research interests of the staff of the School of Chemical Engineering, write the Graduate Field Representative in Chemical Engineering, Olin Hall.

## CIVIL ENGINEERING

**DEGREES OFFERED:** Bachelor of Science; Master of Engineering (Civil); Master of Science; Doctor of Philosophy.

### HOLLISTER HALL

Mr. William McGuire, Director; Messrs. V. C. Behn, D. J. Belcher, G. H. Blessis, W. Brutsaert, N. A. Christensen, L. B. Dworsky, S. J. Errera, M. I. Esrig, L. M. Falkson, G. P. Fisher, R. Gallagher, C. D. Gates, P. Gergely, W. H. Graf, D. J. Henkel, W. L. Hewitt, A. W. Lawrence, T. D. Lewis, T. Liang, J. A. Liggett, D. P. Loucks, W. R. Lynn, G. B. Lyon, A. J. McNair, J. R. Morgali, A. H. Nilson, C. S. ReVelle, R. G. Sexsmith, F. O. Slate, R. N. White, G. Winter, P. Wroth.

Civil Engineering deals primarily with the large fixed works, systems, and facilities that are basic to community living, industry, and commerce and vital to the welfare of man. The planning, design, construction, and operation of transportation systems, bridges, buildings, water and sewage treatment facilities, dams, and other major artifacts

of society are civil engineering activities. The civil engineer is a major contributor to the solution of problems of urbanization and to city planning. A burgeoning national population and the desire of people to cluster in city complexes require a great increase in the number of well-trained civil engineers who can meet the basic needs of society with efficiency, economy, and safety.

The wide range of subjects which are the concerns of the civil engineer are generally grouped into a number of sub-fields and specializations. At Cornell, there are four subject departments in Civil Engineering:

*Environmental Systems Engineering* (See page 44)

*Geotechnical Engineering* (See page 45)

*Structural Engineering* (See page 45)

*Water Resources Engineering* (See page 46)

These departments provide courses for graduate study leading to advanced degrees and also those courses necessary to support the undergraduate curriculum in civil engineering. The specific aims, objectives, and programs of the above departments are described under the subject names of the departments on the pages listed above.

## The Degree Program

The undergraduate field curriculum in civil engineering leads to the degree, Bachelor of Science. It provides a thorough foundation in the basic sciences, applied sciences, and mathematics which are fundamental to the profession. It also includes an introduction to the major areas of modern civil engineering technology and substantial opportunity for liberal study.

Most students go on to graduate study in the fifth year following completion of the baccalaureate. Three main paths of advanced work at Cornell are:

1. Graduate study in the Field of Civil Engineering leading to the degree of Master of Engineering (Civil). This is the first degree with a civil engineering designation. It is obtained upon completion of a curricular program of thirty credit hours of advanced study, including an extensive design project. The M.Eng. (Civil) program is designed primarily for students who intend to enter the professional practice of civil engineering, and the degree represents attainment of an educational level considered essential for modern practice.

2. Graduate study leading to the degrees Master of Science or Doctor of Philosophy. These degrees are intended primarily for students who plan a career in research, development, or teaching in an area of civil engineering.

3. Advanced study in a related technical field such as applied mechanics, aerospace engineering, or urban planning, or in a nontechnical field requiring an engineering background, such as law or business administration.

## Bachelor of Science (Field Program)

The first four terms are described on pages 30 to 34 of this Announcement. The Division of Basic Studies program specifies two engineering science courses in each term of the sophomore year. Mechanics 211 and 212 are required for entry into the Civil Engineering Field Program. It is recommended, but not required, that students planning to enter civil engineering take Materials Science 6210 and 6211 as their other sophomore engineering science courses.

† One course if Free Elective was taken in Term 7.

## Bachelor of Science (College Program)

As an alternative to the Field Program, the student may elect the *College Program* (see page 47) also leading to a Bachelor of Science Degree. A student with a strong interest in an interdisciplinary and/or specialized program may wish to consider the *College Program*. Where this involves one of the areas of Civil Engineering, either as a major or minor subject, the various department chairmen are prepared to advise and assist the student upon request. Examples of *College Programs* are those combining study in structural engineering and architecture, transportation engineering and urban planning, environmental systems engineering and operations research, and sanitary engineering and oceanography.

## Master of Engineering (Civil)

The degree of Master of Engineering (Civil) is available as a curricular type of professional degree, the general requirements for which are stated on page 16. The basic School requirement is satisfactory completion of at least thirty credit hours of approved course work beyond the Cornell four-year program or its equivalent, in the field of civil engineering. A substantial portion of the work may be in one of the areas of concentration within civil engineering. At least six credit hours in the areas of law, management, or economics is required. Also required as part of the total is satisfactory completion of a graduate-level civil engineering project of three to eight credit hours. Projects are designed to include several of the following aspects of engineering: feasibility study, analysis, design, economics, and systems analysis.

## M.S. and Ph.D. Degrees

The requirements for the degrees of Master of Science and Doctor of Philosophy are described in the *Announcement of the Graduate School*. These are degrees oriented toward research. They require submission of a thesis.

In the Field of Civil Engineering a number of special areas of concentration are available either as major or minor subjects. For clarity, these concentrations are identified as follows with the departments which provide the related graduate instruction. **ENVIRONMENTAL SYSTEMS ENGINEERING:** construction engineering and administration, transportation engineering, environmental systems engineering. **GEOTECHNICAL ENGINEERING:** geodetic and photogrammetric engineering, soils engineering, aerial photographic studies. **STRUCTURAL ENGINEERING:** structural engineering, structural mechanics. **WATER RESOURCES ENGINEERING:** hydraulics and hydrology, water resources engineering, sanitary engineering. A brief description of the activities of each of these four departments follows.

## ENVIRONMENTAL SYSTEMS ENGINEERING

Mr. G. P. Fisher, Chairman; Messrs. G. H. Blessis, L. M. Falkson, T. D. Lewis, W. R. Lynn, C. S. ReVelle.

Environmental systems engineering is a unique area of activity, the main thrust of which is the application of systems analysis, operations research, and economics to the complex and massive technological problems of modern society. It is concerned with methods of allocation of resources in the public sector and with enhancement of the quality of that information which is required for rational decision-making and public investment problems which fall predominantly in the area of civil engineering. Particular emphasis is placed on transportation systems; air, water, and other natural systems; engineering (especially construction) project management; solid waste disposal; and control of epidemic diseases. There is special interest in the problems of urbanization, including an integrated approach to the many technological and planning aspects of modern urban areas, and to associated social and political factors.

Substantial effort is directed to the treatment of large-scale problems such as interurban and urban transportation networks, transport terminal facilities and intermodal transfer efficiency, river basin studies, rationalization of complex construction projects, and on associated land use patterns and land values. The economics, planning and management of all forms of man-made and natural environment, and the associated decision-making process, are stressed.

Through established relationships with the Departments of City and Regional Planning (College of Agriculture), Industrial Engineering/Operations Research, Geotechnical Engineering, Structural Engineering, Water Resources Engineering, and with many other areas of the University, students are encouraged to take advantage of a large variety of ancillary course offerings that support the general program of study.

Undergraduates may concentrate in this subject area by electing the *College Program* and framing a course of study with the assistance of the department. Graduate studies, particularly in transportation engineering and in construction project management, are conducted primarily by the Department of Environmental Systems Engineering.

Graduate studies in water resources systems are undertaken cooperatively with the Department of Water Resources Engineering. Candidates for advanced degrees are considered who have undergraduate or graduate work in any area of civil engineering, in operations research/industrial engineering, and in economics. Arrangements are sometimes made for students with other backgrounds and well-developed career objectives.

## GEOTECHNICAL ENGINEERING

Mr. D. J. Henkel, Chairman; Messrs. D. J. Belcher, M. I. Esrig, W. L. Hewitt, T. Liang, G. B. Lyon, A. J. McNair.

Geotechnical engineering is concerned with those aspects of civil engineering which are associated with the use of the surface of the earth. Earth measurement is an important part and involves surveying, geodesy, photogrammetry, and the related computing and data presentation methods. The techniques of interpretation of aerial photographs and other remote sensing devices coupled with ground observations are used to establish the overall environment and to define the nature of the problems. Soil mechanics and foundation engineering provide the quantitative link with the measurement of soil and rock properties and their use in the design process. Subgrade and pavement design are also covered.

The laboratories, used for both instruction and research, are well equipped. In the photogrammetric area a three projector stereo plotter and a number of other instruments are available. A large collection of aerial photographs from all over the world are held in the libraries, and these are used in both photogrammetric and aerial photographic studies. A broad range of geodetic instruments is also available. The soil mechanics laboratories contain a wide variety of both standard and specialized soil testing equipment. Excellent facilities for the testing of stabilized soils and asphaltic mixtures are provided.

## STRUCTURAL ENGINEERING

Mr. George Winter, Chairman; Messrs. S. J. Errera, R. H. Gallagher, P. Gergely, W. McGuire, A. H. Nilson, R. G. Sexsmith, F. O. Slate, and R. N. White.

Structural engineering comprises the analysis and design of structures of all types, those traditionally identified with civil engineering (e.g., buildings, bridges, watertanks, and dams) as well as those connected with other branches of engineering (e.g., aero-space structures, pressure vessels, and nuclear engineering structures). The Department of Structural Engineering is responsible for undergraduate and graduate instruction and for research in all these areas. In addition, instruction and research in civil engineering structural materials, (e.g., concretes, asphalts, and structural metals) are also the Department's responsibility.

Instruction, both undergraduate and graduate, emphasizes fundamental understanding of structural behavior and modern methods of design and analysis, many of them computer oriented. A large volume

of research, sponsored by a diversity of government agencies and by industry, is carried out in three large and fully equipped laboratories: a structural laboratory for full-scale testing, an extensively equipped models laboratory, and a versatile cement and concrete laboratory.

## WATER RESOURCES ENGINEERING

Mr. C. D. Gates, Chairman; Messrs. V. C. Behn, W. H. Brutsaert, N. A. Christensen, L. B. Dworsky, W. H. Graf, A. W. Lawrence, J. A. Liggett, D. P. Loucks, J. R. Morgali.

Water resources engineering brings together undergraduate instruction, advanced study and research in fluid mechanics, hydraulics, hydrology, sanitary (environmental) engineering and water resources engineering. Three broad areas make up the department's activities: (1) the development of fundamental knowledge of pertinent phenomena and principles through theoretical analysis and laboratory experimentation; (2) the application of this knowledge, along with skills in applied mathematics, statistics and probability, and digital computation techniques, to the analysis and design of processes, structures and systems for water quality control, water quantity control, and waste management; (3) the application of mathematical modeling, economic theory, and systems analysis to the solution of problems in water and other environmental resource planning and control.

Excellent laboratory facilities make possible a wide range of instructional and research experimentation. In the applied fluid mechanics laboratory, well-instrumented models support experimental studies in all phases of fluid flow. At the applied hydraulics laboratory, near Beebe Lake, flows up to fifty cubic feet per second, and natural heads up to eighty feet are available for both research and testing. The sanitary engineering facilities contain some 6,300 square feet of laboratory space and controlled temperature rooms and include separate laboratories specially equipped for water bacteriology and biology, water chemistry, bench and pilot-level unit process studies, and for radiological measurements.

Undergraduates may concentrate in this subject area either by choosing the Field Program in Civil Engineering and electing advanced courses offered by the department or by electing the *College Program* and choosing an engineering major within the department. Individuals considering graduate study in this area should have a baccalaureate degree in engineering science, a branch of engineering, or in a physical science.

## Additional Information

A number of fellowships and assistantships are available to graduate students in civil engineering. Prospective graduate students should consult the *Announcement of the Graduate School*. A brochure, *Graduate Study in Civil Engineering*, may be obtained by writing the Graduate Field Representative, Civil Engineering, Hollister Hall.

## THE COLLEGE PROGRAM

DEGREES OFFERED: Bachelor of Science.

CARPENTER HALL

Mr. William H. Erickson, Chairman, College Program Committee.

The *College Program* has been established to accommodate those students whose educational objectives require more curricular flexibility than is possible in the Field Programs. Thus, to reach a given objective, a student in the *College Program* may combine course sequences from two or more engineering fields or combine an engineering course sequence with a sequence from a nonengineering discipline. Many combinations are possible under the Program as established, and the College Program Committee, which administers the Program, approves all proposals that combine sequences of courses that have an educational objective requiring an engineering foundation.

Similar to the Field Programs in that the same core curriculum requirements must be satisfied, the *College Program* differs from them in that the courses to satisfy the forty to forty-six additional credit hours are not specified by the engineering faculty, but are to be suggested by the student when he applies for admission to the *College Program*. Such admission is normally at the beginning of the student's junior year but applications are made in the first term of the sophomore year.

Within these forty to forty-six credit hours, the student is required to have a minimum of twelve hours in an engineering major, eight hours in an engineering minor, and eight hours in technical electives, with the remaining hours to be satisfied by courses appropriate to the student's objective. The engineering minor may be waived if the objective of the student is best satisfied by a combination of an engineering major and a minor that is in a nonengineering discipline.

Completion of the application form for admission to the program requires a statement of the objective of the student and a term-by-term listing of the courses that are proposed for meeting this objective. It is not expected that the student will compile such a listing on his own, but that, after discussing his objective with the chairman of the College Program Committee, he will develop his program with the advice of a technical consultant in the field of the proposed major. The technical consultant will be a professor recommended to the student by the chairman of the Committee.

Once admitted to the Program, the student's progress is under the supervision of the College Program Committee. His adviser is the chairman of the Committee. The Committee is responsible for all the administrative functions normally performed by the faculty of a Field Program. Examples of student programs currently in progress are:

*Major*

Airphoto interpretation  
 Transportation  
 Computer science  
 Electrical systems  
 Electrical systems  
 Industrial engineering  
 Industrial engineering  
 Materials science  
 Machine design  
 Thermal engineering  
 Analytical engineering  
 Environmental systems  
 Analytical engineering  
 Analytical engineering  
 Environmental systems  
 Water resources  
 Electrical systems  
 Computer science

*Minor*

Geology  
 Regional planning  
 Electrical systems  
 Psychology  
 Biological science  
 Psychology  
 Sociology  
 Geology  
 Electrical systems  
 Industrial engineering  
 Applied math  
 Industrial engineering  
 Industrial engineering  
 Thermal engineering  
 City planning  
 Thermal engineering  
 Premedical  
 Industrial engineering

After completing the *College Program* the student is awarded a Bachelor of Science degree. His graduate work in engineering, whether it be a Master of Science or a Master of Engineering, will depend on the program he has followed as an undergraduate. In some instances, a Master of Engineering program may require more than the additional year beyond the Bachelor of Science degree. This depends upon the relevance of the undergraduate studies to the professional Master's Field.

## COMPUTER SCIENCE

## (COLLEGES OF ENGINEERING AND OF ARTS AND SCIENCES)

DEGREES OFFERED: Master of Science; Doctor of Philosophy.

## UPSON HALL

Mr. J. Hartmanis, Chairman; Messrs. K. M. Brown, R. W. Conway, P. C. Fischer, J. E. Hopcroft, C. Pottle, G. Salton, R. J. Walker, P. Wegner, W. S. Worley.

Computer science, the science of information, is concerned with the nature and properties of information, its structures and classification, its storage and retrieval, and the various types of processing to which it can be subjected. It is also concerned with the physical machines that perform these operations, with the elemental units of which they are composed, and with the organization of these units into efficient information processing systems.

In its various aspects, computer science is closely related to many other fields. The fundamental theory of information processing and the exploration of the limits of the abilities of computing machines

are topics in pure and applied mathematics. Numerical analysis is concerned with the accuracy and efficiency of practical numerical procedures in the area of applied mathematics.

Computer science shares with electrical engineering an interest in the characteristics of physical machines and in computer design. It shares with linguistics an interest in language structure and translation. The implications of current data processing technology for the organization and control of industrial and business operations are pertinent to industrial engineering and business administration. Investigations in the area of artificial intelligence are of interest in psychology and biology. Work in experimental computing relates to several of the disciplines already mentioned.

In the past, many of these subjects have been pursued as parts of various separate fields. Today, increasing recognition is given to the strong common basis of all of this work, and computer or information science is being established as an independent discipline at many leading institutions.

Because of the wide implications of research in the field, the Department of Computer Science at Cornell is organized as an intercollege department of the College of Engineering and the College of Arts and Sciences.

## Computing Facilities

The principal computing facility at Cornell is a multiprocessor complex of IBM 360 systems. The central machine is a 360/65 with a 360/40 serving as an attached support processor. This is located in Langmuir Laboratory at the Cornell Research Park on the periphery of the campus, and is directly linked to satellite computers at three different campus locations. The Engineering College is served through one of these satellite stations in Upson Hall as well as by a number of teletypewriter terminals in different locations. An IBM 1800 computer is also linked to the central computer to provide an analog-digital interface and graphical display equipment. In addition to this new remote-access system, Cornell operates an IBM 1401 and a Control Data 1604 with a satellite 160A.

## The Degree Programs

In the Field of Computer Science, qualified graduate students can earn M.S. and Ph.D. degrees. Although there is no undergraduate field program in computer science in the College of Engineering, it is possible for students in the *College Program* (described on p. 47) to develop a course of study that provides an emphasis on computer science and related areas.

Because of the importance of a strong background in mathematics and engineering sciences, undergraduates in the *College Program* who are interested in advanced study in computer science should plan a

course of upperclass study that will include work in applied mathematics, probability and statistics, and electrical engineering, as well as appropriate courses in computer science.

Graduate students who are interested in the theory, design, and use of automatic computing equipment as a subject in itself should consider the opportunities for advanced training in computer science. In general, it is expected that they have a strong background in mathematics, science, or engineering, although students with exceptional records from other fields will also be considered for admission. Students with an interest in the application of computers to their own major fields should consider a graduate minor in computer science to supplement and interact with their major field of study. Opportunities for research and study exist in the following areas of computer science: numerical analysis, programming languages and systems, automata and computability theory, and information organization and retrieval.

The program for the M.S. degree typically involves one year of graduate-level course work and the writing of a thesis. Before the degree is awarded, a candidate must pass a comprehensive examination covering his course work and his thesis.

A Ph.D. program usually involves approximately two years of graduate-level course work, the demonstration of ability to read scientific literature in two foreign languages (usually chosen from French, German, and Russian), the passing of a comprehensive oral examination, the writing of a dissertation, and a final oral examination on the dissertation. The dissertation must demonstrate the ability of the candidate to conduct an original and independent investigation of high quality and to present the results of the research in a well-organized and cogent manner.

It is possible to obtain the Ph.D. degree without first receiving the M.S. degree, or to obtain the M.S. only, or the M.S. followed by the Ph.D.

## ELECTRICAL ENGINEERING

**DEGREES OFFERED:** Bachelor of Science; Master of Engineering (Electrical); Master of Science; Doctor of Philosophy.

### PHILLIPS HALL

Faculty: Mr. H. J. Carlin, Director; Mr. J. L. Rosson, Assistant Director; Messrs. P. D. Ankrum, J. M. Ballantyne, R. Bolgiano, N. M. Brice, N. H. Bryant, G. C. Dalman, N. DeClaris, L. F. Eastman, W. H. Erickson, D. T. Farley, T. L. Fine, T. Gold, B. Höfflinger, C. E. Ingalls, F. Jelinek, E. F. Johnson, M. Kim, C. A. Lee, R. L. Liboff, S. Linke, L. A. MacKenzie, H. S. McGaughan, P. R. McIsaac, C. W. Merriam, W. E. Meserve, J. A. Nation, B. Nichols, R. E. Osborn, C. Pottle, E. L. Resler, Jr., G. C. Rumi, N. J. A. Sloane, H. G. Smith, R. N. Sudan, C. L. Tang, J. S. Thorp, H. C. Torng, N. M. Vrana, L. S. Wagner, C. B. Wharton, G. J. Wolga, S. W. Zimmerman.

The curriculum leading to the degree of Bachelor of Science in the Field Program of the School of Electrical Engineering is intended to create in the student an understanding of the meaning and the application of those physical laws that are basic to electrical engineering and, at the same time, to provide the opportunity for as much study in the fields of humanities and social studies as is consistent with the objectives of modern education in the field of engineering. The successful completion of this degree program enables the student to follow one of three possible routes to advanced studies. They are:

1. Graduate studies in the Field of Electrical Engineering leading to the degree of Master of Engineering (Electrical). This degree is awarded for successful completion of a curricular program and is intended for a student who expects to practice electrical engineering as a profession but does not plan to engage in research as a career. (See page 16 for a general description of these requirements.)

2. Graduate studies leading to the degree of Master of Science or Doctor of Philosophy. Either of these degrees involves residence on the campus and submission of a thesis and is intended for students who plan to engage in research as a career. The requirements for this degree are described in the *Announcement of the Graduate School*.

3. Advanced studies in fields other than engineering such as law and business administration.

The education of the modern electrical engineer, as represented by the successful completion of the requirements for the degree of Master of Engineering (Electrical), provides a sound foundation for him to practice electrical engineering successfully in a rapidly expanding field including such areas as random, time variable, and nonlinear systems, quantum electronics, plasma physics and magnetohydrodynamic power generation, space communication and control, computer design, and solid state microwave devices, and for engineering functions that range from research to production. In establishing this curriculum, the faculty of the School of Electrical Engineering has recognized the enormous scope of electrical engineering today and has concluded that three main themes are necessary to prepare its students adequately. These themes are called *Electrophysics*, *Systems*, and *Laboratory*. They are interrelated and the curriculum contains an integrated series of required courses in each.

*Electrophysics* is chiefly concerned with our present understanding of the physical laws that govern the design or application of electrical devices. Modern devices from machines to lasers — and those in the process of development — are based on the laws governing electric and magnetic fields, interaction of fields and particles, fluid flow, kinetic theory, thermodynamics, quantum mechanics, properties of materials in the solid state, and plasmas. In the curriculum, these subjects are treated in significant depth and breadth. All undergraduate students enrolled in the E.E. Field Program are required to complete 4311, 4312, 4411, and 4412 as a sequence of electrophysics courses.

The *Systems* sequence deals with the laws that govern the interaction of devices whose individual behavior is specified, as well as the response

of these systems to various inputs. These systems may be solely electrical or involve transducers; they may contain both linear and nonlinear elements; they may be passive, active, or random. Systems may be used for many purposes, e.g., power distribution control, communications, and instrumentation. The course program is designed to develop the general methods of analysis required for all such systems together with understanding of the physical significance of the solutions. All undergraduate students enrolled in the E.E. Field Program are required to complete 4301, 4302, 4401, and 4402 as a sequence of courses in the systems area of study.

The *Laboratory* sequence emphasizes that new developments in engineering practice come from a blend of theory and experimentation. Laboratory work brings students into close touch with reality in the areas of both systems and electrophysics. The experimental work may be based on the analysis developed in either of the areas. The curriculum contemplates an expansion of the time normally spent by the student in the laboratory. Each of the third-year laboratory courses involves two laboratory periods each week. Sufficient time and flexibility are provided to allow for individual exploration, and the goal is to enable the student to devise his own experiments. All undergraduate students enrolled in the E.E. Field Program are required to complete 4321, 4322, and six hours of E.E. Electives with laboratory.

## Laboratory and Research Facilities

A wide variety of excellent facilities are available for both undergraduate and graduate students enrolled in the Field of Electrical Engineering. Most of the undergraduate and graduate instruction is housed in Phillips Hall, a modern building with more than 100,000 square feet of floor space. In addition to the classrooms, offices for faculty and graduate students, conference rooms, and machine and electronics shops, there are two undergraduate laboratory areas—each covering approximately 6,000 square feet. Each laboratory is served by a stockroom containing the most modern electrical and electronic equipment and related instruments needed to implement the laboratory sequence of courses. A number of laboratories located in Phillips Hall are devoted solely to graduate studies and research programs. Among these are laboratories for systems research, control systems, analog computers, switching circuits, microwave electronics, physical and solid state electronics, spectrophotometer, and for illuminating engineering research. The Electric Energy Research Laboratory and the Radio Star Scintillation Laboratory are located in the vicinity of the University campus. The Arecibo Ionospheric Observatory at Arecibo, Puerto Rico, has internationally recognized facilities which include two radar transmitters each having a peak-power output of 2,500,000 watts and operating in conjunction with a 1000-foot-diameter antenna. These facilities are used for research studies of the upper atmosphere and for radio-astronomy and radar-astronomy research.

# The Degree Programs

## BACHELOR OF SCIENCE (FIELD PROGRAM)

\* The engineering science and liberal electives listed above are part of the core curriculum requirements described on page 10.

† 4411 and 4412 satisfy the core curriculum engineering science requirements of physical chemistry and materials science.

## Scholastic Requirements

A student failing to make satisfactory progress toward his degree, evidenced by a low average, by course failures, or by low grades in major courses, may be given a trial term or dropped from the School.

## Field Elective Courses

The curriculum of the School of Electrical Engineering provides for a wide selection of elective technical courses which may be incorporated into the Field Programs of the students. The selection of these courses can begin with Term 7. It is hoped that students will use these elective courses to pursue effectively their individual interests in the Field Program of Electrical Engineering.

For the elective courses listed in the electrical engineering section in the Description of Courses section of this Announcement, the digits in the four digit course number have significance as follows:

*First digit:* the 4 signifies that the course is taught in the School of Electrical Engineering.

*Second digit:* signifies the year-level of the course. Thus, a 4 means that the course may be taken by a student who is in his fourth year or beyond.

*Third digit:* signifies the course-group in which the course is considered to be assigned. Thus, a 3 means that the course is in the semiconductor and quantum electronics group.

*Fourth digit:* signifies the term in which the course is offered. If the digit is odd, the course is offered in the fall term; if even, the spring term. In general, a 0 means either term.

## THEORY OF SYSTEMS AND NETWORKS

- 4501 Systems with Random Signals
- 4502 Statistical Aspects of Communication
- 4503 Theory of Linear Systems I
- 4504 Theory of Nonlinear Systems I
- 4505-06 Optimization and Approximation Techniques I and II
- 4507-08 Random Processes in Electrical Systems I and II
- 4571-72 Network Analysis and Synthesis I and II
- 4601 Theory of Nonlinear Systems II
- 4603 Theory of Linear Systems II
- 4604 Unified Theory of Electromechanical Systems

## ELECTROMAGNETIC THEORY

- 4511 Electrodynamics
- 4514 Microwave Theory
- 4567 Antennas and Radiation
- 4568 Advanced Antenna Methods and Problems

## GENERAL LABORATORY COURSES

- 4421-22 Advanced Electrical Laboratory I and II
- 4520 Graduate Laboratory

**ELECTRONICS**

- 4431-32 Electronic Circuit Design I and II
- 4433-34 Semiconductor Electronics I and II
- 4531-32 Quantum Electronics I and II
- 4535-36 Solid State Devices I and II
- 4538 Electromagnetic Properties of Solids
- 4631 Advanced Microwave Electronics

**POWER SYSTEMS AND MACHINERY**

- 4441-42 Contemporary Electrical Machinery I and II
- 4443 Power System Equipment
- 4444 High Voltage Phenomena
- 4445-46 Electric Energy Systems I and II

**RADIO AND PLASMA PHYSICS**

- 4461 Wave Phenomena in the Atmosphere
- 4462 Radio Engineering
- 4561-62 Plasma Physics I and II
- 4564 Advanced Plasma Physics
- 4565-66 Radiophysics of the Atmosphere I and II
- 4661 Kinetic Equations

**COMMUNICATIONS**

- 4472 Introduction to Algebraic Coding
- 4673 Principles of Analogue and Digital Communications
- 4674 Transmission of Information
- 4676 Decision and Estimation Theory for Signal Processing

**COMPUTING SYSTEMS AND CONTROL**

- 4481-82 Feedback Control Systems
- 4483 Analog Computation and Simulation
- 4485 Algebraic Foundation for Switching Systems
- 4487-88 Switching Systems I and II
- 4589 Automata
- 4681 Random Processes in Control Systems

**MASTER OF ENGINEERING (ELECTRICAL)**

Admission to the Master of Engineering (Electrical) degree program is open to persons who have been granted Bachelor's degrees, or the equivalent, and who have sufficient training to indicate that they can profitably study the advanced courses offered for these students in the School of Electrical Engineering. The purpose of this degree program is to offer depth of study in both comprehensive and specialized electrical engineering subjects, and to offer study extending the abilities of the electrical engineer to other fields.

The requirements for the Master of Engineering (Electrical) degree are:

1. A minimum total of thirty credit hours of advanced technical course work in the field of electrical engineering or in related subjects.

2. A minimum of two two-course sequences in advanced electrical engineering (chosen from a designated list).

3. A minimum of three credit hours of engineering design experience involving individual effort and a formal report.

4. A minimum grade point average of 2.5 and a minimum final grade of C for any courses counting toward this degree.

There are no residence requirements, although all course work must, in general, be completed under Cornell University staff instruction. The degree requirements must normally be completed within a period of four calendar years.

Graduates of Cornell University with a Bachelor of Electrical Engineering degree may be granted up to fifteen hours of credit for advanced courses taken during the fifth undergraduate year, provided they enter the Master of Engineering (Electrical) program not later than the fall term following the sixth anniversary of their receiving the B.E.E. degree. For those students who are granted fifteen credit hours of advanced standing, the requirement is six credit hours in the School of Electrical Engineering rather than two-course sequences, and the design requirement may be waived.

## M.S. AND PH.D. DEGREES

The requirements for the degrees of Master of Science and Doctor of Philosophy are described in the *Announcement of the Graduate School*. These are research degrees that involve residence on the campus and submission of a thesis.

In the School of Electrical Engineering, research work leading to these degrees may be undertaken in the area of *electrophysics* including radio propagation, radio and radar astronomy, plasma physics, magneto-hydrodynamics, physical and microwave electronics, materials science in electrical engineering, quantum electronics, biomedical electronics, electric power conversion, electrical breakdown phenomena, etc., and in the area of *systems* including information theory, network theory, communications systems, control systems, switching circuits, computers, cognitive systems, etc. A number of fellowships, research assistantships, and teaching assistantships are available to candidates for the degrees of Master of Science and Doctor of Philosophy who are doing their thesis research in the School of Electrical Engineering. Assistantship applications and further information can be obtained by writing to the Coordinator of Graduate Studies, School of Electrical Engineering.

## ENGINEERING PHYSICS

**DEGREES OFFERED:** Bachelor of Science; Master of Engineering (Engineering Physics). The Field of Applied Physics offers the Master of Science and Doctor of Philosophy degrees (see page 62).

## CLARK HALL

Mr. N. Rostoker, Director; Mr. T. R. Cuykendall, Associate Director; Messrs. B. W. Batterman, K. B. Cady, D. D. Clark, R. K. Clayton, D. R. Corson, E. T. Cranch, H. H. Fleischmann, P. L. Hartman, J. P. Howe, J. A. Krumhansl, R. McPherson, M. S. Nelkin, H. G. Newhall, E. L. Resler, Jr., T. N. Rhodin, H. S. Sack, Mrs. M. Salpeter; Messrs. B. M. Siegel, J. Silcox, W. W. Webb, G. J. Wolga.

Creativity and innovation in engineering and applied science depend significantly on basic and advanced knowledge in physics and applied mathematics and on the techniques of applying this knowledge to engineering problems. Accordingly the engineering physics program provides this kind of knowledge, encourages this approach among students with an interest and competence for such areas. It seeks to prepare students for the continually widening engineering challenges that have deepening roots in fundamental knowledge produced by physical research.

The student pursues thorough and advanced courses in physics and applied mathematics. He is encouraged to develop insight into the application of concepts. To this end, his curriculum includes a core of engineering sciences and a systematic development of electrical and electronic systems. Thus he may proceed from a basic understanding of matter and energy through a knowledge of techniques to a number of applied themes. By selecting electives, he opens for himself the way to several modern technological areas such as recent advances in gas-dynamics, aerodynamics, plasmas, radio astronomy, astrophysics, other space sciences, modern topics in solid state physics systems development, and nuclear science and engineering.

Study in this field provides a sound foundation for graduate study in physics, applied physics, nuclear science and engineering, aerospace engineering, and in other areas of engineering research based on physics and applied mathematics. Also, the curriculum has proved to be an excellent foundation for employment in the newer technological industries that transcend the boundaries of the established engineering professions. Therefore, students in the program have the opportunity to qualify for: (1) the five-year professional Master of Engineering programs in engineering physics, nuclear engineering, and aerospace engineering, each created for those who wish to practice the newer applications of physical science; (2) further education in professional fields enriched by a background in applied science; or (3) positions in industry at the end of four years, usually to continue learning on the job and often to participate in advanced training programs.

## Laboratory and Research Facilities

The principal activities of the department are housed in Clark Hall, which also houses the Department of Physics, and in the Nuclear Reactor Laboratory. Clark Hall is the center for undergraduate affairs

such as student advising. Graduate activities and research are under way in both buildings.

The department is fully equipped for project and research studies in the areas of electron microscopy and diffraction, solid state and surface physics, low energy nuclear physics, nuclear chemistry, and nuclear reactor physics and technology. The department also participates actively in the University-wide plasma physics program.

Five commercial electron microscopes are in use in the department. Ultrahigh resolution instruments for atomic and molecular microscopy are being developed. Superconducting and magnetic phenomena are being studied at very low temperatures. Apparatus and equipment for studying nuclear engineering and related nuclear phenomena are extensive. (See page 81.)

## The Degree Programs

Of the core engineering sciences that may be completed before the end of the fourth semester in the Division of Basic Studies, the physical chemistry-materials science sequence and electrical science sequence are required. Familiarity with the phenomena occurring in materials and in electrical systems provides a good basis for building deeper and wider understanding as well as sound applications. The relationship between interest and proficiency in physics and mathematics at this stage and further progress is obvious.

While students may enroll in the engineering physics program from the nonhonors sections of physics and mathematics, registration in honor sections is very desirable and strongly recommended.

Initiation of the study of a specialty is encouraged through courses such as Physics 444, Nuclear Physics; or Engineering 8303, Nuclear and Reactor Physics; Physics 454, Solid State Physics; and additional topics in Physics 410, Advanced Physics Laboratory.

By suitable selection of technical electives during his last year the qualified student may prepare for a career in one of the many specialized fields of engineering. As examples, four possible programs are outlined:

**AEROSPACE ENGINEERING** (see page 22). The undergraduate program in engineering physics is particularly suited for work in aerospace engineering either at the undergraduate or at the graduate level.

**NUCLEAR ENGINEERING.** The student interested in the nuclear energy field, or in nuclear reactor power developments, should choose his electives from courses in reactor physics, nuclear measurements, advanced heat transfer, and in physics of solids underlying radiation damage problems. His attention is directed to courses 8303, 8309, 8312, 8351, and to 5760, 6872, and 7201, which are described in detail in the section, "Description of Courses." Additional closely related courses such as Physics 444 are also available.

**MATERIALS SCIENCE.** The core program of the engineering physics curriculum combined with electives in engineering physics (e.g., 8262, 8512), materials science and engineering, and with specialized seminars provides an excellent preparation for research in materials science, a field that often holds the key to further technological progress. Students can find ample possibilities for graduate projects by joining one of the active research groups studying such topics as surface physics, properties of thin films, electron microscopy and diffraction, relaxation phenomena and their relation to dislocations and other defects, photoconductivity, and others.

**SPACE SCIENCE AND TECHNOLOGY.** Engineering physics provides an excellent preparation for undergraduate or graduate specialization in this challenging field. Qualified students may elect courses in gas-dynamics, radio wave propagation, optics, astronomy, relativity, and other related courses. Several faculty members have strong research interests in this field and are available to supervise senior research projects related to their areas of specialization. Students may undertake projects as a part of the work of the Center for Radiophysics and Space Research.

### BACHELOR OF SCIENCE

The Bachelor of Science in engineering and preparation for graduate work in the Fields mentioned above may be obtained by satisfactorily completing the following curriculum or its equivalent. (Terms 1 through 4 are described on pages 30-34).

	<i>Contact Hours</i>		
	<i>Credit Hours</i>	<i>Lec. Rec.</i>	<i>Lab. Comp.</i>
<b>TERM 5</b>

Liberal Elective .....	3 or 4	0	0
Total .....	16 to 18		

**THE COLLEGE PROGRAM**

The *College Program* (see page 47), leading to the degree of Bachelor of Science, may be pursued through a suitable selection of courses and themes in physics and applied physics. Such a program might be a combination of physics, applied physics, and biological sciences as the beginning of a career in biophysics. Each program must be approved after formulation by the student and cannot be specified in approved form in advance. Some partial course combinations from which a student might formulate a program are:

**MAJOR IN NUCLEAR ENGINEERING**

Physics 436, Modern Physics  
 Engineering 8303, Introduction to Nuclear Engineering  
 Engineering 8351, Nuclear Measurements Laboratory  
 Engineering 5760, Nuclear and Reactor Engineering  
 Engineering 8336, Nuclear Materials

**MINOR IN NUCLEAR ENGINEERING**

Physics 436, Modern Physics

Engineering 8303, Introduction to Nuclear Engineering  
and either

Engineering 8351, Nuclear Measurements Laboratory  
or

Engineering 8336, Nuclear Materials

**MAJOR IN ENGINEERING PHYSICS**

Physics 355, Intermediate Electrodynamics

Physics 356, Intermediate Electrodynamics

Physics 443, Atomics and Introductory Quantum Mechanics

Physics 410, Advanced Experimental Physics

**Scholastic Requirements**

A student is expected to pass every course for which he is registered, to maintain each term a grade point average of about 2.3 or higher, and to demonstrate aptitude and competence in the basic subject matter of the curriculum.

A student whose performance falls below these requirements will be academically deficient, and may be refused permission to continue his studies in the department.

**MASTER OF ENGINEERING (ENGINEERING PHYSICS)**

The objectives of the four-year engineering physics program are well served by an additional year of advanced study and by the initiation of individual and independent work. The student has the opportunity to master advanced topics in physics and can extend his skill in his chosen engineering specialties. He must carry out an independent project that provides experience in defining objectives, making plans, prosecuting a program, and reporting conclusions. Thus he is expected to develop and display the skills and the responsibility needed for working independently or cooperatively toward engineering goals without firmly prescribed guide lines other than his own knowledge and judgment.

From the Master's Program the student may move into development work, for example in industry, or he may go on to more advanced graduate study, either in the Field of Applied Physics or in some other related field.

Most of the laboratory facilities for research in the areas described above are made available for the student projects required for the M.Eng. degree. Each project is supervised by a member of the faculty active in the subject.

**Admission Requirements**

1. For Cornell students: A grade point average of 2.5 or higher in the four-year Field Program in engineering physics will allow admission without petition.

2. For transfer students: Evidence is required that the candidate has the ability and preparation to complete successfully the program of study.

## Requirements for the Degree

1. An informal study, or project, of at least six credit hours value, which requires individual effort and a formal report, and which may be either experimental or analytical.

2. (a) If the project is experimental, one course in mathematics or applied mathematics; or (b) if it is analytical, one term of advanced laboratory, Physics 510, or an equivalent laboratory course to be taken upon approval by the Curriculum Committee of the department.

3. Physics 572, Quantum Mechanics.

4. A minimum of six hours in an engineering course sequence.

5. Chemistry 380, 596, or a new equivalent course to be arranged.

6. A seminar course — a modified version of 8252. One credit hour or more by arrangement.

7. Technical electives to bring the total credit hours to thirty.

## MASTER OF ENGINEERING (NUCLEAR)

This program is described elsewhere in the Announcement. See page 80.

## M.S. AND PH.D. DEGREES IN APPLIED PHYSICS

Graduate study in the Field of Applied Physics offers the opportunity to achieve proficiency in physics, mathematics, and applied science. The course program resembles a major in Physics, and Applied Physics is particularly suitable for students preparing for a scientific career in areas of applied science based on principles and techniques of physics and in associated areas of physics. It provides a means for students with undergraduate training in physics to branch out into applied science while continuing the study of physics, and for students with backgrounds in engineering or another science to extend their knowledge of physical science principles and techniques.

A student may choose for specialization and thesis research any subject that is compatible with an approach based on the application of principles of physics and mathematics. Individual programs of study are planned to meet the needs and interests of each student, and programs involving several academic disciplines and topics that are undergoing transition from fundamental physics to applied science are readily accommodated.

Current areas of advanced study and research include: applied theoretical physics, biophysics, chemical physics, physics of fluids, nuclear and reactor physics, optics, plasma physics, radiation and matter, solid state physics and materials sciences, space physics, and surface physics.

The faculty of the Graduate Field of Applied Physics consists of the faculty of the Department of Engineering Physics and additional members from other departments in the Colleges of Engineering, and Arts

and Sciences. This broad representation makes possible programs in a broad range of areas of applied and engineering physics.

The graduate program in Applied Physics is an extension to the graduate level of the same philosophy on which the undergraduate curriculum in engineering physics is based. The formal course program at the graduate level contains a core of physics and mathematics courses and provides for advanced study and research in a variety of areas of physics and applied science. Details of the program, requirements for admission, and areas of advanced study are given in the *Announcement of the Graduate School* and in bulletins available from Field Representative, Applied Physics, Clark Hall.

Research in which graduate students in applied physics currently participate includes studies of coherence of light generated by lasers, superconductivity in high magnetic fields, phase transformations at high pressures, high resolution electron optics, studies of quantum electronics using infrared spectroscopy, observations of critical phenomena in fluids using homodyne spectroscopy, observations of the atomic structure of crystal surfaces by field ion microscopy and low energy electron diffraction, analysis of nuclear structure by analysis of the decay of short-lived radio isotopes formed in a pulsed nuclear reactor, and theoretical studies of plasma instabilities, molecular dynamics in fluids, and the statistical physics of phase transitions in quantum fluids. These topics represent just a few of the interesting variety of timely topics available for study and research in applied physics.

## ENVIRONMENTAL SYSTEMS ENGINEERING

(See page 44.)

## INDUSTRIAL ENGINEERING OPERATIONS RESEARCH

DEGREES OFFERED: Bachelor of Science; Master of Engineering (Industrial); Master of Science; Doctor of Philosophy.

### UPSON HALL

Mr. B. W. Saunders, Director; Messrs. R. N. Allen, R. E. Bechhofer, R. H. Bernhard, R. W. Conway, H. Emmons, J. P. Evans, H. P. Goode, J. B. Johnston, K. O. Kortanek, W. L. Maxwell, N. U. Prabhu, S. Saltzman, M. W. Sampson, A. Schultz, Jr., H. M. Taylor III, L. I. Weiss.

*Industrial engineering* is concerned with the analysis, design, and operation of integrated systems of men, materials, and equipment to perform a useful function. Operating systems, which appear to be very different from each other physically, may have a number of common characteristics which allow their analysis and synthesis to be performed by modern industrial engineering (systems engineering) methodology and techniques. *Operations research*, on the other hand, is concerned with research into the underlying phenomena and interactions that are

present in operating systems for the purpose of a fuller understanding of the behavior of individual elements within, as well as total system performance in loosely coupled man-machine systems. Such systems are typically found in production, distribution, transportation, merchandising, planning, and research and development activities to name a few representative functional areas of interest. Organizationally they are found in industrial, commercial, and governmental groups; hence the field of application is exceedingly broad and the relevance of the work extremely important for the needs of modern society with its ever increasing complexity and costs.

As a result of research into operational phenomena and the generalization of the observed behavior of the elements of these systems (both men and machines) a body of knowledge is emerging which can be identified as a "science of operations." Among topics included in this science are queuing theory, inventory theory, reliability theory, decision theory, game theory, optimization techniques and algorithms, computer technology, and simulation. They require a firm grasp of modern algebra as well as applied probability and statistics. As a result of the improved theoretical knowledge of the operational characteristics of complex systems, the industrial engineer is provided with better tools and techniques to evaluate, synthesize, and carry out his design function. The undergraduate program, therefore, places major emphasis on the analytical methodology to sustain subsequent careers in research (the MS/Ph.D. program) or professional engineering (Master of Engineering).

Following the first two years of work in the Division of Basic Studies, the curriculum leading to the professional degree in industrial engineering, Master of Engineering (Industrial), develops the necessary background in probability, statistics, computing, and cost analysis in the third year and goes into considerable depth in analysis, design, model building, and experimental methods in the fourth year. Students satisfactorily completing the work of these four years are awarded a Bachelor of Science degree. Qualified candidates may then continue with the fifth year of study which includes a two-term project and a number of applied analytical courses which are closely integrated with the work of the previous four years. The required courses coupled with a well-planned elective program permit the student to develop a course of study of considerable breadth or depth to suit his own interests.

## Laboratories and Research Facilities

The program in industrial engineering is under the direction of the faculty of the School of Industrial Engineering/Operations Research. The principal instruction is given in the Department of Operations Research with other departments (e.g., Computer Science) providing instruction in certain methodological specialties of interest to industrial engineers. Facilities include some conference-type class and seminar rooms, a methods laboratory, and computing rooms containing adding machines and desk calculators. Many of the activities required

in the operation of the University, certain community activities, and operations in industrial plants located in the area, supply real-life research problems and projects in engineering design. Also, a basic laboratory for the Department is the Cornell Computing Center (See page 49). While every engineering student at Cornell learns how to program problems for the computer in his freshman year, industrial engineering upperclassmen are required to learn considerably more about computer science, with problems requiring use of a high speed digital computer assigned in many of the courses. In addition, term projects, graduate theses, and a considerable amount of departmental research utilize computer time to the extent that the Department has consistently been one of the largest users of the computer on the campus.

## The Degree Programs

### BACHELOR OF SCIENCE

The first four terms are described on pages 34-34 of this Announcement. The Division of Basic Studies program specifies two engineering science courses in each term of the sophomore year. For industrial engineering students, these can be any two that are offered, with the mechanics and the physical chemistry-materials science sequences preferred. The remaining two will then be scheduled during the junior year in order to delay electives until the senior year when a wider choice will be available because of the student's more complete preparation at that point.

Laboratory .....	4	2	5
Engineering 9321, Industrial Engineering			
Planning and Control .....	4	2	5
Technical Elective .....	3	—	—
Liberal Elective .....	3	—	—
Free Elective .....	3	—	—
	<hr/>		
Total .....	17		

\* This will be the third engineering science course mentioned above (under the heading "Bachelor of Science") and not taken in the second year. It will generally be Electrical Engineering 341-342.

Note: Students may take four-credit hour elective courses in place of three-credit hour courses where they so desire.

## Scholastic Requirements

A student in the School of Industrial Engineering who does not receive a passing grade in every course for which he is registered, who fails in any term or summer session to maintain an average grade of C, or who is not otherwise making substantial and steady progress toward the completion of his degree requirements, may be suspended.

## Elective Courses

The industrial engineering curriculum is specifically designed to provide in its elective content considerable flexibility in both technical and liberal courses. It includes a minimum of thirty-three elective credit hours (including six hours taken in the Division of Basic Studies) divided into eighteen liberal, nine technical and six free. This permits students with widely varying interests to develop programs which meet their own needs. For example, the student may utilize the six technical and six free electives to take twelve hours of work in one technical area. This may be in industrial engineering or it may be in another engineering field. For illustration: a student might take a concentration

of courses in machine design (mechanical engineering), in sanitary engineering (civil engineering), or in the systems sequence of electrical engineering. Such a combination is both possible and logical because the analytical methods of industrial engineering lend themselves to work in virtually every engineering field. Many other combinations exist which the student can develop with the approval of his advisor.

## MASTER OF ENGINEERING (INDUSTRIAL)

The professional Master of Engineering (Industrial) degree program is designed for those primarily interested in becoming proficient in the practice of modern industrial engineering. This is a formal "course" program which concentrates on additional analytical and design techniques with special emphasis on their application. To be accepted as a candidate for the Master of Engineering degree, an applicant must (1) hold a Bachelor's degree in one of the fields of engineering from an institution of recognized standing; (2) have an adequate preparation for graduate study in industrial engineering; and (3) show promise of doing well in advanced study as judged by his previous scholastic record or other achievements.

## M.S. AND Ph.D. DEGREES

The Master of Science and Doctor of Philosophy programs are designed for those primarily interested in academic or industrial research and in teaching. A student matriculating for one of these degrees may concentrate his studies in any one of several subjects such as industrial engineering, operations research, systems analysis and design, applied probability

and statistics, and information processing. To be accepted as a candidate for the Master of Science or Doctor of Philosophy degree in one of the subjects of concentration, the applicant must have been graduated from an institution of recognized standing with a Bachelor's degree in engineering, mathematics, or the physical sciences. In addition he must have had a superior undergraduate scholastic record as evidence of his ability to pursue advanced study and research in the selected field. In case any doubt exists that these requirements are not all met, it is suggested that the student take the Graduate Record Examination of the Educational Testing Service and have the results sent to Cornell.

These graduate programs rely heavily on the very extensive academic resources of the University. The presence on the campus of the professional schools of Business and Public Administration and of Industrial and Labor Relations, and the Department of City and Regional Planning, as well as such departments in the College of Arts and Sciences as mathematics, economics, psychology, and sociology provide students with an extremely wide range of courses from which to draw. For example, one doctoral candidate might have a major concentration in systems analysis and design and select his minor concentrations in mathematics and econometrics while another might build a program combining industrial engineering, psychology, and applied statistics.

Further information about any of these graduate programs may be obtained by writing to the Director of Industrial Engineering, Upson Hall, or to the Graduate Field Representative of Operations Research, Upson Hall.

## MATERIALS SCIENCE AND ENGINEERING

**DEGREES OFFERED:** Bachelor of Science; Master of Engineering (Materials); Master of Science; Doctor of Philosophy.

### BARD HALL

Mr. W. S. Owen, Director; Mr. M. S. Burton, Assistant Director; Messrs. R. W. Balluffi, B. W. Batterman, J. M. Blakely, J. O. Jeffrey, H. H. Johnson, C. Y. Li, A. L. Ruoff, S. L. Sass, E. Scala, D. N. Seidman, G. V. Smith, A. Taylor.

Materials science is a new discipline which relates the principles of physics and chemistry to materials, while materials engineering has developed during the past several years principally from metallurgical engineering. This evolution has been hastened by rapid and extensive developments in nonmetallic materials. Modern engineering requires new and improved materials having properties well beyond those attainable with common metals and alloys. Thus, further understanding of the nature of materials and control of their properties has become a vital factor in the development and selection of materials. Empirical approaches have been replaced by theoretical and analytical treatments of materials and their properties, as the art of metallurgy has become the science of materials. Selection, processing, and application of materials for specific needs has become materials engineering.

## Laboratory and Research Facilities

The Materials Science and Engineering Department is centered in Bard Hall, and, in addition, occupies portions of Thurston Hall and Kimball Hall, a total area of 50,000 square feet. Facilities include the newest of the Cornell engineering buildings, Bard Hall, completed in 1963, and extensively equipped for both undergraduate and graduate instruction and research. New facilities for studying the structure of solids by physical measurements, microscopy, metallography, and X-ray diffraction are available. Equipment for processing materials by casting, welding, heat treatment, compacting and sintering, deformation, and for many of the newer processing procedures are included. Laboratories for preparing and studying nonmetallic materials, especially ceramics, are also housed in Bard Hall.

This Department participates with other departments of the University in the interdisciplinary Materials Science Center established at Cornell with funds from the Advanced Research Projects Agency. The Materials Science Center supports central facilities in Bard, Thurston, and Clark Halls for service and research in metallography, X-ray diffraction, electron microscopy, effects of high temperature on materials, effects of high pressure on materials; and service facilities for producing, characterizing, and testing various metallic and nonmetallic materials.

## The Degree Programs

At Cornell, the materials science and engineering curriculum provides mathematics, physics, chemistry, and engineering sciences that are fundamental to effective work in materials science and materials engineering. The basic work on materials is continued in the required courses. These include discussions of crystallographic and other structural aspects of materials, mechanical behavior, phase transformations and their kinetics, and electrical and magnetic properties of materials. By suitable choice of electives, there is considerable flexibility within the curriculum.

However, it has been found convenient to define *two* general course programs, one containing a greater emphasis on the engineering applications of materials science than does the other. The *materials science and engineering* program contains required courses in the chemical and mechanical aspects of materials processing, whereas the *materials science* alternative emphasizes the scientific basis of the subject by providing different courses in mathematics and solid state physics. It is usually advisable for students taking the materials science option to elect at least one of the two courses in materials processing.

All able students are encouraged to take at least one year of graduate study to extend their engineering course work or their experience in laboratory investigation and research.

While the materials science option provides the better basis for starting research in some of the areas currently active in the Department,

there is also much research activity with a substantial engineering emphasis. Thus, either program can be a good preparation for graduate study.

## BACHELOR OF SCIENCE

Course programs for Terms 1-4, administered by the Division of Basic Studies, are described on pages 30-34.

Liberal Elective .....	3-4*	—	—
Free Elective .....	3-4†	—	—

\* Minimum for B.S. degree is 133 credits. Students must take in excess of the minimum in some terms to meet this requirement.

† Students will normally register for three credits, but may register for four credits with the consent of the instructor.

‡ Students intending to take a professional engineering degree in Materials are advised to elect the Materials Processing courses Engr. 6045, 6046.

## Elective Courses

The programs in materials science and engineering have a substantial number of elective hours during the last two years. This flexibility allows students having special interests, either within the field or in other divisions of the College or University, to plan educational programs that closely parallel their interests. Faculty advisers of the Department will assist each student to plan a suitable program and to select appropriate elective courses.

The following are given as examples of elective courses. Many others are possible.

Chemistry 357, Introductory Organic Chemistry  
 Chemistry 358, Introductory Organic Chemistry  
 Chemistry 410, Inorganic Chemistry  
 Chemistry 481, Advanced Physical Chemistry  
 Engineering 1159, Experimental Mechanics  
 Engineering 1163, Applied Elasticity  
 Engineering 1168, Theory of Plasticity  
 Engineering 3331, Kinematics and Components of Machines  
 Engineering 3372, Experimental Methods in Machine Design  
 Engineering 3665, Transport Processes  
 Engineering 5742, Polymeric Materials  
 Engineering 5752, Polymeric Materials Laboratory  
 Engineering 5760, Nuclear and Reactor Engineering  
 Engineering 6669, Introductory Physical Ceramics  
 Engineering 6872, Nuclear Materials  
 Engineering 8302, Nuclear and Reactor Physics

## THE COLLEGE PROGRAM

For students wishing to combine the study of materials with some other discipline, course sequences are available to provide a major or minor program in materials science and engineering. All students will be

required to take 6211, Materials Science; and 6031, Structure of Materials. Additional courses in materials science or materials engineering will complete the major or minor sequence. These will be selected to meet the needs of each student. (See pp. 47-48 for an outline of the *College Program*.)

## MASTER OF ENGINEERING (MATERIALS)

A student who has completed a four-year undergraduate program in engineering or the physical sciences is eligible for consideration for admission to the Master of Engineering (Materials) program. The course of study can be completed in one academic year by students whose undergraduate training is in metallurgy, metallurgical engineering, or materials; one additional term is necessary for most students having other undergraduate preparation.

	Contact Hours		
	Credit Hours	Lec. Rec.	Lab. Comp.

\* Selected from courses 6601, 6602, 6603, 6604, 6605, 6606, 6611.

## GRADUATE STUDY

Unique opportunities are open to the student undertaking graduate study in materials at Cornell. Instruction is given in a broad spectrum of topics, ranging from the fundamental aspects of materials behavior to problems associated with materials applications in a multitude of engineering systems. Metallic and nonmetallic materials, as well as some aspects of the liquid state, are incorporated into a common framework of instruction.

Graduate programs lead to the degrees of Master of Engineering (Materials), Master of Science, and Doctor of Philosophy. The M.S. and Ph.D. programs are primarily science-oriented courses of study and research, which are directed toward a career in research, development, advanced engineering, or teaching. A candidate for either degree may choose as his major subject area either *materials science* or *materials and metallurgical engineering*.

A student who enters with an undergraduate degree may register for either the M.S. or Ph.D. degree. Toward the end of his first year, the student's progress is reviewed by his Special Committee. If that group takes favorable action then, or at a later date, the student is recommended for admission to candidacy for the Ph.D. degree. If he wishes, the student may then proceed directly to the Ph.D. without taking the M.S.

The courses offered by the Materials Science and Engineering Field presume a sound undergraduate education in such areas as mathematics, physical metallurgy, atomic and solid state physics, and metallurgical thermodynamics. Graduate students enrolled with deficiencies in any of these areas will be permitted to remove them by taking intermediate level courses, with the understanding that somewhat more time may be needed to complete the degree program.

To form an adequate foundation for more specialized courses and for thesis research, the faculty has developed a core program of courses in materials science. These cover modern theories of materials behavior at an advanced level, including such topics as imperfections; nucleation theory; phase transformations; electric, magnetic and mechanical properties of solids; lattice dynamics; phase equilibria, rate processes.

A significant part of the Cornell graduate educational experience is the opportunity to participate in formal and informal seminars and research conferences, where current Cornell research programs are described and guest speakers present the latest developments in other laboratories.

## MECHANICAL ENGINEERING

**DEGREES OFFERED:** Bachelor of Science; Master of Engineering (Mechanical); Master of Science; Doctor of Philosophy.

### UPSON HALL

Mr. D. G. Shepherd, Director; Messrs. N. W. Abrahams, J. F. Barrows, J. F. Booker, A. H. Burr, B. J. Conta, T. A. Cool, D. Dropkin, G. B. DuBois, H. N. Fairchild, A. F. Gagne, Jr., B. Gebhart, R. L. Geer, M. S. Gjesdahl, G. R. Hanselman, S. Leibovich, H. N. McManus, Jr., F. K. Moore, R. M. Phelan, R. L. Wehe.

Mechanical Engineering is the broadest of the several fields of engineering and the curriculum is designed to provide this breadth of training. Mechanical engineers are involved in two major streams of technology: one, the production and utilization of energy and the other, the design and production of goods, machines, equipment and systems. They are concerned with conversion between mechanical, thermal, nuclear and electrical energy; the uses of energy in transportation by land, sea and air, and in space; the control of the environment at the surface of the earth and the provision of environments suitable for human activity deep in the ocean and far out in space; the design

of mechanical components and systems to accomplish these and other ends, together with their manufacture, distribution and use. They are necessarily involved with materials, materials processing, and materials handling, and may work with scientists and engineers in many fields. They are concerned not only with design for function but design for economic ends. They may engage in technical sales work, and mechanical engineers very frequently become part of management as their experience increases.

The Field Program in Mechanical Engineering, leading to the Bachelor of Science degree after four years of study, is designed to provide the student with understanding in some depth of the engineering sciences basic to the field and with an introduction to the professional and technical areas with which mechanical engineering is particularly concerned. The earlier courses in the program necessarily tend toward separate treatment of a particular subject, but the later courses, particularly some in the fourth year, are more integrated to show the interrelation of the many fields of study making up mechanical engineering. The objective is to introduce the student to the complete design of a mechanical engineering system. For those completing the five years of study culminating in the Master of Engineering (Mechanical) degree, this objective of integrated design is taken further, together with the opportunity to undertake a design project requiring considerable individual study.

The liberal course electives prescribed in the core program are scheduled one each term in the third and fourth years, with the two unrestricted electives available in the fourth year. In addition, the program allows for two technical electives in the fourth year, with *technical elective* meaning any course in engineering, science, or mathematics which contributes to the particular educational objective of the student. This elective program allows each student to pursue an option in his undergraduate work, whether it be directed toward a particular branch of technology or as preparation for advanced study.

While there is no requirement of industrial experience for any of the mechanical engineering programs at the present time, all students are urged to obtain summer employment which broadens their knowledge of engineering. This is regarded as particularly desirable for those planning to enter the professional program for the M.Eng. (Mechanical) degree. Full use should be made of the employment opportunities available through the University and College placement services.

The breadth of training in mechanical engineering leads to several possibilities for advanced study following the B.S. degree. If possible, the student should plan his route to advanced work in his third year so that full advantage may be made of the total of four technical and unrestricted electives available in the fourth year. Possible programs of advanced study include:

1. *Graduate study leading to the degree of Master of Engineering (Mechanical).* This is a curricular type of program of a professional nature, intended for those students who wish to practice mechanical

engineering. While the course of study is available for all qualified students who hold a baccalaureate degree in engineering, the program is specially adapted as a graduate year of study integrated with the previous work in the Sibley School of Mechanical Engineering. It is the program commonly taken by qualified students not planning to pursue research or teaching as a career (see ¶2) or not changing their field for advanced work (see ¶3). Details of this program are given on following pages.

2. *Graduate study leading to the degrees of Master of Science or Doctor of Philosophy, with majors in either machine design or thermal engineering.* Students planning to engage in research or teaching as a career would normally enroll in such a program. Information is given in the *Announcement of the Graduate School*.

3. *Graduate study in related Fields, such as Aerospace Engineering, Industrial Engineering or Nuclear Engineering, for example, or in different fields such as Business Administration, Law, or Medicine.*

## Laboratory and Research Facilities

The thermal engineering and machine design laboratories are located in Upson Hall; materials processing laboratories are in Kimball Hall.

In the thermal engineering area, modern instrumentation and techniques are used for regular instruction in the steady and transient state measurement of temperature, heat flow, and properties of flowing fluids. The laboratories are equipped with precision potentiometers, pressure transducers, oscilloscopes, oscillographs, and hot-wire anemometers. Considerable use is made of visualization equipment, such as shadowgraph and schlieren apparatus, flow models, and films. In several courses, the services of the Cornell Computing Center are employed as a necessary adjunct to modern mechanical engineering.

The Department of Machine Design has its own laboratories for stress, photoelastic, vibration, and endurance testing of machine parts as well as for the study of hydraulic and pneumatic controls. Numerous electronic instruments are available for the measurement and recording of force, motion, strain, vibration, and noise. The laboratories are particularly well equipped for studies of lubrication phenomena in journal bearings and for studies requiring the use of analog computers.

The materials processing laboratories, with a generous selection of production-type machine tools, provide undergraduate and research facilities for tool planning, statistical quality control, surface texture, and dynamometric projects. Specially tooled and instrumented equipment for studying tool wear and geometry characteristics, chip formation, work-tool temperature phenomena, and stress patterns is available. For metrology and gaging studies, a constant temperature room is available. The laboratories are well equipped with all standard-type measuring devices, including optical, electronic, and pneumatic comparators.

## The Degree Programs

The undergraduate program in mechanical engineering leads to a Bachelor of Science degree upon the successful completion of a four-year curriculum. The minimum number of credit hours required is 139.

The first two years of this program are given in the Division of Basic Studies and are substantially common to all undergraduate engineering students (see pages 30-34). In the sophomore year, two engineering science sequences are required. Students desiring to pursue a program in mechanical engineering must take the *mechanics* sequence, since it is a prerequisite for junior courses; *materials science* is recommended for the second sequence, but is not required.

In the junior and senior years, fifty-four credit hours of technical courses related to mechanical engineering are required. These include courses in the Mechanical Engineering Departments of Thermal Engineering and of Machine Design and Materials Processing, plus specified courses in industrial engineering/operations research and in materials science and engineering. In addition, eighteen credit hours in liberal and unrestricted electives are required. *Unrestricted electives* may be any courses in the University to which the student can gain admission, including six hours of advanced ROTC.

To be in good standing in the School of Mechanical Engineering, a student must, each term, earn a passing grade in at least fifteen credit hours, with a grade of C minus or better in eleven hours. If he fails in any term to pass twelve hours, he may be suspended from the School. No undergraduate student may take fewer than fifteen credit hours per term.

### BACHELOR OF SCIENCE

#### TERMS 1-4

See Division of Basic Studies Curriculum (pp. 30-34).

\* See page 34 for definition of liberal electives.

## MASTER OF ENGINEERING (MECHANICAL)

The degree of Master of Engineering (Mechanical) is available as a curricular type of professional degree, the general requirements for which are stated on page 16. Of the thirty credit hours required, the Mechanical Engineering program allows nine elective hours together

with considerable latitude in the choice of a laboratory course and the design project. In this way, an option is possible in a particular area, e.g., machine dynamics and control, mechanical analysis and development, vehicles and propulsion, propulsion engines, thermal power, thermal environment, manufacturing engineering, material removal, etc.

The professional degree, Master of Engineering (Mechanical), may be earned in a minimum of two terms of full-time study by the successful completion of the requirements described below.

	<i>Credit Hours</i>
<b>FALL TERM</b>	
Mathematics .....	3
Engineering 3361, Advanced Mechanical Analysis .....	3
Engineering 3651, Advanced Thermal Science .....	3
Engineering Laboratory* or Mechanical Engineering Elective ....	3
Technical Elective .....	3
<b>Total</b> .....	<b>15</b>

	<i>Credit Hours</i>
<b>SPRING TERM</b>	
Mathematics .....	3
Engineering 3055, Advanced Mechanical Engineering Design ....	3
Engineering 3090, Mechanical Engineering Design Project .....	3
Mechanical Engineering Elective or Engineering Laboratory* ....	3
Technical Elective .....	3
<b>Total</b> .....	<b>15</b>
<b>Total for two terms</b> .....	<b>30</b>

\* One Engineering Laboratory course is required, either fall or spring term.

In the curriculum outlined above, it is recommended that the mathematics requirement be satisfied by Applied Mathematics 1150, 1151 or, on a more advanced level, by 1180, 1181. Courses in the Department of Mathematics may be taken with the approval of the adviser.

The *Engineering Laboratory* course may be selected from Experimental Methods in Machine Design, 3372 (fall); Advanced Flow Measurement, 3673 (fall); or Techniques of Thermal Measurement, 3667 (spring). Qualified students may seek approval for other laboratory courses given in the College of Engineering if such courses are acceptable for a particular objective. Mechanical Engineering Design Project, 3090, in the spring term, provides design experience requiring individual effort and the preparation of a formal report. If the six-hour mathematics requirement is previously satisfied when fulfilling undergraduate elective requirements, twenty-one hours of the thirty-hour requirement are, to a large extent, elective. In this way, the student has wide latitude to obtain a specific educational objective.

## M.S. AND PH.D. DEGREES

The Master of Science and Doctor of Philosophy are research degrees that involve residence on the campus and submission of a thesis. The requirements for these degrees are described in the *Announcement of the Graduate School*.

Research studies may be undertaken in the Field of Mechanical Engineering in areas such as heat transfer, fluid mechanics, energy conversion, plasma studies, lubrication, mechanical systems dynamics, stress analysis and machine tools. There is no required pattern of courses; individual programs of formal or informal study are arranged by a student in consultation with a Special Committee of his own selection.

A number of fellowships, research assistantships, and teaching assistantships are available to candidates for the M.S. and Ph.D. degrees who are doing their thesis research in the Field of Mechanical Engineering. Assistantship applications and further information may be obtained from the Field Representative, Sibley School of Mechanical Engineering, Upson Hall.

## NUCLEAR SCIENCE AND ENGINEERING

**DEGREES OFFERED:** Master of Engineering (Nuclear); Master of Science; Doctor of Philosophy.

### NUCLEAR REACTOR LABORATORY

Faculty of Engineering Field of Nuclear Engineering: K. B. Cady, D. D. Clark, T. R. Cuykendall, D. Dropkin, F. Feiner, C. D. Gates, J. P. Howe, S. Linke, R. McPherson, W. E. Meserve, M. Nelkin, R. L. Von Berg.

Faculty of the Graduate Field of Nuclear Science and Engineering: Same as above plus R. M. Littauer and G. H. Morrison.

Nuclear science and nuclear engineering are concerned with the understanding, development, and practical application of the scientific knowledge of nuclear reactions and radiations. In this broad context, nuclear science and engineering treats the production of neutrons, gamma radiation, radioisotopes, and transmutation of elements. The aims of the programs at Cornell are to provide the student with a thorough understanding of the laws and principles upon which nuclear systems are based, to develop research abilities, and to develop the skills of applying basic principles to engineering problems. To implement these aims Cornell offers three graduate degrees: the research degrees, Master of Science and Doctor of Philosophy, administered by the Graduate Field of Nuclear Science and Engineering; and a professional degree, Master of Engineering (Nuclear), administered by the Engineering Field of Nuclear Engineering.

The faculty at Cornell believes the specialized education of nuclear engineers lies at the graduate level; for this reason no Bachelor of Science program in the nuclear field is offered. Appropriate under-

graduate programs which can lead to graduate study in nuclear engineering are civil, chemical, electrical, or mechanical engineering, or engineering physics. In addition, the *College Program* offers a wide range of majors and minors in the above fields as well as a major and minor in nuclear engineering.

Individuals preparing for graduate study in nuclear engineering should select their technical electives carefully to insure that they meet the entrance requirements for the graduate program. Whether or not a student is preparing for graduate study in nuclear engineering, there are a number of courses in the nuclear field available to him as technical electives. These courses are described under the specific engineering field which is in charge of the course content.

Nuclear engineering uses the basic sciences of chemistry, physics, and mathematics, and the skills of metallurgical, chemical, civil, electrical, and mechanical engineering. The nuclear engineering faculty is made up of members from each of these engineering fields as well as from engineering physics.

## Laboratory and Research Facilities

The Nuclear Reactor Laboratory contains: (1) A TRIGA research reactor with a steady-state power of 100 kilowatts and a pulsing capability to 250 megawatts providing sources of neutrons and gamma rays for activation analysis, solid and liquid state studies, and nuclear physics research. In addition to standard pneumatic and mechanical transfer systems for activated specimens, the reactor is equipped with a rapid transfer mechanism in one of the six beam ports; (2) A critical facility or "zero power reactor" of versatile design for basic studies of reactor physics, such as space dependent reactor kinetics and noise analysis; (3) A 3 MeV Cockroft-Walton accelerator for studies of radiation effects and low energy nuclear levels and reactions; (4) A shielded cell with 10,000 curies of  $\text{Co}^{60}$  gamma sources for radiation chemistry studies; (5) A radiochemistry laboratory; and (6) Subcritical assemblies for reactor physics investigations.

## The College Program

Students who wish to begin specialization in nuclear science and engineering at the undergraduate level may consider the following courses subject to the approval of the *College Program* committee.

### MAJOR IN NUCLEAR ENGINEERING

Physics 436, Modern Physics

Engineering Physics 8351, Nuclear Measurements Laboratory

Chemical Engineering 5760, Nuclear and Reactor Engineering

Materials Science and Engineering 6872, Nuclear Materials (same as Engineering Physics 8336)

Engineering Physics 8303, Introduction to Nuclear Engineering

## MINOR IN NUCLEAR ENGINEERING

Physics 436, Modern Physics

Engineering Physics 8303, Introduction to Nuclear Engineering

Engineering Physics 8351, Nuclear Measurements Laboratory

or

Materials Science and Engineering 6872, Nuclear Materials (same as Engineering Physics 8336)

## Master of Engineering (Nuclear)

The professional Master's degree program is a two-term program intended for students who want a terminal degree and for students who want an interim degree before undertaking doctoral study in nuclear science and engineering. The program develops the basic principles of nuclear reactors and shows a student how his field of undergraduate specialization may be applied to nuclear engineering problems. The recommended entrance requirements include:

1. A baccalaureate degree in engineering, applied science, or its equivalent.
2. Physics, including atomic and nuclear physics.
3. Mathematics, including advanced calculus.
4. Thermodynamics.

Students should make every effort to complete the entrance requirements before beginning the program; this may be done in some cases by informal study during the summer. The thirty credit hours for the degree include the following courses:

### FALL TERM

Engineering Physics 8312, Reactor Theory I

Engineering Physics 8333, Nuclear Reactor Engineering

Engineering Elective

Mathematics or Physics Elective

### SPRING TERM

Engineering Physics 8351, Nuclear Measurements Laboratory

Engineering Physics, 8309, Low Energy Nuclear Physics

Engineering Elective

Engineering Design Project

The engineering electives are to be in a subject area relevant to nuclear engineering (e.g., nuclear materials, nuclear chemical engineering, fluid dynamics, heat transfer, energy conversion, automatic feedback control systems). Typical examples of electives taken by the professional Master's degree students are:

Engineering Physics 8334, Nuclear Engineering Seminar

Physics 444, Nuclear and High-Energy Particle Physics

Chemical Engineering 5505, Advanced Heat Transfer

Aerospace Engineering 7201-7202, Magnetohydrodynamics I & II  
 Theoretical and Applied Mechanics 1163, Applied Elasticity  
 Mechanical Engineering 3665, Transport Processes  
 Mechanical Engineering 3672, Energy Conversion

## Master of Science and Doctor of Philosophy

A candidate for a research degree, either the M.S. or Ph.D. degree, may choose as his major subject nuclear science or nuclear engineering. The detailed program of studies is flexible and is not prescribed as a curriculum, but is planned by each individual student and the faculty members of his Special Committee. This system which is the tradition of graduate work at Cornell is well suited for interdisciplinary Fields such as Nuclear Science and Engineering. Formal courses do not dominate the pattern of graduate education. Independent research leading to the writing of a thesis, and formal and informal discussions with staff members and other students, are vital parts of the program.

Typical "core" courses in the major Field of either Nuclear Science or Nuclear Engineering are the following:

Mathematics 415-416, Mathematical Methods in Physics

Physics 561, Theoretical Physics

Physics 572, Quantum Mechanics

Engineering Physics 8309, Low Energy Nuclear Physics

Engineering Physics 8312, Nuclear Reactor Theory

Engineering Physics 8351, Nuclear Measurements Laboratory

At the heart of the research degree programs is the student's thesis research. Areas of research in nuclear science include nuclear chemistry, low energy nuclear physics, theory of neutron interactions with matter, radio-chemistry, radiation chemistry, activation analysis, and radiation detection. Areas of research in nuclear engineering include neutral particle transport theory, reactor statics and dynamics, nuclear materials and fuels, basic processes in the production and use of power from nuclear reactions, and selected problems in nuclear reactor design and optimization.

Additional information on the M.S. and Ph.D. programs is available in the *Announcement of the Graduate School*. Further information may be obtained from the Graduate Field Representative, Nuclear Reactor Laboratory.

## THEORETICAL AND APPLIED MECHANICS

DEGREES OFFERED: Master of Science; Doctor of Philosophy.

### THURSTON HALL

Mr. E. T. Cranch, Chairman; Messrs. K. T. Alfriend, H. D. Block, H. D. Conway, M. D. Greenberg, R. J. Knops, R. H. Lance, G. S. S. Ludford, J. P. Moran, J. R. Moynihan, Y. H. Pao, D. N. Robinson.

The Department of Theoretical and Applied Mechanics is responsible for undergraduate and graduate instruction and research in theoretical and applied mechanics and applied mathematics. Subject matter in these fields is of a fundamental nature, and the undergraduate courses provide a substantial part of the basic engineering science education for engineering students. In addition to the required courses in theoretical and applied mechanics and applied mathematics, the undergraduate can elect advanced courses. Such courses are especially suited to students who have demonstrated superior analytical or experimental ability and who wish to extend and develop this ability. The Department offers major and minor individualized, planned programs in the newly initiated *College Program* (see page 47).

The graduate program in mechanics and applied mathematics emphasizes fundamental understanding of the newest developments in engineering and applied science. Graduate students are exposed to the mechanics of liquids, gases, particles, rigid and deformable solids, and related areas of materials, mathematics, and physics. The analytical nature of the studies encourages research that cuts across various fields. Graduate students pursue programs in the following areas of specialization: (1) space mechanics — including research on trajectories and orbits of space vehicles and satellites as well as the theory of light-weight, thin-walled structures; (2) wave propagation in solids — with research on the dynamic response of plates, structures, and machine elements; (3) structural mechanics including static and dynamic loading, vibrations, and buckling; (4) theory of elasticity and plasticity; (5) theoretical fluid mechanics — with research in magnetohydrodynamics.

The flexibility of the graduate study programs at Cornell permits students to draw on several divisions of the University for supporting work in pure and applied science. Graduate students interested primarily in theoretical and applied mechanics and applied mathematics find these supporting fields of interest: mathematics, structures, engineering physics, servomechanisms, machine design, aerospace engineering, soil mechanics, and physics.

A brochure, *Graduate Study in Theoretical and Applied Mechanics* can be obtained by writing the Graduate Field Representative, Theoretical and Applied Mechanics, Thurston Hall.

## DESCRIPTION OF COURSES

Course descriptions are listed under the school, department, or division in which they are offered. Certain English, mathematics, and physical science courses are listed under the Basic Studies Division, even though they are offered by the College of Arts and Sciences. For more complete listings in humanities, social science, and natural sciences, consult the *Announcement of the College of Arts and Sciences*.

Each course title is followed by a (u) or (g) designation to indicate the level at which the course is taught. The (u) designation means that the course is intended primarily for undergraduates, and the (g), for graduates. In many instances, both undergraduates and graduates are welcome in particular courses if they meet the prerequisites. Undergraduates should consult their school or department adviser concerning eligibility for courses with graduate designations.

Descriptions of courses will be found in this section of the Announcement as follows:

Aerospace Engineering	Industrial Engineering/Operations
Agricultural Engineering	Research
Division of Basic Studies	Materials Science and Engineering
Chemical Engineering	Mechanical Engineering
Civil Engineering	Nuclear Science and Engineering
Computer Science	(see Engineering Physics)
Electrical Engineering	Theoretical and Applied Mechanics
Engineering Physics	

### AEROSPACE ENGINEERING

#### 7101. ADVANCED KINETIC THEORY (g)

Credit 3 hrs. Fall. The Boltzmann equation. Solution for gas in equilibrium. Collision frequency and mean free path calculations. Conservation equations. Review of Enskog-Chapman theory of transport coefficients. Grad's thirteen moment equations. The BGK equation. The BBGKY theory.

#### 7102. GASDYNAMICS (g)

Credit 3 hrs. Spring. Strong shock waves and their use in the production and study of high temperature gases. High temperature chemical kinetics and its application to hypersonic external flows, rocket internal flows, and other phenomena of current interest. Chemical relaxation effects on flow fields and the method of characteristics including chemical reactions. Experimental techniques.

#### 7103. DYNAMICS OF RAREFIED GASES (g)

Credit 3 hrs. Spring. Prerequisite, 7101. Flow regimes according to the Knudsen number. Theories of the shock structure at high Mach numbers. Boundary conditions at a solid wall. Slip-flow conditions. Free-molecule flows. Eigen function expansion of the linearized Boltzmann equation. Full-range and half-range moment methods. The model equation approach and recent developments for handling the transition regime.

**7104. ADVANCED TOPICS IN HIGH TEMPERATURE****GASDYNAMICS (g)**

Credit 3 hrs. Either term. Prerequisites, 7101, 7102. Current topics relating to present engineering practice and/or research interests of the faculty and staff.

**7201. INTRODUCTORY PLASMADYNAMICS (g)**

Credit 3 hrs. Fall. Macroscopic and microscopic properties of plasmas. Wave motion and stability. Character of laboratory-produced and naturally occurring plasma systems. Application to power conversion and space propulsion. Introduction to controlled thermonuclear research. (Reference text: *Plasma Physics in Theory and Application*, Ed. W. B. Kunkel.)

**7202. INTRODUCTORY MAGNETOHYDRODYNAMICS (g)**

Credit 3 hrs. Spring. Basic equations of magnetohydrodynamics. Flow problems. Hydromagnetic shock waves. The pinch effect and instabilities. Tensor conductivity and excess electron temperature.

**7203. INTERMEDIATE PLASMA PHYSICS (g)**

Credit 3 hrs. Spring. Prerequisite, 4561 or 7201 or equivalent. Collective oscillations in a cold plasma; waves in a warm plasma; application to natural phenomena. Non-linear theory of collision-free shocks. Quantum effects in solid state plasma waves; plasma-phonon interactions. Introduction to radiation and scattering in plasmas. (At the level of *Theory of Plasma Waves*, Stix; and *Radiation Processes in Plasmas*, Bekefi.)

**7301. FLUID MECHANICS I (g)**

Credit 3 hrs. Fall. The continuum and the stress tensor. Vectors and tensors. Hydrostatics. Strain and rate-of-strain tensors. Constitutive equations. The ideal elastic continuum. Equilibrium and compatibility equations, boundary conditions. Plane stress and strain. The stress function. Elastic energy. Venant's principle. The Newtonian fluid, viscosity and bulk viscosity Navier-Stokes equations. Poiseuille flow, Rayleigh and Stokes problems. The concept of the boundary layer. The ideal-fluid approximation, Kelvin and Helmholtz theorems. Irrotational flows.

**7302. AERODYNAMICS (g)**

Credit 3 hrs. Spring. Laplace's equation. Source, sink, and doublet. Vortices. Boit-Savart theorem, the flow field of a vortex. Spherical and cylindrical harmonics. Methods of singularity distributions. Complex-variable methods. Wing theory. Acoustics. Compressible flows, subsonic and supersonic. Shock waves. Hypersonic flow. Rotational flows. Magnetohydrodynamics. Flow in the boundary layer, Prandtl theory. Heat transfer, separation.

**7303. COMPRESSIBLE FLUID FLOW (g)**

Credit 3 hrs. Fall. Aerodynamics of compressible fluids. Brief review of linear theories. Improvements on linear theory. Sonic boom. Role of entropy in supersonic flows. Shock wave interactions. Exact theories; method of characteristics for rotational reacting flows; hodograph transformation; conical flows. Transonic flow theory and similitude. Viscous effects in compressible flows. Other topics of current interest.

**7304. THEORY OF VISCOUS FLOWS (g)**

Credit 3 hrs. Fall. Prerequisites, 7301, 7302. Exact solutions of the Navier-Stokes equations. The small Reynolds number approximation. The boundary layer theory and the techniques for its solution. Compressibility effects. Stability of laminar flows. Turbulence.

**7305. HYPERSONIC FLOW THEORY (g)**

Credit 3 hrs. Spring. Prerequisites, 7301, 7302. Hypersonic small disturbance theory and the related similitude; blast wave analogy; entropy layers. Newtonian theory and shock layer structure. Constant density solutions. The blunt body problem; numerical techniques. Viscous and real gas effects: ideal dissociating gas; viscous interactions; other real gas phenomena.

**7801. RESEARCH IN AEROSPACE ENGINEERING (g)**

(Credit to be arranged.) Prerequisite, admission to the Graduate School of Aerospace Engineering and approval of the Director. Independent research in a field of aerospace science. Such research must be under the guidance of a member of the staff and must be of a scientific character.

**7901. AEROSPACE ENGINEERING COLLOQUIUM (g)**

Credit 1 hr. Lectures by Cornell staff members, graduate students, and visiting scientists on topics of interest in aerospace science, especially in connection with new research.

**7902. SEMINAR IN AEROSPACE ENGINEERING (g)**

Credit 2 hrs. Prerequisite, approval of the Director. Study and discussion of topics of current research interest in aerospace engineering. Members of the seminar will prepare and deliver reports on these topics, based on published literature.

**7903. PLASMA PHYSICS COLLOQUIUM (g)**

Credit 1 hr. Fall and spring. Lectures by staff members, graduate students, and visiting scientists on topics of current interest in plasma research.

## AGRICULTURAL ENGINEERING

(For a complete description of the courses in agriculture, see the *Announcement of the College of Agriculture*.)

**152. INTRODUCTION TO AGRICULTURAL ENGINEERING MEASUREMENTS (u)**

Credit 3 hrs. Spring. 1 Lect., 2 Lab. A study of the principles and methods of engineering measurements. Fundamentals of measurement, sources of errors, and measurement systems will be considered, with emphasis upon surveying measurements. Special attention will be given to methods for obtaining measurements that are required in a variety of agricultural engineering problems. CUPL, the Cornell computing language, will be taught, and used in the solution of these problems.

**153. ENGINEERING DRAWING (u)**

Credit 3 hrs. Fall. 2 Lect., 1 Lab. Designed to promote an understanding of the engineer's universal graphic language. The lectures will deal primarily with spatial relationships involving the problem-solving techniques of descriptive geometry. The laboratories will develop a working knowledge of drawing conventions, standard and advanced drafting techniques, and their application to machine, architectural, and pictorial drawing problems. Graphs and engineering graphics (nomography and graphical calculus) will also be included. Students will accomplish their work with drafting machines as well as the standard T-square and board. The first half of the laboratory will be utilized as an instruction-recitation period.

**450. SPECIAL TOPICS IN AGRICULTURAL ENGINEERING (u)**

Credit 1 hr. Spring. Open only to seniors. Presentation and discussion of the opportunities, qualifications, and responsibilities for positions of service in the various fields of agricultural engineering.

**[461. AGRICULTURAL MACHINERY DESIGN (u,g)]**

Credit 3 hrs. Spring. 2 Lect., 1 Lab. Prerequisite, Engineering 3331 or the equivalent. The principles of design and development of agricultural machines to meet functional requirements. Emphasis is given to computer-aided analysis and design, stress analysis, selection of construction materials, and testing procedures involved in agricultural machine development. Not given in 1967-68.

**462. AGRICULTURAL POWER (u,g)**

Credit 3 hrs. Fall. 2 Lect., 1 Lab. and computing periods. Prerequisite, Engineering 212, or the equivalent. Basic theory, analysis, and testing of internal combustion engines specifically for use in farm tractors, and other agricultural power applications. Tractor transmissions, Nebraska Tractor Tests, soil mechanics related to traction stability, shop dynamometers, fuels, hydraulic equipment.

**[463. PROCESSING AND HANDLING SYSTEMS FOR AGRICULTURAL MATERIALS (u,g)]**

Credit 4 hrs. Spring. 3 Lect., 1 Lab. Processes such as size reduction, separation, metering, drying, and refrigeration will be studied. Psychrometrics, fluid flow measurement, and an introduction to systems engineering and electrical controls for agricultural applications are included. Not given in 1967-68.

**471. SOIL AND WATER ENGINEERING (u,g)**

Credit 3 hrs. Spring. 3 Lect., 1 Lab. every other week. Prerequisites, Engineering 3632 and Agronomy 200, or their equivalents. The application of engineering principles to the problems of soil and water control in agriculture. Includes design and construction of drainage systems and farm ponds, design and operation of sprinkler systems for irrigation.

**481. AGRICULTURAL STRUCTURES (u,g)**

Credit 3 hrs. Spring. 2 Lect., 1 Lab. Prerequisites, Engineering 2701 and 3621. Synthesis of complete farmstead production units, including structures, equipment, and management techniques. Integrated application of structural theory, thermodynamics, machine design, and methods engineering to satisfy biological and economic requirements.

**491. LOW-COST ROADS (u,g)**

Credit 3 hrs. Primarily for applications to developing countries. Offered upon sufficient demand, usually in fall term. Prerequisite, consent of instructor. Principally directed study with one 2½-hour class session per week. Study of economic considerations in road system improvement; road improvement planning and programing; road location and geometric design; engineering soil characteristics and classification; design of roadbed thickness; drainage; stabilization methods and materials; dust palliatives; wearing surfaces.

**501. SIMILITUDE ENGINEERING (g)**

Credit 3 hrs. Spring. 2 Lect., 1 Lab. Similitude methodology, including the use of dimensional analysis to develop general equations to define physical phenomena; model theory; distorted models; and analogies, including the use of electronic analog computers. Introduction to a variety of applications in

engineering. It is preferred that students know how to program in Fortran, although knowledge of CUPL is acceptable.

#### 502. INSTRUMENTATION (g)

Credit 3 hrs. Fall. 2 Lect., 1 Lab. Permission of instructor. Application of instrumentation to physical and biological measurements in agricultural and biological research, including measurement of force, displacement, velocity, acceleration, pressure flow of materials, electric and magnetic quantities, temperature, humidity, chemical composition analysis, particle size, and electric magnetic radiation with emphasis on transducers and recording methods.

#### 504. BIOLOGICAL ENGINEERING ANALYSIS (g)

Credit 3 hrs. Fall. 3 Lect. Prerequisite, consent of instructor, or Engineering 1151. Engineering problem-solving techniques will be treated. Particular attention will be given to the formulation of biological problems in an engineering context. Experience will be gained in problem definition, mathematical formulation, and interpretation of results. Principles of feedback control theory will be studied and applied to biological systems.

#### 551-552. AGRICULTURAL ENGINEERING PROJECT (g)

Total credit 6 hrs. (Required for M.Eng. degree) Comprehensive design projects utilizing real engineering problems to present fundamentals of agricultural engineering design. Emphasis on formulation of alternate design proposals, including economics and nontechnical factors, and complete design of the best alternative.

#### 600. SPECIAL TOPICS (g)

Credit 1 or more hrs. Fall or spring. Special work in any area of agricultural engineering on problems of special interest to the students and faculty.

#### 601. GENERAL SEMINAR (g)

Fall and spring. Fall term required of all graduate students majoring in Field. Spring term, optional.

#### 602. POWER AND MACHINERY SEMINAR (g)

#### 603. SOILS AND WATER ENGINEERING SEMINAR (g)

#### 604. AGRICULTURAL STRUCTURES SEMINAR (g)

Seminars 602, 603, 604. Credit 1 hr. Spring. Thorough investigation and discussion of research or new developments in an area of special interest to those enrolled.

## BASIC STUDIES DIVISION

### Engineering Problems and Methods

#### 103. ENGINEERING GRAPHICS AND DESIGN (u)

Credit 3 hrs. Either term. 1 Lect., 1 Rec., 1 Lab. Fundamentals of the engineering graphic language including orthographic drawing and sketching, pictorial drawing and sketching, auxiliaries, sections, intersections, and developments. Instrument drawings will show applications of visual communication in the design process. Freehand conceptual design.

**104. INTRODUCTION TO ENGINEERING (u)**

Credit 3 hrs. Either term. 2 Lect., 1 Lab. Orientation to the engineering profession: discussion of curriculum, engineering functions, engineering fields, introduction to technical report writing. Digital computing: machine language, problems, and computer applications. Engineering design: analysis of factors such as safety, reliability, efficiency, and economy that contribute to sound design.

## Mathematics

**191. CALCULUS FOR ENGINEERS (u)**

Either term. Credit 4 hrs. Prerequisite, three years of high school mathematics, including trigonometry. Fall term: lectures, MWF 9:05, 11:15 plus recitation periods to be arranged. Spring term: MWFS 9:05, 11:15. Preliminary examinations will be held at 7 P.M. on Oct. 4, Oct. 15, Nov. 15, Dec. 5. Fall term. Plane analytic geometry, differential and integral calculus, applications.

**193. CALCULUS FOR ENGINEERS (u)**

Fall term. Credit 4 hrs. Prerequisite, four years of high school mathematics, including trigonometry and calculus. Lectures MWF 9:05, 11:15 plus recitation periods to be arranged. Preliminary examinations will be held at 7 P.M. on Oct. 4, Oct. 15, Nov. 15, Dec. 6. Plane analytic geometry, differential and integral calculus, applications.

**192. CALCULUS FOR ENGINEERS (u)**

Either term. Credit 4 hrs. Prerequisite, 191 or 193. Fall term: MWFS 9:05, 11:15. Spring term: lectures, MWF 9:05, 11:15 plus recitation periods to be arranged. Preliminary examinations will be held at 7 P.M. on Feb. 14, Mar. 6, Apr. 3, May 1. Spring term. Transcendental functions, technique of integration and multiple integrals, vector calculus, analytic geometry in space, partial differentiation, applications.

**194. CALCULUS FOR ENGINEERS (u)**

Spring term. Credit 4 hrs. Prerequisite, recommendation of the lecturer in course 191 or 193. Lectures MWF 9:05, 11:15 plus recitation periods to be arranged. Preliminary examinations will be held at 7 P.M. on Feb. 14, Mar. 6, Apr. 3, May 1. Covers contents of Course 192 in more detail and includes more theoretical material.

**293-293H. ENGINEERING MATHEMATICS (u)**

Either term. Credit 4 hrs. Prerequisite, 192 or 194. Fall term: lectures, MWF 8, 12:20 plus recitation periods to be arranged. Spring term: MWFS 9:05, 11:15. Preliminary examinations will be held at 7 P.M. on Oct. 10, Nov. 7, Dec. 5. Fall term. 293H is an honors section of 293 in fall term only. Vectors and matrices, first order differential equations, infinite series, complex numbers, applications. Problems for programming and running on the automatic computer will be assigned, and students are expected to have a knowledge of computer programming equivalent to that taught in Engineering 104.

**294-294H. ENGINEERING MATHEMATICS (u)**

Either term. Credit 3 hrs. Prerequisite, 293. Fall term: MWF 8, 12:20. Spring term: lectures, MW 8, 12:20 plus recitation periods to be arranged. Preliminary examinations will be held at 7 P.M. on Feb. 27, Mar. 19, Apr. 30.

Spring term. 294H is an honors section of 294 in spring term only. Linear differential equations, quadratic forms and eigenvalues, differential vector calculus, applications.

## Physics

### 121-122. INTRODUCTORY ANALYTICAL PHYSICS I AND II (u)

Throughout the year. (Physics 121 is also offered in the spring term, TThS 9:05, for those students who have completed but failed the course in the preceding fall term; permission of the instructor is required.) Credit 3 hrs. a term. Prerequisite, calculus or coregistration in Mathematics 191-192 or 193-194, or consent of the instructor. F 9:05 or 11:15 or 1:25. Two discussion periods per week and one two-hour laboratory period every other week, as assigned. Preliminary examinations will be held at 7:30 P.M. on Oct. 3, Nov. 7, Dec. 5, Feb. 27, Apr. 2, Apr. 30. The mechanics of particles: kinematics, dynamics, conservation of energy, conservation of linear momentum, circular motion, special relativity. Rotation of rigid bodies. Harmonic motion. The properties of the fundamental forces: gravitational, electromagnetic, and nuclear. Kinetic-molecular theory of gases and introductory thermodynamics. At the level of *Introductory Analytical Physics*, fourth edition, by Newhall.

### 233-234. INTRODUCTORY ANALYTICAL PHYSICS III AND IV (u)

Throughout the year. (Physics 233 is also offered in the spring term, TThS 11:15, for those students who failed the course in the preceding fall term but who have passed Physics 235 or the equivalent.) Credit 3 hrs. a term. Prerequisites, Physics 122 and coregistration in Physics 235-236 and in Mathematics 293-294, or equivalent. Course 233 is prerequisite to 234 (233-234 and 235-236 replace former 223-224 or 225-226). Lectures: TTh 9:05, 11:15, 12:20. Two discussion periods every week, as assigned. A survey of electric and magnetic fields including a review and an extension of the study of static fields and their sources. Fields in simple dielectrics, charges in motion, time-varying fields, induced electromotive force, fields in magnetic materials, energy of charge and current distributions, electrical oscillations, electromagnetic waves; reflection, refraction, dispersion, and polarization. Superposition of waves; interference and diffraction. Selected topics from contemporary physics such as relativity, quantum effects, atomic and X-ray spectra, nuclear structure and reactions, particle physics, solid state physics. At the level of *Physics for Students of Science and Engineering*, 1966, by Halliday and Resnick, and of *Elementary Modern Physics* by Weidner and Sells.

### 235-236. PHYSICS LABORATORY (u)

Throughout the year. Credit 1 hr. a term. Must be taken with Physics 233-234. Course 235 is prerequisite to 236. (235-236 is the laboratory part of former 223-224 or 225-226.) One two-hour period every week, as assigned. Experiments include electrical measurements, physical electronics, optics, solid-state and nuclear physics.

### 237-238. INTRODUCTORY ANALYTICAL PHYSICS III AND IV (u)

Throughout the year. Credit 4 hrs. a term. Prerequisites, Physics 121-122 and invitation from the instructor. Essentially an honors section of 233-234 and 235-236. Enrollment limited to about forty. Course 237 is prerequisite to 238. TWThF 9:05 and one 2½-hour laboratory period every week, as assigned.

Topics include all those in Physics 233-234 and 235-236, but their treatment is generally more analytical and somewhat more intensive. At the level of *Electricity and Magnetism* by Purcell, *Optics* by Rossi, and *Elementary Modern Physics* by Weidner and Sells.

## Chemistry

### 107-108. GENERAL CHEMISTRY (u)

Throughout the year. Credit 3 hrs. fall term and 4 hrs. spring term. Prerequisite, high school chemistry; 107 is prerequisite to 108. Recommended for those students who will take further courses in chemistry.

*Division A:* Lectures, T Th 9:05 or 10:10. Laboratory, W F or S 8-11, T or Th 1:25-4:25. Scheduled preliminary examinations may be held in the evenings. In spring term, one additional recitation hour as arranged.

*Division B:* Lectures, T Th 12:20 or 1:25. Laboratory, M W or F 1:25-4:25, T or Th 8-11. Scheduled preliminary examinations may be held in the evenings. In spring term, one additional recitation hour as arranged.

Lectures, laboratory, and recitation must be taken within the same division throughout the year.

The important chemical principles and facts are covered, with considerable attention given to the quantitative aspects and to the techniques that are important for further work in chemistry. Second-term laboratory includes a systematic study of qualitative analysis.

*Note:* Entering students exceptionally well prepared in chemistry may receive advanced credit for Chemistry 107-108 by demonstrating competence in the Advanced Placement Examination of the College Entrance Examination Board, or in advanced standing examination given at Ithaca on the Saturday before classes start in the fall.

### 115-116. GENERAL CHEMISTRY AND INORGANIC QUALITATIVE ANALYSIS (u)

Throughout the year. Credit four hours a term. Prerequisite, high school chemistry and physics at a grade of 90 or higher; Chemistry 115 is prerequisite to Chemistry 116. Coregistration in a calculus course at the level of Mathematics 111 or 181 and/or high school calculus required. Recommended for students who intend to specialize in chemistry or in closely related fields. Enrollment limited to 120. Fall term: lectures, M W F 12:20; one laboratory period, T or Th 10:10-1:10, W or F 8-11, or W or F 1:25-4:25. Spring term: lectures, M W 12:20; two laboratory periods, T Th 10:10-1:10; W F 8-11; W F 1:25-4:25; M 8-11, Th 1:25-4:25; M T 1:25-4:25; or S 8:00-1:10.

An intensive, systematic study of the laws and concepts of chemistry, with considerable emphasis on mathematical aspects. Laboratory work will cover both qualitative and quantitative analysis.

### 285-286. INTRODUCTORY PHYSICAL CHEMISTRY (u)

Throughout the year. Credit 5 hrs. a term. Prerequisites, Chemistry 108 or 116, Mathematics 192, Physics 122, or consent of the instructor. For students in the College of Engineering, not open to students in the College of Arts and Sciences. Lectures: M W F 9:05. Laboratory lecture: F 12:20. Laboratories to be arranged. The lectures will give a systematic treatment of the fundamental principles of physical chemistry. The laboratory will deal with the experimental aspects of the subject and also develop the needed skills in quantitative chemical analysis.

## Engineering Sciences

### 241-242. ELECTRICAL SCIENCE I AND II (u)

Credit 3 hrs. Throughout the year. 3 Lect.-Rec. Prerequisites, Mathematics 192 and Physics 122 and coregistration in Mathematics 293 and Physics 223. An integrated sequence providing an introduction to modern electrical engineering. Simple models are developed for a wide variety of electrical devices, and interactions between several devices are considered. Analytical and graphical techniques for calculating responses to various excitations of simple electrical systems containing these devices are included. Indicative of the types of systems considered are: networks of linear resistances and capacitances subjected to steady and sinusoidal excitations; circuits triode and transistor amplifiers; inductive systems, both linear and nonlinear, such as transformers and elementary electromechanical transducers; and simple distributed systems such as transmission line and resonators. Throughout the sequence, emphasis is placed upon the physical principles underlying system behavior.

### 211. MECHANICS OF RIGID AND DEFORMABLE BODIES I (u)

Credit 4 hrs. Fall-spring. 1 Lect., 2 Rec., 1 (2½-hour) Comp.-Lab. Prerequisites, coregistration in Math. 293 and Physics 223. Force systems and equilibrium. Distributed forces, static friction, statically determinate plane structures. Concepts of stress and strain. Shearing force, bending moment, bending and tension of beams. Analysis of plane stress and strain, combined stress, thermal stress. Theories of failure. Instability of columns. (Evening prelims.)

### 212. MECHANICS OF RIGID AND DEFORMABLE BODIES II (u)

Credit 4 hrs. Spring-summer. 1 Lect., 2 Rec., 1 (2½-hour) Comp.-Lab. Prerequisite, Mechanics 211. Inelastic behavior. Energy methods in mechanics. Principles of particle dynamics. Theory of oscillations. Kinematics of rigid body motion. Dynamics of systems of particles. Kinetics of rigid bodies. (Evening prelims.)

### 6210. MATERIALS SCIENCE (u)

Credit 3 hrs. Fall-spring. 2 Lect.; 1 Lab., 1 Rec., alternate weeks. An introduction to physical chemistry and materials science for engineering students. States of matter and the relation between molecular structure and physical properties. Thermochemistry. Equilibrium in heterogeneous systems. Electrochemical phenomena. Surface chemistry. Reaction rates in gases and condensed systems. Atomic and ionic transport processes.

### 6211. MATERIALS SCIENCE (u)

Credit 3 hrs. Spring. 2 Lect.; 1 Lab., 1 Rec. alternate weeks. An introduction to materials science for engineering students. Includes basic concepts and their application to selected properties of solids and selected areas of processing of materials. The concepts include bonding of atoms in molecules and crystals, energy bands, ideal and nonideal crystalline and noncrystalline structures, micro-structures, equilibrium behavior of materials and kinetic behavior of materials. Plastic deformation, creep, fatigue, ferromagnetism, conductivity in metals, semiconductivity and superconductivity are included, as are processing by solidification, sintering, zone refining, heat treating and plastic working.

## 94 COURSES — CHEMICAL ENGINEERING

### 5101. MASS AND ENERGY BALANCES (Chemical Engineering) (u)

Credit 3 hrs. Fall. 3 Lect., 1 Comp. period. Parallel, Physical Chemistry 285. Engineering problems involving material and energy balances. Flow-sheet systems and balances. Total energy balances for flow systems.

### 5102. EQUILIBRIA AND STAGED OPERATIONS

(Chemical Engineering) (u)

Credit 3 hrs. Spring. 3 Lect., 1 Comp. period. Parallel, Physical Chemistry 286. Phase equilibria and phase diagrams. The equilibrium stage, mathematical description of single and multistage operations, analytical and graphical solutions.

## Physical Education

All undergraduate students are required by the University to complete four terms of work in physical education. The requirement must be completed within the first four terms (for further details, see the *Announcement of General Information*). Descriptions of the physical education courses offered will be found in publications made available to entering students by the Department of Physical Education and Athletics.

## CHEMICAL ENGINEERING

### 5041. NONRESIDENT LECTURES (g)

Fall. 1 Lect. Given by lecturers invited from industry and from certain selected departments of the University for the purpose of assisting students in their transition from college to industrial life.

### 5101. MASS AND ENERGY BALANCES (u)

Credit 3 hrs. Fall. 2 Lect., 1 Comp. Parallel, Physical Chemistry 285. Engineering problems involving material and energy balances. Flow-sheet systems and balances. Total energy balances for flow systems.

### 5102. EQUILIBRIA AND STAGED OPERATIONS (u)

Credit 3 hrs. Spring. 2 Lect., 1 Comp. Parallel, Physical Chemistry 286. Phase equilibria and phase diagrams. The equilibrium stage; mathematical description of single and multistage operations; analytical and graphical solutions.

### 5103. CHEMICAL ENGINEERING THERMODYNAMICS (u)

Credit 3 hrs. Fall. 3 Lect. Prerequisites, Chemistry 285, 286. A study of the first and second laws with application to batch and flow processes. Physical and thermodynamic properties. Availability; free energy; chemical equilibrium. Application to gas compression; process steam; power generation; adiabatic reactors; and chemical process development.

### 5105. ADVANCED CHEMICAL ENGINEERING THERMODYNAMICS (g)

Credit 3 hrs. Spring. 3 Lect. Prerequisite, 5104 or equivalent. Application of the general Thermodynamics method to advanced problems in chemical engineering. Evaluation, estimation, and correlation of properties. Chemical and phase equilibria.

**5106. REACTION KINETICS AND REACTOR DESIGN**

Credit 3 hrs. Spring. 3 Lect. Prerequisite, 5103. A study of chemical reaction kinetics and principles of reactor design for chemical processes.

**5107. ADVANCED REACTION KINETICS (g)**

Credit 3 hrs. Fall. 3 Lect. Primarily for graduate students. Effects of heat transfer, diffusion, and nonideal flow on reactor performance. Optimum design for complex reactions. Analysis of current literature on topics such as partial oxidation, catalytic cracking, hydrogenation, and polymerization.

**5108. COLLOIDAL AND SURFACE PHENOMENA (g)**

Credit 3 hrs. Fall. Prerequisite, physical chemistry. Lectures, demonstrations, and problems in the physics and chemistry of small particles and surface films. Topics include surface energy, surface films, electrokinetics, and colloidal behavior.

**5161. PHASE EQUILIBRIA (g)**

Credit 3 hrs. Fall. 3 Lect. Prerequisite, physical chemistry. A detailed study of the pressure-temperature-composition-relations in binary and multicomponent heterogeneous systems where several phases are of available composition. Prediction of phase data.

**5203. CHEMICAL PROCESSES (u)**

Credit 4 hrs. Spring. 4 Lect. An analysis of important chemical processes and industries.

**5205. CHEMICAL PROCESS SEMINAR (g)**

Credit 2 hrs. Fall. For graduate students. A discussion of recent advances in chemical process development.

**5256. MATERIALS (u)**

Credit 4 hrs. Spring. 4 Lect. Prerequisites, 5101, 5102, Chem. 285, 286. An introductory presentation of the nature, properties, treatment, and applications of the more important metals and alloys, including extractive and physical metallurgy and behavior under service conditions. Nonmetallic materials, including refractories and cement, are also discussed.

**5303. ANALYSIS OF STAGE PROCESSES (u)**

Credit 3 hrs. Fall. 2 Lect., 1 Comp. Prerequisites, 5101 and 5102. An analysis of separations involving mass transfer in stage processes. Design variables, binary and multicomponent system calculations, efficiencies, and cost estimation for stage processes are considered.

**5304. INTRODUCTION TO RATE PROCESSES (u)**

Credit 3 hrs. Spring. 2 Lect., 1 Comp. Prerequisite, 5303. An introduction to fluid mechanics, heat and mass transfer.

**5353. UNIT OPERATIONS LABORATORY (u)**

Credit 3 hrs. Fall. 2 Lect., 1 Lab. Prerequisite, 5304. Laboratory experiments in fluid dynamics, heat transfer, and mass transfer. Correlation and interpretation of data. Technical report writing.

**5354. PROJECT LABORATORY (u)**

Credit 3 hrs. Spring. Prerequisite, 5353. Special laboratory projects involving bench-scale or pilot-plant equipment.

5505, 5506. ADVANCED TRANSPORT PHENOMENA (g)

Credit 4 hrs. each term. Fall-spring. An integrated treatment of momentum, mass and heat transfer. Molecular transport; the equations of change; viscous laminar flow of Newtonian and non-Newtonian fluids; perfect fluid theory; boundary layer theory; unsteady-state transfer; penetration theory models of mass and heat transfer; flow stability; turbulent transport; simultaneous heat and mass transfer; applications to industrial operations.

5605, 5606, 5607, 5608. DESIGN PROJECT (g)

Credit variable. Fall and spring. Individual projects involving the design of chemical processes and plants. Estimation of costs of construction and operation, variation of costs and profits with rate of production, etc.

5609. ANALYSIS AND DESIGN OF PROCESS EQUIPMENT (g)

Credit 3 hrs. Fall. 3 Lect. Prerequisite, 5304 or consent of instructor. Discussion and analysis of operating principles, design, and selection of chemical process equipment.

5621. PROCESS DESIGN AND ECONOMICS (g)

Credit 6 hrs. Fall. Prerequisites, 5104, 5204, 5304. Methods for estimating capital and operating costs. Performances, selection, design, and cost of process equipment. Process development and design. Market research and survey.

5622. PROCESS AND PLANT DESIGN (g)

Credit 6 hrs. Spring. Prerequisite, 5621. Continuation of 5621. Process design, including reactors, process equipment, and separating systems. Layout and model of process units. Plant location, design, and layout. Cost estimates and project evaluation.

[5631. SEPARATION PROCESSES (g)]

Credit 3 hrs. Fall. Prerequisite, 5305. Problems involving the optimum design of equipment for the physical separation of chemical mixtures. Primarily for graduate students. Not offered in 1967-68.

[5632. PROCESS EVALUATION AND DESIGN (g)]

Credit 4 hrs. Spring. Prerequisite, 5631. Techniques and case studies in evaluating chemical processes. Cost estimation for processes, equipment, and plant. Not offered in 1967-68.

5635. MARKETING OF CHEMICAL PRODUCTS (g)

Credit 3 hrs. Fall. 3 Lect. Prerequisite, 5621. Examination of marketing activities, organizations, and costs in the distribution of chemicals. Chemical prices. A market research project is required.

5636. ECONOMICS OF THE CHEMICAL ENTERPRISE (g)

Credit 3 hrs. Spring. 3 Lect. Prerequisite, 5622. Research economics; feasibility studies; information services; venture analysis; depreciation and amortization; planning.

5641. INVENTIONS, PATENTS, AND TRADE SECRETS (g)

Credit 3 hrs. Fall. Prerequisite, or parallel, 5621. Protection of inventions and trade secrets. Statutory and other legal requirements for patentability of inventions. Evaluation of patents. Role and management of patents in planning growth and expansion into new product lines.

**5642. DEVELOPMENT ECONOMICS (g)**

Credit 3 hrs. Spring. Prerequisites, 5621, 5622, and 5641. Planning, evaluation, and management of development activities in the process industries, as related to research, processing, new products, markets, and long-range growth.

**5717. PROCESS CONTROL (g)**

Credit 3 hrs. Spring. 2 Lect., 1 Lab. Prerequisite, 5304. Dynamic response of processes and control instruments. Use of frequency response analysis, Laplace transforms, and electronic analogs to predict the behavior of feedback control systems.

**5741. PETROLEUM REFINING (g)**

Credit 3 hrs. Spring. 3 Lect. Prerequisite, 5304. A critical analysis of the processes employed in petroleum refining.

**5742. POLYMERIC MATERIALS (u)**

Credit 3 hrs. Fall. 3 Lect. Credit not allowed for both 5256 and 5742. Chemistry and physics of the formation and characterization of polymers. The engineering applications of polymers as plastics, fibers, rubbers, and coatings.

**5743. PROPERTIES OF POLYMERIC MATERIALS (g)**

Credit 3 hrs. Spring. 3 Lect. Prerequisite, 5256 or 5742. Phenomenological aspects and molecular theories of non-Newtonian flow, viscoelasticity, and ultimate tensile properties. Special topics.

**5745. ANALYSIS OF POLYMERIC PROCESSES (g)**

Credit 3 hrs. Fall. 3 Lect. Prerequisite, 5256 or 5742. Technical and economic evaluations of the principal processes used in manufacture of resins, plastics, and elastomers, including analyses of raw materials, reactor systems, product preparation, and problems in distribution and marketing.

**5746. CASE STUDIES IN THE COMMERCIAL DEVELOPMENT OF CHEMICAL PRODUCTS (g)**

Credit 3 hrs. Spring. 3 Lect. Prerequisite, or parallel, 5622. For graduate students. Detailed analysis of specific cases involving the development of new chemical products. Particular emphasis is given to planning activities, research justification, and market forecasting. Profitability calculations and projections are required.

**5748. FERMENTATION ENGINEERING (g)**

Credit 3 hrs. Spring. 2 Lect., 1 Rec. Prerequisites, or parallel courses, Chemistry 286, and any course in microbiology. An advanced discussion of fermentation as a unit process. Topics include sterilization, aeration, agitation, and continuous fermentation.

**5749. INDUSTRIAL MICROORGANISMS (g)**

Credit 1 hr. Fall. 1 Lect. Prerequisites, organic chemistry and physical chemistry. A brief introductory course in microbiology for students with a good background in chemistry.

**5752. POLYMERIC MATERIALS LABORATORY (g)**

Credit 2 hrs. Fall. 1 Lab. Prerequisite, 5256 or 5742. Experiments in the formation, characterization, fabrication, and testing of polymers.

**5760. NUCLEAR AND REACTOR ENGINEERING (g)**

Credit 2 hrs. Spring. 2 Lect. Prerequisite, 8302 or consent of the instructor. Fuel processing and isotope separation, radioactive waste disposal, fuel cycles, radiation damage, biological effects and hazards, shielding, power reactors.

**5851. CHEMICAL MICROSCOPY (u)**

Credit 3 hrs. Either term. 1 Lect., 2 Lab. Prerequisites, or parallel courses, Chemistry 285, 286, or 387, 388 and Physics 223, 224 or special permission. Microscopical examination of chemical and technical materials, processes and products. Measurement, particle size determination, analyses of mixtures, crystallization, phase changes and colloidal phenomena.

**5859. ADVANCED CHEMICAL MICROSCOPY (g)**

Offered on demand either term. Credit variable. Prerequisite, 5851 and special permission. Laboratory practice in special methods and special applications of chemical microscopy.

**5900. SEMINAR (g)**

Credit 1 hr. Fall-spring. General chemical engineering seminar required of all graduate students majoring in the field of chemical engineering.

**5903. SEMINAR IN BIOCHEMICAL ENGINEERING (g)**

Credit one hour. Spring. Advanced topics in the engineering applications of biophysics and biochemistry. Discussion of current research in the field.

**5909. RESEARCH SEMINAR (g)**

Fall. 1 Lect. Required of all students enrolled in the predoctoral honors program. An introduction to the research methods and techniques of chemical engineering.

**5952, 5953, 5954. RESEARCH PROJECT (g)**

Credit 3 hrs.; additional credit by special permission. Fall-spring. Prerequisite, 5304. Research on an original problem in chemical engineering.

**5955, 5956. SPECIAL PROJECTS IN CHEMICAL ENGINEERING (g)**

Credit variable. Either term. Research or studies on special problems in chemical engineering.

## CIVIL ENGINEERING

### General

**2001. THESIS (g)**

The thesis gives the student an opportunity to work out a special problem or to make an engineering investigation, to record the results of his work, and to obtain academic credit for such work. Registration for thesis must be approved by the professor in charge at the beginning of the semester during which the work is to be done.

Individual courses may be arranged to suit the requirements of graduate students. They are intended to be pursued under the immediate direction of the professor in charge, the student usually being free from the restriction of the classroom and working either independently or in conjunction with others taking the same course.

**2002. CIVIL ENGINEERING PRACTICE (u,g)**

Credit 3 hrs. On demand. Prerequisite, fourth year or graduate standing. Analysis of large engineering works; planning and organizing engineering and construction projects; professional practice; feasibility evaluations; financial justification of projects; social and political implications. The case method will be used extensively.

## Environmental Systems Engineering

**201. MICROECONOMIC ANALYSIS (u,g)**

Credit 3 hrs. Fall. Lect. M, W at 10:10 plus rec. sect. Prerequisite, one year of college level mathematics. Topics include the theory of the firm, of production, of market structures, of consumer behavior, and of welfare economics.

**202. MACROECONOMIC ANALYSIS (u,g)**

Credit 3 hrs. Spring. Lects. M, W, (F) at 10:10 plus rec. sect. Prerequisite, 201. Topics include the theory of international trade, national income determination, economic growth and stability, and monetary and fiscal policy.

**2601. TRANSPORTATION ENGINEERING (u)**

Credit 3 hrs. Fall. 2 Lect., 1 Lab. Transportation systems, traffic and operation, environmental investigations, transportation planning, highway engineering, other transportation modes, discussions of current issues.

**2602. LAW FOR ENGINEERS (u,g)**

Credit 3 hrs. Fall. 3 Lect. Basic features of laws and practices relating to contracts, torts, agency, property, water rights, business organizations, sales, insurance, labor, governmental regulation of business, negotiable instruments, workmen's compensation, patents, ethical responsibilities of the engineer; term paper, comparative analysis of the legal principles which affected the court decisions in some actual cases.

**2603. ENGINEERING ECONOMY (u)**

Credit 3 hrs. Spring. Principles and techniques for making decisions about the economic aspects of engineering projects: the economic environment; choosing between alternatives; criteria for making decisions; time value of money; economic selection and operation; effect of income taxes; retirement and replacement; economy studies for government activities; introduction to estimating costs of construction. Linear programming and critical path methods for economic analysis.

**[2604. CONSTRUCTION ENGINEERING (u,g)]**

Credit 3 hrs. Fall. 3 Rec. Introduction to methods, equipment, and engineering principles and procedures involved in construction activities; major emphasis is on heavy construction such as large earth-moving projects, tunnels and caisson foundations. Not offered 1967-68.

**2611. ECONOMICS OF ENVIRONMENTAL QUALITY MANAGEMENT (u,g)**

Credit 4 hrs. Fall. Prerequisite, 201 or equivalent. A graduate seminar devoted to theoretical welfare economics and its application to the management of environmental quality. In 1967, particular emphasis will be placed on the economic aspects of water resources development.

**2612. APPLIED WELFARE ECONOMICS (u,g)**

Credit 1-4 hrs. On demand. With permission of instructor. This seminar is an extension of 2611 with substantially greater emphasis on the application of welfare economics, statistics, and systems analysis to public investment decisions.

**2617. ENVIRONMENTAL SYSTEMS ANALYSIS I (u,g)**

Credit 3 hrs. 3 Lect. Fall. With permission of instructor. Intended for graduate students but open to qualified undergraduates. Structuring and solution of mathematical programming models with emphasis on linear programming and its extensions. Introduction to Lagrangian multipliers, dynamic programming, queuing theory, and game theory. Application of systems analysis techniques to the solution of complex environmental engineering-economic problems.

**2618. ENVIRONMENTAL SYSTEMS ANALYSIS II (u,g)**

Credit 3 hrs. 3 Lect. Fall or spring. Prerequisite, IE 9320, 9522 or 9530 or permission of instructor. Advanced topics in the application of mathematical programming and probability theory to the solution of environmental engineering problems. Special emphasis on water resource systems planning and management. Students will be expected to identify and solve practical problems using systems analysis techniques.

**[2621. THEORY OF TRAFFIC FLOW (u,g)]**

Not offered 1967-68.

**2622. TRANSPORTATION SYSTEMS ANALYSIS (u,g)**

Credit 3 hrs. On demand. Prerequisite, 2617 or IE 9522 or equivalent. Techniques of systems analysis are applied to physical planning, operating, and financing of transportation facilities. Wherever applicable, mathematical models of transportation processes are used to examine questions related to the development of optimal public policy decisions in the area of transportation. Attention is given to analysis of single and multimodal forms of transportation. Methods of mathematical programming, simulation and stochastic processes are employed in studies of these systems.

**2626. TRAFFIC ENGINEERING (u,g)**

Credit 3 hrs. Spring. 2 Rec., 1 Lab. Prerequisite, permission of instructor. City and highway traffic surveys and designs. Accidents, congestion, delay, speed, volume, density, parking, channelization, lighting, traffic control, and routing. Signs, signals, and markings. Urban traffic consideration in city planning. Driver reactions and habit pattern. Traffic engineering organization. Knowledge of digital computer programming procedures desirable.

**2628. HIGHWAYS AND AIRPORTS (u,g)**

Credit 3 hrs. On demand. Prerequisite, 2601 or permission of instructor. Route selection; design controls and criteria, including vehicle characteristics and highway capacity; sight distance, and horizontal and vertical control; right-of-way problems and access control; geometrics; at-grade intersection design; rotary and channelized intersection; grade separations and interchanges; regional systems of highways. Airport site selection; master plan; terminal facilities; heliports.

**2631. CONSTRUCTION MANAGEMENT (u,g)**

Credit 3 hrs. Spring. Planning and operation of construction projects by the civil engineer: coordinated organizations and control of men, materials, and machines; scheduling, estimating; purchasing; selection and training of employees, operation and maintenance of equipment; cost control; accident prevention; and other topics. Special reports required.

**2691. ENVIRONMENTAL SYSTEMS DESIGN PROJECT (u,g)**

Credit variable. On demand. With permission of instructor. May extend over two semesters. Design or feasibility study of environmental systems, supervised and assisted by one or more faculty advisors. Individual or group participation. Final report required.

**2692. ENVIRONMENTAL SYSTEMS ENGINEERING RESEARCH (u,g)**

Credit variable. On demand. Prerequisite preparation must be suitable to the investigation to be undertaken. With permission of the instructor. For investigation in depth of particular environmental systems problems.

**2693. ENVIRONMENTAL SYSTEMS ENGINEERING COLLOQUIUM (u,g)**

Credit 1-2 hrs. Fall or spring. Required of all graduate students with a major or minor in environmental systems engineering. Open to advanced undergraduates by permission of instructor. Preparation, presentation, and informal discussion of topics concerned with environmental systems.

**2694. SPECIAL TOPICS IN ENVIRONMENTAL SYSTEMS ENGINEERING (u,g)**

Credit variable. On demand. Supervised study by individuals or small groups in one or more specialized topics not covered in regular courses.

In addition to the above listed courses, many courses in city and regional planning (College of Architecture), business and public administration, economics (College of Arts and Sciences), and especially industrial engineering/operations research (see page 135) may be used to support studies in the general subject area of environmental systems engineering.

## Geotechnical Engineering

### SOIL MECHANICS AND FOUNDATION ENGINEERING, SUBGRADES AND PAVEMENTS

**2401. ELEMENTS OF SOIL MECHANICS (u)**

Credit 3 hrs. Fall. 2 Lect., 1 Lab. Soil properties; chemical nature; particle size distribution; Atterberg limits; permeability; principle of effective stress; compressibility; shear strength; the consolidation process. Introduction to bearing capacity; earth pressure; slope stability; settlement; seepage and the solution of practical problems. Laboratory tests for the measurement of soil properties.

**2406. FOUNDATION ENGINEERING (u,g)**

Credit 3 hrs. Spring. 3 Lect. Prerequisite, 2401. Principles of bearing capacity and deformation theory; stress distribution; shallow and deep foundations; prediction of settlement; design of footing, raft, caisson, and pile foundations.

Problems of construction, support of excavations; ground water lowering. Foundation investigations.

**2410. ENGINEERING PROPERTIES OF SOILS (u.g)**

Credit 3 hrs. Fall. 3 Lect. Prerequisite, 2401. Natural environments in which soils are formed; the chemical and physical nature of soils; soil classification; principle of effective stress; shear strength and compressibility of saturated and partly saturated soils; sensitivity; effects of anisotropic consolidation; permeability; laboratory and field tests.

**2412. GRADUATE SOIL MECHANICS LABORATORY (g)**

Credit 3 hrs. Spring. Prerequisite, 2410. Laboratory measurement of soil properties: classification tests; direct shear tests; triaxial tests for the measurement of pore water pressure; strength parameters. Pore pressure dissipation tests. Relationship of laboratory tests to field behavior.

**2414. EARTH PRESSURE AND SEEPAGE (u.g)**

Credit 3 hrs. Fall. 3 Lect. Prerequisite, 2401. Mechanics of the development of earth pressure in relation to soil properties and the imposed deformation conditions. Effects of seepage on the development of earth pressure. Design and stability of bulkheads and cofferdams. Pressures on shafts, tunnels and conduits.

Steady and transient flow of fluids through compressible and incompressible porous media. Consolidation processes. Sand drains. Field determination of permeability. Flow nets and the modification of flow patterns by drains and relief wells.

**2416. SLOPE STABILITY, EARTH AND ROCK FILL DAMS (u.g)**

Credit 3 hrs. Spring. 3 Lect. Prerequisite, 2410. Principles of stability for earth and rock slopes; effects of pore water pressure; short and long term stability; problems of draw-down; analysis of landslides and dam stability; principles of earth and rock-fill dam design; internal pore water pressures and drainage; filters; relief wells; foundation problems; grouting; cut-offs; control and instrumentation.

**2418. CASE STUDIES IN SOIL MECHANICS AND FOUNDATION ENGINEERING (g)**

Credit 3 hrs. Spring. Study of real engineering problems of various types; importance of the geological environment in recognizing the nature of field problems; application of mechanics and soil properties to obtain engineering solutions. Preparation of engineering reports.

**AERIAL PHOTOGRAPHIC AND PHYSICAL ENVIRONMENT STUDIES**

**2421. PHYSICAL ENVIRONMENT EVALUATION (u.g)**

Credit 3 hrs. Fall. 2 Lect., 1 Lab. Intended for graduate students or upper-classmen in engineering and planning. Permission of the instructor. A study of physical environment factors affecting engineering and planning decisions and the evaluation methods of these factors. Physical factors include the climate, soil and rock conditions, and water sources in different parts of the world. Evaluation methods include air and ground reconnaissance, interpretation of meteorological, topographic, geological, and soil maps, aerial photography, engineering data, and subsurface exploration records.

**2422. ADVANCED PHYSICAL ENVIRONMENT EVALUATION (u.g)**

Credit 3 hrs. Spring. 2 Lect., 1 Lab. Intended for graduate students or upper-classmen in engineering or planning. Prerequisite, 2421 or 2423 or permission of instructor. A study of physical environment by use of airphotos and other remote-sensing methods. Conventional photography, sequential photography, multiple spectral photography, space photography, infrared thermal and radar imageries are included in the study. Evaluation of environment is directed to the planning of engineering and development projects in general, and some emphasis on those related to special climatic regions such as tropical humid as well as arid regions.

**2423. ANALYSES AND INTERPRETATION OF AERIAL PHOTOGRAPHS (u.g)**

Preregistration required. Credit 3 hrs. Fall-spring. 2 Lect., 1 Lab. (The student is expected to pay the cost of field trips and aerial photographs for use in a term project, amounting to approximately \$15.) A study of the soil and rock areas of the United States and the patterns present in aerial photographs. Fundamental elements of soil patterns are analyzed to permit determination of soil texture, type of bedrock, and drainage properties. Field training in selected test areas.

**2424. ADVANCED INTERPRETATION OF AERIAL PHOTOGRAPHS (u.g)**

Preregistration required. Credit 3 hrs. Fall-spring. Course includes lectures and team projects in laboratory and field. Facilities include material for city-regional planning, soil mapping, conservation, ground and surface water, and civil engineering projects.

**2431. SUBGRADES AND PAVEMENTS FOR HIGHWAY AND AIRPORTS (u.g)**

Credit 3 hrs. Spring. 2 Lect., 1 Lab. Prerequisite, 2601 or permission of the instructor. Part I: Subgrade evaluation; compaction; drainage and frost action; stabilization. Part II: Aggregates; bituminous materials; evaluation of flexible pavement components; design and construction of flexible pavement structure. Part III: Design and construction of rigid pavements.

**2432. LOW-COST ROADS (u.g)**

Credit 3 hrs. Primarily for foreign students. Offered upon sufficient demand, usually in fall term. Prerequisite, consent of instructor. Principally directed study with one 2½ hour class session per week to be arranged. Rural road systems as instruments of economic development. Study of economic considerations in road system improvement; road improvement planning and programming; road location and geometric design; engineering soil characteristics; design of roadbed thickness; drainage; stabilization methods and materials; dust palliatives; wearing surfaces.

**2445. FIELD PRACTICE IN GEOTECHNICAL ENGINEERING (u.g)**

Credit 3 hrs. This course extends throughout the academic year with field studies conducted as two-day trips allocated to appropriate weekends in each term. The student is expected to pay transportation and related costs, amounting to approximately \$85. Prerequisite, 2401 or permission of instructor. This course is designed to provide experience with field conditions in important project environments within reach of the campus, including construction scenes in New York and central Pennsylvania. Preparation for and reports on various sites is a requirement.

The program includes field testing and sampling; resistivity and seismic probing of soils and bedrock; soil moisture and density measurements using nuclear equipment. Engineering construction practices and site evaluation related to landslides, bedrock, drainage, and unstable soils. The influence of rock types, ground water, and soil materials on existing structures; appropriate design procedures applied to sophisticated structures at difficult sites.

## GEODETIC AND PHOTOGRAMMETRIC ENGINEERING

### 2451. ENGINEERING MEASUREMENTS (u)

Credit 3 hrs. Spring. 2 Lect., 1 Lab. Study of basic surveying instruments and of procedures for measuring and laying out angles, distances, areas, and volumes; data processing and presentation of results of measurement operations; geometric geodesy; photogrammetry; field astronomy; graphical and numerical representation of topography; and planning and specifications for surveying operations.

### 2452. ELEMENTS OF SURVEYING (u)

Credit 2 hrs. Fall-spring. 1 Lect., 1 Lab. Fundamentals of engineering measurements. Study of observations and errors. Principles of recording data. Use of steel tape, level, and transit. Optical tooling. Photogrammetry. Problems of particular interest to students in fields other than civil engineering.

### 2461. ELEMENTARY GEODESY (u,g)

Credit 3 hrs. Fall. 3 Lect. Principal problems of geodesy. Coordinate systems, reference datum. Geometric problems on earth ellipsoid. Geometric astronomy. Application of Bjerhammar singular matrix calculus; singular matrices to geodesy.

### 2462. GEOPHYSICAL GEODESY (u,g)

Credit 3 hrs. Spring. 3 Lect. Basic potential theory, Laplace and Poisson equations; gravity and potential field in, on, and outside the spheroid; figure of the earth, application of Stokes formula for determining undulations of the geoid and deflection of the vertical; applications of spherical harmonics.

### 2463. GEODETIC CONTROL SURVEYS (u,g)

Credit 3 hrs. 2 Lect., 1 Lab. Prerequisite, 2451 or 2461. Principles of establishing a geodetic sea-level datum; isostasy, the geoid and ellipsoid; altimetry, trigonometric, spirit, and electronic leveling; orthometric and dynamic heights; electronic distance measurement; triangulation and trilateration; design of control networks and systems; astronomic and gravimetric observations, and satellite triangulation.

### 2464. GEODETIC ASTRONOMY (u,g)

Credit 2 hrs. 2 Lect. Prerequisite, 2451 or equivalent work in field astronomy. Study of the precise determination of latitude, longitude, and azimuth from astronomical observations. Night observation periods.

### 2465. ADVANCED ENGINEERING MEASUREMENTS (u,g)

Credit 3 hrs. Fall. Prerequisites, laboratory work involving physical measurements, Math 293 or equivalent. Measurement systems; analysis of errors and of error propagation; application of the principles of probability to the results of measurements for the purpose of determining the best estimates of measured and deduced quantities; and the best estimate of uncertainty

in these quantities; adjustment of conditioned measurements by the method of least squares and other methods; and curve fitting.

#### 2466. MAP PROJECTIONS AND CARTOGRAPHY (u,g)

Credit 3 hrs. 3 Lect. On demand. Theory of map projections including conformal, equal-area, azimuthal equidistant, et al. projections; coordinate transformations; plane coordinate systems for surveying. Design of map projections. Cartographic principles, systems, and related economic factors.

#### 2471. ELEMENTS OF PHOTOGRAMMETRY (u,g)

Credit 3 hrs. Fall. Lect., Lab. Principles and practice of terrestrial and aerial photogrammetric mapping, including planning flights, control surveys, uncontrolled mosaics, radialline control, simple stereoplotting instruments, parallax distortions, graphical tilt determination, trimetrogen charting, and economics. A Balplex projection stereoplotter with three projectors is available for use.

#### 2472. ADVANCED PHOTOGRAMMETRY (u,g)

Credit 3 hrs. Spring. 2 Lect., 1 Lab. Prerequisite, 2471. An advanced study of photogrammetric principles including: controlled mosaics; rectification; graphical and instrumental aerotriangulation. Principles of photogrammetric plotters and systems and the economic relation of these to density of ground control, office methods, and personnel. Balplex projection plotter is used extensively.

#### 2473. ANALYTIC AEROTRIANGULATION (u,g)

Credit 3 hrs. 3 Lect. Prerequisite, 2471. Analysis, theories, and computation of stereostrip triangulation by direction cosines, vector, and matrix methods. Coplanarity and colinearity equations for relative orientation and absolute orientation. Stereogram assemblage and coordinate transformation of strip and block coordinates. Cantilever extension and general bridging solutions. Propagation of errors.

#### 2481. CADASTRAL SURVEYING (u,g)

On demand. Credit 3 hrs. 3 Lect. Study of legal principles and surveying operations associated with acquisition of evidence for the delineation of boundaries of real estate. Topics covered include: metes and bounds, subdivision, and other methods of description of real property; land courts; riparian rights; mineral rights; resurveys; and authority and responsibilities of the Cadastral surveyor.

#### 2482. ENGINEERING SURVEYS (u,g)

Credit 3 hrs. Spring. 1 Lect., 2 Labs. Prerequisite, 2451 or equivalent. Circular curves, transition curves, earthwork measurement and calculation, topographic surveys, construction surveys, and project planning from maps.

### GENERAL

#### 2491. DESIGN PROJECT IN GEOTECHNICAL ENGINEERING (u,g)

Credit 1-6 hrs. On demand. Design problems frequently associated with the Master of Engineering Program.

#### 2492. RESEARCH IN GEOTECHNICAL ENGINEERING (g)

Credit 1-6 hrs. On demand. For students who wish to study one particular area of geotechnical engineering in depth. The work may take the form of

a laboratory investigation, field study, theoretical analyses or the development of design procedures.

#### 2493. SEMINAR IN GEOTECHNICAL ENGINEERING (u,g)

Credit 1-2 hrs. On demand. Presentation and discussion of technical papers and current research in the general field of geotechnical engineering or one of its specialized fields.

#### 2494. SPECIAL TOPICS IN GEOTECHNICAL ENGINEERING (u,g)

Credit 1-6 hours. On demand. Supervised study in small groups in one or more special topics not covered in the regular courses. Special topics may be of a theoretical or applied nature.

## Structural Engineering

#### 2701. STRUCTURAL ENGINEERING I (u)

Credit 3 hrs. Fall. 2 Lect., 1 2-hour period. Prerequisites, Mech. 212 and coregistration in Materials Science I. Evening prelims. First course in a four-course sequence of structural theory, behavior, and design. Basic structural concepts. External forces on simple structures under fixed and moving loads. Properties of structural metals. Behavior under load of metal members (beams, compression members, and beam-columns), including elastic and inelastic buckling.

#### 2702. STRUCTURAL ENGINEERING II (u)

Credit 3 hrs. Spring. 2 Lect., 1 2-hour period. Prerequisites, 2701, Material Science I, and coregistration in Engineering Materials. Analysis of simple trusses under fixed and moving loads. Approximate analysis of building frames. Properties and behavior of reinforced concrete. Behavior under load of reinforced concrete beams, columns, and beam columns, including effects of prestressing. Computer applications to analysis and design.

#### 2703. STRUCTURAL ENGINEERING III (u)

Credit 3 hrs. Fall. 2 Lect., 1 2-hour period. Prerequisite, 2702, Engineering Materials. Elastic displacements. Analysis of statically indeterminate structures by classical and modern methods. Collapse theory and plastic design concepts. Applications to steel and concrete structures.

#### 2704. STRUCTURAL DESIGN (u)

Credit 3 or 4 hrs. Spring. 2 Lect., 1 or 2 2-hour periods. Prerequisite, 2703. Comprehensive design project drawing on material from previous courses (2701-03). Additional design topics such as structural models, shell structures, connections, composite construction.

#### 2710. STRENGTH OF STRUCTURES (u,g)

Credit 3 hrs. Fall. 3 Rec. Prerequisite, 2704; can be taken concurrently. Analysis of two- and three-dimensional stress and strain. Theories of failure of ductile and brittle materials. Microstructure of materials. Structural materials under load, strain hardening. Bauschinger effect, residual stresses, hysteresis, stress concentration, brittle fracture, creep, alternating stress. Design for fatigue. Stresses beyond the elastic limit. Inelastic behavior of steel and reinforced concrete structures. Critical discussion of recent research and current design specifications.

**2711. BUCKLING: ELASTIC AND INELASTIC (u,g)**

Credit 3 hrs. Spring. Prerequisite, 2710. Analysis of elastic and plastic stability. Determination of buckling loads and postbuckling behavior of columns. Solid and open web columns with variable cross-section. Beam columns. Frame buckling. Torsional-flexural buckling. Lateral strength of unbraced beams. Buckling loads and postbuckling strength of plates, shear webs, and cylindrical shells. Critical discussion of current design specification.

**2712. ADVANCED STRUCTURAL ANALYSIS I (u,g)**

Credit 3 hrs. Fall. 3 Lect. Prerequisites, 2703 or equivalent; concurrent registration in CS 311. First half: stability, determinacy, redundancy of structures, approximate methods of analysis, brief review of classical methods for deflection calculation and indeterminate analysis, and extension to complex systems. Second half: introduction to matrix methods of analysis, force and displacement methods.

**2713. ADVANCED STRUCTURAL ANALYSIS II (u,g)**

Credit 3 hrs. Spring. 3 Lect. Prerequisite, 2712. First half: force, displacement, and mixed mode methods of matrix analysis, self-strained structures, generalized forces and displacements, large-order systems, finite element analysis, including plane stress and plane strain, frameworks, and plate bending, principles of optimization. Second half: arches, including secondary stress analysis, suspension systems, plastic analysis, torsion, curved beams, grids.

**2714. STRUCTURAL MODEL ANALYSIS AND EXPERIMENTAL METHODS (g)**

Credit 3 hrs. Spring. 2 Lect., 1 2-hr. period. Prerequisite, indeterminate analysis. Dimensional analysis and principles of similitude. Indirect model analysis of beams, frames, and trusses. Direct model analysis including loading and instrumentation techniques. Strain measurement and interpretation. Confidence levels for model results. Laboratory projects in elastic behavior and ultimate strength of model structures.

**2715. NUMERICAL METHODS IN STRUCTURAL ENGINEERING (g)**

Credit 3 hrs. Fall. Prerequisites, differential equations and consent of instructor; concurrent registration in FORTRAN instruction. Newmark's method and other numerical integration techniques. Solution of linear systems. Finite difference techniques for stress, stability, and other boundary value problems. Eigenvalue determination. Applications of digital computers in structural engineering analysis and design, including introduction to optimization techniques. Independent projects involving extensive use of digital computer.

**2716. CONCRETE STRUCTURES I (u,g)**

Credit 3 hrs. Fall. 3 Lect. Prerequisite, 2703 or equivalent. Analysis, design, and behavior of prestressed concrete structures; beams, slabs, composite construction, continuous beams and frames, tension and compression members; deflection analysis, end zone stresses, detailing, losses, efficiency. Design of concrete shells: shells of revolution, hyperbolic paraboloids.

**2717. CONCRETE STRUCTURES II (u,g)**

Credit 3 hrs. Spring. 3 Lect. Prerequisite, 2703 or equivalent. Analysis, design and behavior of reinforced concrete structures; safety considerations, deflection analysis, crack control; beams, columns, slabs, continuous frames, flat plates, flat slabs, composite construction; limit analysis and yield line theory. Design of concrete shells: folded plates and cylindrical shells.

**2718, 2719. BEHAVIOR AND DESIGN OF METAL STRUCTURES (u,g)**

Credit 3 hrs. a term. Fall-spring. Prerequisite, 2703 or equivalent. Contemporary methods for analyzing and designing metal structures. Behavior of structural elements and frames. Selected design applications from the fields of steel plate structures, bridges, suspension systems, light weight structures.

**2720. SHELL THEORY AND DESIGN (u,g)**

Credit 3 hrs. Fall. Prerequisites, Mathematics 294 or equivalent and consent of instructor. Differential geometry of surfaces. Bending and membrane theory of shells. Analysis and design of cylindrical shells, domes, paraboloids. Application of reinforced concrete roofs and pressure vessels. Stability of certain types of shells.

**2721. SPECIAL TOPICS IN MATRIX ANALYSIS (g)**

Credit 2 hrs. Spring. 2 Lect. Prerequisite, a prior exposure to matrix methods of structural analysis; 2713 may be taken concurrently. Analysis of tall buildings. Methods of tridiagonalization, transfer matrices. Iterative and direct solutions. Finite element analysis. Nonlinear problems. Eigenvalue problems; buckling and dynamic analysis.

**2722. DYNAMICS OF STRUCTURES (u,g)**

Credit 3 hrs. Spring. Prerequisite, Mathematics 294 or equivalent and consent of instructor. Equations of motion and vibration of simple systems. Numerical, energy and matrix methods of analysis of multiple degree systems. Analysis and design of structures for ground disturbances, including inelastic effects.

**2730. AEROSPACE STRUCTURES ANALYSIS I (u,g)**

Credit 3 hrs. Fall. 2 Lect. per week plus assigned reading. For Ae.E. and C.E. graduate students. First half: definition of aerospace structures, design environments, specifications, constructional concepts, material properties, modes of failure, directed reading in structural analysis. Second half: second half of 2712.

**2731. AEROSPACE STRUCTURES ANALYSIS II (g)**

Credit 3 hrs. Spring. 3 Lect. per week. Prerequisite, 2730. First half: first half of 2713. Second half: idealization techniques; application of finite element methods to aerospace structures. Elasticity procedures. Elastic instability: prismatic members and plates.

**2751. ENGINEERING MATERIALS. (u)**

Credit 3 hrs. Fall and Spring. 2 Lect., 1 Lab. Prerequisite, 6311. Engineering properties of concrete; engineering properties of steel, wood, and other selected structural materials; physico-chemical properties of soils, concrete, and bituminous materials. Design characteristics and significance of test results of materials used in engineering works. Extensive laboratory testing and report writing.

**2752. ADVANCED PLAIN CONCRETE (g)**

Credit 2 hrs. Spring. 2 Lect. Prerequisite, 2001 or the equivalent. Topics in the field of concrete, such as history of cementing materials, air-entrainment, light weight aggregates, petrography, durability, chemical reactions, and properties of aggregates. Relationships between internal structure, physical properties, chemical properties, and the mechanical properties of interest to the design and construction engineer.

**2753. STRUCTURE AND PROPERTIES OF MATTER (g)**

Credit 3 hrs. Fall. 2 Lect. plus conference. Open to graduate students in engineering or the physical sciences or by consent of instructor. Internal structure of materials ranging from the amorphous to the crystalline state. Correlation of the internal structures of materials with their physical and mechanical properties, primarily on a qualitative basis. Applications to various engineering materials.

**2757. CIVIL ENGINEERING MATERIALS PROJECT (g)**

On demand. Credit 1-6 hrs. Individual projects involving civil engineering materials.

**2758. CIVIL ENGINEERING MATERIALS RESEARCH (g)**

On demand. Hours and credit variable. Individual assignments, investigations and/or experiments with civil engineering materials.

**2791. DESIGN PROJECT IN STRUCTURAL ENGINEERING (g)**

(Meets project requirement for M.Eng. degree.) Credit 1 hr. fall and 3 hrs. spring; both terms required. Comprehensive design projects by design teams. Formulation of alternate design proposals, including economics and planning, for a given situation, and complete design of the best alternate. Determination of construction costs and preparation of sketches and drawings. Presentation of designs by oral and written reports.

**2792. RESEARCH IN STRUCTURAL ENGINEERING (g)**

On demand. Hours and credit variable. Students wishing to pursue one particular branch of structural engineering further than can be done in any of the regular courses may elect work in this field. The prerequisite courses depend upon the nature of the work desired. The work may be in the nature of an investigation of existing types of construction, theoretical work with a view of simplifying present methods of design or proposing new methods, or experimental investigation of suitable problems.

**2793. STRUCTURAL ENGINEERING SEMINAR (u,g)**

Credit 1-3 hrs. Spring. Open to qualified seniors and graduate students. Preparation and presentation of topics of current interest in the field of structures for informal discussion.

**2794. SPECIAL TOPICS IN STRUCTURAL ENGINEERING (g)**

On demand. Hours and credit variable. Individually supervised study in one or more of the specialized topics of civil engineering such as tanks and bins, suspension bridges, towers or movable bridges, which are not covered in the regular courses. Independent design or research projects may also be selected.

## Water Resources Engineering

### HYDRAULICS AND HYDROLOGY

**2301. FLUID MECHANICS (u)**

Credit 3 hrs. Spring. 3 Lect.-Rec. Fluid properties, hydrostatics, the basic equations of fluid flow, potential flow, dimensional analysis, flow in conduits, open channel flow.

**2302. HYDRAULIC ENGINEERING (u)**

Credit 3 hrs. Fall. 2 Rec., 1 Lab. Prerequisite, 2301. Free surface flow, fluid meters and measuring devices, hydraulic machinery, unsteady flow, network analysis. The laboratory will include a number of experiments in fluid mechanics and hydraulic engineering.

**2303. HYDROLOGY (u,g)**

Credit 2 hrs. Fall. 2 Lect.-Rec. Prerequisite, 2301. Introduction to hydrology including topics on precipitation, evapotranspiration, ground water, surface water, sedimentation.

**2312. EXPERIMENTAL AND NUMERICAL METHODS IN FLUID MECHANICS (u,g)**

Credit 2 hrs. Fall-spring. Prerequisite, 2302 or permission of instructor. Primarily a laboratory course for undergraduates and graduates; may be repeated for credit on permission of the instructor. Emphasis is on planning and conducting laboratory and field experiments and on numerical computation. Each section is limited to four students.

**2315. ADVANCED FLUID MECHANICS I (g)**

Credit 3 hrs. Fall. 3 Rec. Prerequisite, 2301. Introduction to vector and tensor notation. The equations of conservation of mass, momentum, and energy from a rigorous point of view. Similitude and modeling potential flow including circulation, vorticity, conformal mapping, and hodograph methods.

**2316. ADVANCED FLUID MECHANICS II (g)**

Credit 3 hrs. Spring. 3 Rec. Prerequisite, 2315. Exact solutions to the Navier-Stokes equations, the laminar and turbulent boundary layers, turbulence, introduction to non-Newtonian flow, and other topics.

**2317. FREE SURFACE FLOW (g)**

Credit 3 hrs. Spring. 3 Rec. Prerequisite, 2315 or permission of instructor. The formulation of the free surface equations and boundary conditions. Shallow water theory and the theory of characteristics. Unsteady and two-dimensional flow in open channels. Theory of small amplitude waves.

**2320. SURFACE-WATER HYDROLOGY (g)**

Credit 3 hrs. Fall. Prerequisite, 2301. Physical and statistical analysis relating to hydrologic processes. Hydrometeorology and evaporation. Surface runoff, base flow, and storage routing in linear and non-linear systems. Unit hydrograph theory.

**2321. FLOW IN POROUS MEDIA (g)**

Credit 3 hrs. Spring. Prerequisite, 2301 (also recommended, 2315). Fluid mechanics of flow through porous solids. The general equations of single phase and multiphase flow and the methods of solving the differential form of these equations. Hydraulics of wells, of infiltration and of ground water recharge, and of other steady state and transient seepage problems in fully and partially saturated materials.

**2331. RIVER AND COASTAL HYDRAULICS (u,g)**

Credit 3 hrs. Spring. Prerequisite, 2302 or permission of instructor. The first part of this course deals with the hydraulics of fixed bed channels including the specific energy concept, secondary currents, rapid flow problems, artificial

obstructions in channels, and the general problems of frictional resistance. In the second part of the course, attention is paid to coastal and oceanographical engineering problems including the theory of waves, breaking of waves, wave refraction and wave diffraction.

#### 2332. SEDIMENT TRANSPORT (u,g)

Credit 3 hrs. Fall. Prerequisite, 2302 or permission of instructor. Hydraulics of channels with a movable bed including particle mechanics, critical tractive force theory, the DuBoys Problem, the Swiss formulas, Einstein's Bedload theory, the suspension and saltation theory, calculation of total sediment loads. Interesting problems in fluvial hydraulics will be included.

#### 2333. FLUVIAL PROCESSES (u,g)

Credit 2 hrs. Spring. Prerequisite, consent of instructors. Seminar, hours to be arranged, field trips. Course offered jointly with Department of Geological Sciences. On demand. The common problems of fluvial processes, hydraulics, and sediment transport are studied along with the appropriate analytical methods and experimental techniques.

#### 2391. PROJECT (g)

Offered on demand. Hours and credit variable. The student may elect a design problem or undertake the design and construction of special equipment in the fields of fluid mechanics, hydraulic engineering or hydrology.

#### 2392. RESEARCH IN HYDRAULICS (g)

Offered on demand. Hours and credit variable. The student may select an area of investigation in fluid mechanics, hydraulic engineering, or hydrology. The work may be either of an experimental or theoretical nature. Results should be submitted to the instructor in charge in the form of a research report.

#### 2393. HYDRAULICS SEMINAR (u,g)

Credit 1 hr. Fall-spring. Open to undergraduates and graduates and required of graduate students majoring in hydraulics or hydraulic engineering. Topics of current interest in fluid mechanics, hydraulic engineering, and hydrology.

#### 2394. SPECIAL TOPICS IN HYDRAULICS (g)

Offered on demand. Hours and credit variable. Special topics in fluid mechanics, hydraulic engineering, or hydrology.

## SANITARY ENGINEERING AND WATER RESOURCES ENGINEERING

#### 2501. WATER SUPPLY AND WASTE-WATER ENGINEERING (u)

Credit 3 hrs. Fall. 2 Lect., 1 Lab or Comp. Prerequisite, 2301. Concurrent registration in 2302. Introduction to water resources engineering, including water supply and water quality control. Principles applicable to the disposal, assimilation, and fate of municipal and industrial wastes in the environment. Problems in the analysis and design of water transmission and distribution systems, and of waste-water and storm-water collection and waste management systems.

#### 2502. WATER AND WASTE-WATER TREATMENT PROCESSES (u,g)

Credit 3 hrs. Spring. 2 Lect., 1 Lab. Prerequisites, 2301, 2302. Study of the microbiological, chemical, and physical phenomena underlying the treatment

of water and of municipal and industrial waste-water. Application of these principles to the analysis and design of unit treatment processes. Laboratory studies of water quality and of unit treatment processes.

#### 2510. CHEMISTRY OF WATER AND WASTE-WATER (u,g)

Credit 3 hrs. Fall. 2 Lect.-Rec., 1 Lab. Prerequisite, one year of college chemistry. Principles of chemistry applicable to the understanding, design and control of water and waste-water treatment processes and to reactions in receiving waters. Analytical methods applicable to the measurement and control of air and water quality.

#### 2512. MICROBIOLOGY OF WATER AND WASTE-WATER (u,g)

Credit 3 hrs. Spring. 2 Lect., 1 Lab. Introduction to the characteristics of microorganisms, their interaction with the environment, and their effect on water quality. Their role in the oxidation of organic substances in waste-water treatment and in receiving waters. Bacteriological, biological and limnological parameters of water quality and their measurement.

#### 2513. TREATMENT PROCESSES (u,g)

Credit 3 hrs. Fall. 3 Lect. Prerequisite, 2502 or equivalent. Analysis and design of processes for the removal of impurities from water and from municipal and industrial waste-water. Theoretical and applied aspects of treatment process design, including reaction kinetics, transfer phenomena, and the mechanics of fine particles.

#### 2514. ASSIMILATION OF WASTES IN WATER (u,g)

Credit 3 hrs. Spring. 3 Lect. Prerequisite, appropriate undergraduate course. Capacity of water resources to assimilate gaseous, liquid, and particulate wastes. Phenomena pertinent to the dispersion and stabilization of wastes in water. Analog and digital computer methods. Emphasis on the advanced literature.

#### 2515. WATER RESOURCES PROBLEMS AND POLICIES (u,g)

Credit 3 hrs. Fall. Lect.-Discuss. Prerequisite, permission of the instructor. Intended primarily for graduate engineering and nonengineering students but open to qualified undergraduates. A comprehensive approach to water resources planning and development. Historical and contemporary perspectives of water resources problems, organization and policies.

#### [2516. PHYSICAL BASIS OF WATER RESOURCE PLANNING (g)]

Credit 2 hrs. Fall. Lect.-Discuss. Intended primarily for nonengineering graduate students taking water resources as a minor subject. An introduction to hydrologic systems with topics in climate; surface and ground water flow; flood abatement and water quality control. Offers technical background material useful in subsequent courses in the water resources area. Not offered 1967-68.

#### 2520. ENVIRONMENTAL HEALTH ENGINEERING (u,g)

Credit 3 hrs. Spring. 3 Lect., Reports. Prerequisite, 2501, or equivalent, or permission of the instructor. Concepts of environmental health, principles of epidemiology and of toxicology. Introduction to radiological health. Consideration of problems in environmental control with emphasis on waste management, water quality control, air quality control, and solid waste disposal.

**2532. ENVIRONMENTAL SANITATION (u,g)**

Credit 3 hrs. Fall. Lect.-Discuss., reports and field trips. Open to students who are not in civil engineering. Environmental health concepts and methods, and their application to environmental planning and control at the subdivision, municipal, and metropolitan levels. Introduction to: water resource planning and development; water quality control; water supply; municipal, industrial and private waste-water disposal; air quality control; solid waste disposal and radiological health.

**2535. THE LEGAL BASIS OF WATER RESOURCES PLANNING (u,g)**

Credit 3 hrs. Spring or fall. Prerequisite, permission of the instructor. Designed specifically for nonlaw students interested in the legal aspects of water resources planning, development, and management.

**2545. WATER RESOURCES PLANNING SEMINAR (u,g)**

Credit 3 hrs. Spring. Prerequisite, 2515 or permission of the instructor. The concepts, processes, and techniques of regional, multi-purpose river basin planning and development. The case study method, including the preparation of an integrated, comprehensive report for the study area, is followed.

**2547. SEMINAR IN WATER RESOURCES SYSTEMS ANALYSIS (g)**

Credit 4 hrs. Spring or fall. Prerequisite, permission of the instructor which will be based on the student's ability to contribute substantially to the seminar. An interdisciplinary approach to the solution of a complex problem in water resources engineering involving the application of systems analysis, statistics, economic theory, hydrology and hydraulic and sanitary engineering. Each student will study and discuss a particular aspect of the problem. The results of the individual studies should contribute to the solution of the overall problem. Taught by engineering and economics faculty.

**2591. DESIGN PROJECT IN WATER RESOURCES ENGINEERING OR IN SANITARY ENGINEERING (g)**

On demand. Credit variable. Prerequisites, 2501 or 2502 or equivalent. The student will elect or be assigned problems in the design of water and waste-water treatment processes or plants; waste-water disposal systems; water quality control systems; water resource development or management systems; or of laboratory apparatus of special interest.

**2592. SANITARY ENGINEERING RESEARCH (g)**

On demand. Credit variable. Prerequisites will depend upon the particular investigation to be undertaken. For the student who wishes to study a special topic or problem in greater depth than is possible in formal courses.

**2593. SANITARY ENGINEERING COLLOQUIUM (u,g)**

Credit 1-2 hrs. Fall-spring. Required of all graduate students taking a major or minor in sanitary engineering; open to undergraduates by permission of instructor. Preparation, presentation, and discussion of topics and problems of current interest in sanitary engineering and water resources engineering.

## COMPUTER SCIENCE

### 201. SURVEY OF COMPUTER SCIENCE (u)

Credit 3 hrs. Spring. Introduction to the structure and use of the modern digital computer. This course is intended to be a nonmathematical treatment of the material, and emphasis is on non-numeric computer applications such as information retrieval, language processing, and artificial intelligence. A limited introduction to programming in a problem-oriented language is included.

### 311. INTRODUCTION TO COMPUTER PROGRAMMING (u)

Credit 2 hrs. Either term. Notations for describing algorithms, analysis of computational problems. Application of the (FORTRAN IV, PL/I) programming language to solve simple numerical and non-numerical problems using a digital computer.

### 385. AUTOMATA (u)

Credit 3 hrs. Spring. Prerequisite, Mathematics 294 or 222 or equivalent. The capabilities, limitations, and structures of finite automata, Turing machines, and other abstract computing devices will be studied. Applications to questions of undecidability and artificial intelligence.

### 401. COMPUTER ORGANIZATION AND PROGRAMMING (g)

Credit 4 hrs. Either term. Prerequisite, Mathematics 221 or 293 or equivalent. Not open to students with credit for 9481 or 9381. Characteristics and structure of digital computers. Programming in assembly and higher-order languages. Representation of data, index registers and indirect addressing, program organization, macro operations, recursive procedures, interpretive routines, auxiliary storage and input-output, operating systems.

### 411. INFORMATION AND COMPUTER STRUCTURES (g)

Credit 4 hrs. Fall. Prerequisite, 401 or equivalent. Fundamentals of computer organization and the representation of structured operands in computers. Information flow during instruction execution; addressing structures, symbol table techniques. Algorithms for the manipulation of arrays, trees, strings, lists. Programming language structure; recognition and analysis systems. Time-sharing computer organization, paging, segmenting, and core management.

### 412. COMPUTER LANGUAGES AND COMPILERS (g)

Credit 4 hrs. Spring. Prerequisite, 411 or consent of instructor. Concerned with the theory and techniques of programming languages and systems for large scale digital computer systems. Topics include comparison of structure and form of assemblers, interpreters, compilers and list processors; formal definition of algorithmic languages and techniques used in compilation. Students will design and implement several simple languages during the term.

### 413. SYSTEMS PROGRAMMING (g)

Credit 4 hrs. Fall. Prerequisite, 412 or consent of instructor. Brief review of batch process programming systems, their components, operating characteristics, user services, and their limitations. Implementation techniques for parallel processing of I/O and interrupt handling. Overall structure of multi-programming systems on large-scale multiprocessor hardware configuration. Details on addressing techniques, core management, file system design and management, system accounting, and other user-related services. Command

languages and the embedding of subsystems. Operating characteristics (parameters) of large-scale systems.

[417. ADVANCED INFORMATION PROCESSING (g)]

Credit 4 hrs. Fall. Prerequisite, 401 or equivalent experience. Provides a theoretical foundation in information processing, with emphasis on the use of computers for the solution of primarily nonnumeric problems. Covered are recent developments in processor organization and processing methods, compiling and translating systems, search and sorting techniques. Students will run individual term projects on the available computing equipment. Not offered in 1967-68.

420. COMPUTER APPLICATIONS OF NUMERICAL ANALYSIS (g)

Credit 4 hrs. Fall. Prerequisites, Mathematics 222 or 294 and Computer Science 311 or equivalent programming experience. Modern computational algorithms for the numerical solution of a variety of applied mathematics problems are presented and students solve current representative problems by programming each of these algorithms to be run on the computer. Topics include numerical algorithms for the solution of linear systems; finding determinants, inverses, eigenvalues and eigenvectors of matrices; solution of a single polynomial or transcendental equation in one unknown; solution of systems of nonlinear equations; acceleration of convergence; Lagrangian interpolation and least squares approximation for functions given by a discrete data set; differentiation and integration; solution of ordinary differential equations: initial value problems for systems of nonlinear first order differential equations, two-point boundary value problems; partial differential equations: finite difference grid technique for the solution of the Poisson equation.

421-422. NUMERICAL ANALYSIS

Credit 4 hrs. a term. Throughout the year. Prerequisite, Mathematics 412 or 416 or 422. A mathematically rigorous treatment of numerical analysis. Covers the topics of Computer Science 420 in a more complete fashion with emphasis on careful analytical derivation of algorithms, proofs of convergence, and error analysis. Includes some computer programming projects.

435. INFORMATION ORGANIZATION AND RETRIEVAL (g)

Credit 4 hrs. Spring. Prerequisite, 401 or equivalent. Covers all aspects of automatic language processing on digital computers, with emphasis on applications to information retrieval. Analysis of information content by statistical, syntactic, and logical methods. Dictionary techniques. Automatic retrieval systems, question-answering systems. Evaluation of retrieval effectiveness.

[441. HEURISTIC PROGRAMMING (g)]

Credit 4 hrs. Spring. Prerequisites, 401 and 411. Comparison of heuristic and algorithmic methods. Justification of the need for heuristic approach and discussion of the objectives of work in artificial intelligence and in simulation of cognitive behavior. Discussion of research projects using heuristic programming techniques. Not offered in 1967-68.

485. THEORY OF AUTOMATA I (g)

Credit 4 hrs. Fall. Prerequisite, 401, Mathematics 481, or consent of instructor. Automata theory is the study of abstract computing devices; their classification, structure and computational power. Topics include finite state automata, regular expressions, decomposition of finite automata and their realization, Turing machines and their computational power.

**486. THEORY OF AUTOMATA II (g)**

Credit 4 hrs. Spring. Prerequisite, 485 or consent of the instructor. Topics include context-free and context-sensitive languages and their relation to push-down and linearly-bounded automata. Quantitative aspects of Turing machine computations: time and memory bounded computations with applications to language processing and classification of other automata and computations.

**[487. FORMAL LANGUAGES (g)]**

Credit 4 hrs. Spring. Prerequisite, 401. A study of formal languages, their processing and processors. Topics include regular, context-free, and context-sensitive languages; their recognition, parsing, algebraic properties, decision problems, recognition devices, and applications to computer and natural languages. Not offered in 1967-68.

**[488. THEORY OF EFFECTIVE COMPUTABILITY (g)]**

Credit 4 hrs. Spring. Prerequisite, 401, 485, Mathematics 481, or consent of instructor. Turing machines and Church's Thesis, universal Turing machines, unsolvability of the halting problem. Recursively enumerable sets, productive and creative sets, relative computability, the recursion theorem, Post's problem. Computational complexity hierarchies. Not offered in 1967-68.

**[521. NUMERICAL ANALYSIS OF LINEAR AND NONLINEAR SYSTEMS OF EQUATIONS (g)]**

Credit 4 hrs. Spring. Prerequisites, Mathematics 521 and Computer Science 422. Topics include recent methods for the solution of linear systems and eigenvalue, eigenvector determination; global convergence theorems for nonlinear systems, Newton-Kantorovich theory and its variations; function minimization. Not offered in 1967-68.

**523. NUMERICAL SOLUTION OF ORDINARY DIFFERENTIAL EQUATIONS AND INTEGRAL EQUATIONS (g)**

Credit 4 hrs. Fall. Prerequisites, Mathematics 427 and Computer Science 422. Topics include solution of  $n$ -th order nonlinear initial value problems and boundary value problems; single step methods; predictor-corrector techniques; stability, accuracy and precision of methods; eigenvalue problems; solution of integral equations having constant or variable limits: finite difference and iterative methods; singular and nonlinear integral equations.

**525. NUMERICAL SOLUTION OF PARTIAL DIFFERENTIAL EQUATIONS (g)**

Credit 4 hrs. Spring. Prerequisites, Mathematics 428 and 521, and Computer Science 523. General classification; solution by method of characteristics; finite-difference methods for hyperbolic and elliptic equations; parabolic equations in two dimensions; direct solution of elliptic finite-difference equations; iterative methods for the solution of elliptic equations; block methods for large systems; singularities in elliptic equations; stability in relation to initial value problems and nonlinear discretization algorithms.

**527. NUMERICAL METHODS IN APPROXIMATION THEORY (g)**

Credit 4 hrs. Spring. Prerequisites, Mathematics 521 and Computer Science 422.  $L_p$  norms; least-square approximation and orthogonal functions; Tchebycheff, asymptotic, rational, and continued fraction approximations; the quotient-difference algorithms; methods of descent and ascent.

**587. COMPUTATIONAL COMPLEXITY (g)**

Credit 4 hrs. Fall. Prerequisite, 486 or 488 or consent of instructor. General measures of computational complexity and methods of classifying computable (recursive) functions. Examples of topics include: restricted Turing machines, real-time computation, elementary functions, primitive recursive hierarchies.

**590. SPECIAL INVESTIGATIONS IN COMPUTER SCIENCE (g)**

Credit and sessions to be arranged. Throughout the year. Offered to qualified students individually or in small groups. Directed study of special problems in the field of computer science. (Register only with the registration officer of the department.)

**591. COMPUTER SCIENCE GRADUATE SEMINAR (g)**

Credit 1 hr. Throughout the year. For graduate students interested in computer science. Staff, visitors, and students. A weekly meeting for the discussion and study of important topics in the field.

**[621. SEMINAR IN NUMERICAL ANALYSIS (g)]**

Credit 4 hrs. One term. Prerequisite, consent of instructor. Not offered in 1967-68.

**[681. SEMINAR IN AUTOMATA THEORY (g)]**

Credit 4 hrs. One term. Prerequisite, consent of instructor. Not offered in 1967-68.

**ADVANCED DATA PROCESSING SYSTEMS**

(Industrial Engineering 9583) (g)

Credit 3 hrs. Fall. Prerequisite, 401 or BPA 901 or consent of instructor. Concerned with design of integrated data processing systems for operational and financial control: questions of system organization, languages, and equipment appropriate to this type of application. file structures, addressing and search problems, sorting techniques; problems of multiple-remote-input, on-line data processing systems; techniques of system requirement analysis.

**DIGITAL SYSTEMS SIMULATION (Industrial Engineering 9580) (g)**

Credit 3 hrs. Fall. Prerequisite, 401 and a course in probability. The use of a program for a digital computer to simulate the operating characteristics of a complex system in time. Discussion of problems encountered in construction of a simulation program; synchronization and file maintenance, random number generation, random deviate sampling. Programming in the CLP and SIMSCRIPT languages. Problems in the design of effective investigations using simulation; statistical considerations when sampling from a simulated process. Applications of simulation to queuing, storage, traffic, and feedback systems. Applications will include use in the design of facilities, design of operating disciplines, and use in real-time control of an operating system.

**INTRODUCTION TO ALGEBRAIC CODING (Electrical Engineering 4472) (u,g)**

Credit 3 hrs. Spring. Prerequisite, Mathematics 293 or equivalent. A course intended for students interested in information theory of digital systems. Codes for correcting errors in data transmission or processing: group codes, Hamming codes, Bose-Chaudhuri codes. Bounds on performance. Codes for data compression and storage: variable-length codes, prefix codes. Codes for

synchronization and their application to location of distance objects by radar. Analysis of these codes in terms of the underlying algebraic theory. Implementation by sequential machines. The algebraic theory (groups, fields, etc.) will be developed as needed.

## ELECTRICAL ENGINEERING

### Required Courses

#### SYSTEMS SEQUENCE

##### 4301-4302. ANALYSIS OF ELECTRICAL SYSTEMS I AND II (u)

Credit 4 hrs. 3 Lectures, 1 Rec.-Comp. Prerequisites, Electrical Science 242 and Mathematics 294 or equivalents. Analysis of linear RLC-networks; network graphs, linear independence, dimensionality. Voltage, current, and mixed bases of analysis in vector-matrix form. Network energy state, state transition, fundamental matrix, stability, excitability, observability. Forced responses; superposition integral, excitations derived from real and complex exponentials, network equilibrium state, network functions. Sinusoidal excitations; power and energy functions, properties of driving-point network functions. Analysis of linear RLC-networks with mutual inductance. Two-winding transformers. Linear models for active devices; frequency dependency, gain-bandwidth product. Analysis of linear active networks. Flow graphs; proper graphs. Intentional feedback; sensitivity. Root locus and Nyquist plots. Intentional oscillation; conditions for instability; piecewise linear models and networks. Phase plane analysis. Dynamical equations for mechanical and other systems. Passive and active analogs. Analysis of elementary electromechanical systems. Coupling fields, forces, and motion for linear and nonlinear materials. Lagrangian and Hamiltonian formulations of system equations.

##### 4401. DETERMINISTIC SIGNALS IN LINEAR SYSTEMS (u)

Credit 4 hrs. Fall. 3 Lect. 1 Rec.-Comp. Prerequisite, 4302. Fourier Integral as the limiting form of Fourier Series. Response of asymptotically stable linear systems to aperiodic excitations. The Gibbs phenomenon. Convolution. Application of Fourier theory to the analysis and design of linear and pulse modulation systems. The sampling theorem. Singularity functions and initial conditions. The magnitude-phase, and real-imaginary part relations for transforms of realizable systems. Nyquist criterion. Time-bandwidth relations. The Laplace Transform and its convergence properties. Analytic functions and contour integration. At the level of A. Papoulis, *The Fourier Integral and its Applications*.

##### SWITCHING SYSTEMS I (Electrical Engineering 4587) (u,g)

Credit 3 hrs. Fall. Prerequisite, 4322 or consent of instructor. Switching algebra; switching devices; logical formulation and realization of combinational switching circuits; minimization aids; number representation and codes; simple memory devices; synchronous sequential circuits; counters; shift registers, and arithmetic units in a digital computer.

##### SWITCHING SYSTEMS II (Electrical Engineering 4588) (u,g)

Credit 3 hrs. Spring. Prerequisite, 4587 or equivalent. Synchronous and asynchronous sequential circuits, formulation and optimization; large-scale

memory units, selection and control; further discussion of arithmetic units; integrated study of switching systems including general-purpose digital computer, control switching, and communication switching; introduction to the general theory of learning machines.

#### 4402. RANDOM SIGNALS IN LINEAR SYSTEMS (u)

Credit 4 hrs. Spring. 3 Lect., 1 Rec.-Comp. Prerequisite, 4401. Analysis of linear systems subjected to random excitation. Applications to communication and control systems. Introduction to probability, random variables, expectations, random vectors. Measurement of moments and probabilities. Least mean square estimation, matched filters, and channel capacity. Random processes, correlation functions, and power spectral densities. Input-output relations in linear systems. At the level of Davenport and Root, *Random Signals and Noise*.

### ELECTROPHYSICS SEQUENCE

#### 4311-4312. ELECTROMAGNETIC FIELDS AND WAVES (u)

Credit 4 hrs. Throughout the year. 3 Lect., 1 Rec.-Comp. Prerequisites, Electrical Science 242 or 244 and Mathematics 294 or equivalent. Foundations of electromagnetic theory for static and dynamic fields with applications to waves, circuits, and devices. Topics treated will include: one-dimensional waves and transmission lines; vector calculus; polarization of dielectric and magnetic materials; boundary-value problems, separation of variables, orthogonal functions; field energy and stresses; Maxwell's equations, wave solutions, retarded potentials, applications to circuits including skin effect; electromechanics of rigid conductors and continuous media, elements of magnetohydrodynamics; radiation, elementary antennas; wave propagation in periodic structures; reflection and refraction of waves, wave-guides, cavities, coupled modes; frequency dependence of conductivity and permittivity, plasmas; wave propagation in gyrotropic media and in electron steams. At the level of Ramo, Whinnery, and Van Duzer, *Fields and Waves in Communication Electronics*.

#### 4411. QUANTUM THEORY AND APPLICATIONS (u)

Credit 4 hrs. Fall. 3 Lect., 1 Rec.-Comp. Prerequisite, 4311, 4312 or equivalent. Introduction to nonrelativistic quantum theory with emphasis on applications; experimental basis for wave-particle duality; structure of the theory in terms of wave functions and operators; solution of Schroedinger's equation for one and three dimensional potentials; angular momentum; spin; time independent perturbation theory; interaction of atoms with static fields; central field model of atomic structure; antisymmetry and the Pauli exclusion principle. At the level of White, *Basic Quantum Mechanics*.

#### 4412. SOLID STATE PHYSICS AND APPLICATIONS (u)

Credit 4 hrs. Spring. 3 Lect., 1 Rec.-Comp. Prerequisite, 4411 or equivalent. Introduction to solid state physics and application to electronic devices; crystal symmetry and structure; X-ray diffraction, reciprocal lattice; free electron theory, photo emission, thermionic emission, field emission, Drude theory of electrical conductivity; band theory; semiconductors and semiconductor devices including p-n junctions, transistors, avalanche and hot electron devices; dielectric properties of solids; magnetism; superconductivity. At the level of C. Kittel, *Introduction to Solid State Physics* (3rd ed.).

## LABORATORY SEQUENCE

## 4321. ELECTRICAL LABORATORY I (u)

Credit 4 hrs. Fall. 1 Lect., 2 Lab. Basic electrical and electronic instrumentation and measurements involving circuits and fields of both active and passive elements; and an experimental introduction to solid state and high vacuum devices.

## 4322. ELECTRICAL LABORATORY II (u)

Credit 4 hrs. Spring. 1 Lect., 2 Lab. Basic experiments concerning transmission lines, high-frequency measurements and techniques, amplifiers and oscillators, nonlinear and negative-resistance devices, and energy-conversion methods.

## Elective and Graduate Courses

Of the following elective and graduate courses, certain ones may not be offered every year if the demand is considered to be insufficient. For the courses that follow, the digits in the four-digit course number have significance as follows (see page 54).

## THEORY OF SYSTEMS AND NETWORKS

## 4501. SYSTEMS WITH RANDOM SIGNALS AND NOISE (g)

Credit 4 hrs. Fall. 3 Lect. 1 Rec. Prerequisite, 4402 or equivalent. Linear systems and signals; probability and random variables; random processes in communication systems; spectral analysis of random processes; filtering of random signals; band-pass signals and noise; envelope detection of signals and noise; post detection filtering; nonlinear receiver operations; modulation systems; time and frequency multiplex systems; noise in analog modulation systems.

## 4502. STATISTICAL ASPECTS OF COMMUNICATION (g)

Credit 4 hrs. Spring. 3 Lect. 1 Rec. Prerequisite, 4501. Digital transmission systems; the discrete transmission channel; elements of information transmission and coding; information capacity; system optimization; linear least squares prediction and smoothing; matched filters; optimum receivers; hypothesis testing; parameter estimation; the matched filter and the correlation receiver; wave-form systems and signal design; error probabilities and error bounds for various systems. At the level of Wozencraft and Jacobs, *Principles of Communication Engineering*.

## 4503. THEORY OF LINEAR SYSTEMS I (g)

Credit 4 hrs. Fall. 3 Lect. Prerequisite, 4401 or consent of instructor. Introduction to linear system theory through an axiomatic approach and its applications to control and information processing. Characterization of linear lumped parameter systems: integral, differential and normal forms. The state concept: state vectors, nodes in linear systems, the notions of controllability and observability. Analysis of time-variant and time-varying linear systems and their properties. Signal spaces, duality concepts. Discrete-time linear systems. Stability of motion.

**4504. THEORY OF NONLINEAR SYSTEMS I (u)**

Credit 4 hrs. Spring. 3 Lect. Prerequisite, 4503 or 4501 or 4571, or consent of instructor. Lagrangian formulation. Analysis of first and second order nonlinear systems with applications. Phase-plane analysis of autonomous systems; singular points, limit cycles, and equilibrium states; theories of Bendixson, Lienard, and Poincare; relaxation behavior in the phase plane; perturbation theory, existence, convergence, and periodicity of perturbation series; methods of van der Pol and of Krylov and Bogoliubov. Forced nonlinear systems, harmonics, subharmonics, jump phenomena, and frequency entrainment; periodic systems, Floquet theory, Mathieu-Hill theory, applications to the stability of nonlinear systems and to parametrically-excited systems.

**4505-4506. OPTIMIZATION AND APPROXIMATION TECHNIQUES I AND II (g)**

Credit 4 hrs. Fall and spring. 3 Lect. Prerequisites, 4402 and current registration in 4503 or consent of instructor. Optimization and approximation techniques used in the synthesis of systems and signals, with applications in control and communication. Signal approximation problems; Kautz filters, measurement of expansion coefficients, complementary filters. Examples of signal approximation problems in biological and electrical systems. Optimum pole positions for exponential approximation. Computational methods for parameter optimization and approximation problems. Formulation of deterministic control optimization problems; minimal time, minimal fuel, regulator problems. Introduction to variational methods. Solution of two-point boundary-value problems by control vector iteration. Statistical optimization problems. Synthesis of optimal filters and feedback controllers.

**4507-4508. RANDOM PROCESSES IN ELECTRICAL SYSTEMS (g)**

Credit 4 hrs. 3 Lect. The concepts of randomness and uncertainty and their relevance to the design and analysis of electrical systems. An axiomatic characterization of random events. Numerically valued events: random variables and random vectors. Distribution functions and densities. Functions of random vectors. Expectation and measures of fluctuation. Moment and probability inequalities. Properties and applications of characteristic functions. Convergence of sequences of random variables: laws of large numbers and central limit theorems. More general collections of random variables: random processes. Random processes as signal or system models and their specification. Sample function behavior. Markov processes, particularly chains and the Poisson process. Stationarity and ergodicity. The Gaussian process. Wide sense stationary processes: correlation functions, spectra. Representations of random processes. Transformations of random processes by nonlinear devices and filters. Optimum filtering theories.

**4571-4572. NETWORK ANALYSIS AND SYNTHESIS I AND II (g)**

Credit 3 hrs. per term. Throughout the year. 3 Lect. Open to qualified seniors. Scattering, immittance, and hybrid network formalisms discussed and applied to network analysis and power transfer in multiport junctions. Elements of synthesis of reciprocal and nonreciprocal lumped networks including n-ports. General physical basis for network techniques in distributed systems deduced from linearity, time-invariance and power-energy constraints. Generalized bounded real and positive real functions and matrices, and the theory of physical realizability. Applications to propagation in nonreciprocal media, synthesis of transmission line networks, gain-bandwidth theory of active devices. At the level of Carlin and Giordano, *Network Theory: An Introduction to Reciprocal and Nonreciprocal Circuits*.

## 4601. THEORY OF NONLINEAR SYSTEMS II (g)

Credit 4 hrs. Spring. 3 Lect. Prerequisite, 4504 or consent of instructor. Non-autonomous and higher order nonlinear systems with applications; representation of systems with several degrees of freedom; approximations; use of Liapunov functions in system stability determination and design; describing functions and Aizerman's hypothesis, theory of Lur'e-Letov for nonlinear control; asymptotic expansions for the period behavior of systems under the influence of periodic external forces; method of averaging; systems with slowly varying parameters, Manley-Rowe relations; orthogonal representation of nonlinear systems; nonlinear filters and compensating systems, system optimization.

## 4603. THEORY OF LINEAR SYSTEMS II (g)

Credit 4 hrs. 3 Lect. Spring. Prerequisite, 4503. Rigorous developments of linear graph theory and of linear transformations with applications to control and communication systems. Topological properties of weighted graphs, signal-flow graphs, communication nets. Algebraic methods. Signal analysis. Functionals and properties: model making. Linear function spaces with applications to system realization, stability and sensitivity. Asymptotic expansions.

## [4604. UNIFIED THEORY OF ELECTROMECHANICAL SYSTEMS (g)]

Credit 3 hrs. 2 Lect. 1 Comp. Prerequisites, 4441 or 4442 or consent of instructor. Electric machines studied as networks of coupled circuits with periodically varying parameters; forces and torques in electromechanical systems; electromagnetic and electrostatic transducers; Kron's basic machine with its practical derivatives; the synchronous, induction, and commutator machines in the transient and steady state; frequency response methods applied to machines. Not offered 1967-68.

## ELECTROMAGNETIC THEORY

## 4511. ELECTRODYNAMICS (g)

Credit 4 hrs. Fall. 3 Lec. 1 Rec. Prerequisites, 4312 or equivalent, and co-registration in Mathematics 421 or equivalent. Foundations of electromagnetic theory; potential theory; Maxwell's equations; microscopic interpretation of permittivity and permeability; electromagnetic energy-momentum and stress tensors; interaction of fields with rigid and fluid conductors in motion; waves in various homogeneous, inhomogeneous, and anisotropic media, including plasmas; guiding of waves, cavities, radiation, and antennas; use of Green's function, perturbation, variational, and WKB methods; special relativity, fields of uniformly moving and of accelerated charges, radiation reaction. At the level of Jackson, *Classical Electrodynamics*.

## 4514. MICROWAVE THEORY (g)

Credit 4 hrs. Spring. 3 Lect. 1 Rec. Prerequisite, 4511 or equivalent. Theory of passive microwave devices for propagating, storing, coupling, or radiating microwave energy, including the theory of uniform and periodic waveguides, cavities, junctions, and antennas; application of inhomogeneous, anisotropic, dispersive, or nonlinear dielectric and magnetic materials to microwave devices; circulators, isolators, tunable filters, limiters, artificial dielectrics; techniques of analysis, including use of orthogonal functions, perturbation theory, variational techniques, Green's functions, and symmetry principles.

## 4567. ANTENNAS AND RADIATION (g)

Credit 3 hrs. Fall. 3 Lect. Prerequisites, 4312, 4401 or equivalent. Formulation of the electromagnetic field in terms of vector and scalar potentials; radiation from elemental electric and magnetic dipoles. Linear radiators: radiation from short dipoles, small loops; resonant wire antennas; long wire antennas, linear arrays and pattern synthesis; impedance properties of wire antennas, including mutual impedance, parasitic elements; wire receiving antennas. Aperture antennas: uniqueness theorem for vector fields, equivalence and induction principles; radiation from open-ended waveguides, horn antennas, reflector antennas; Babinet's principle; slot antennas. At the level of Jordan: *Electromagnetic Waves and Radiating Systems*.

## [4568. ADVANCED ANTENNA METHODS AND PROBLEMS (g)]

Credit 3 hrs. Spring. 3 Lect. Prerequisites, 4567 or equivalent, 4511 or equivalent. Huygens' principle for electromagnetic fields, application to problems of diffraction and aperture radiators; surfacewave antennas; various specialized antennas, helical, log periodic, radio astronomy systems, space and satellite systems; radiation in dielectric and plasma media, including media in motion; antenna thermodynamics. Not offered 1967-68.

## LABORATORY

## 4421-4422. ADVANCED ELECTRICAL LABORATORY (u)

Credit 4 hrs. May be taken in the fall and spring terms consecutively or separately. 1 Lect. 2 Lab. Prerequisite, 4322 or consent of instructor. Advanced experiments concerning a wide range of topics appropriate to electrical engineering, and lectures concerning experimental techniques and practical aspects of electronics. About thirty different experiments are available concerning topics of transistor and tube amplifiers, feedback, class-C amplifiers and oscillators, gyrators, doubletuned circuits, push-pull amplifiers, multivibrators, operational amplifiers, switching systems, oscillator synchronization, noise properties, microwave circuits, microwave propagation and scattering, semiconductor properties such as the hall effect and minority carrier mobility, helicon waves, Gunn and avalanche diode oscillators, lasers, propagation of electromagnetic waves, antennas, and a-c and d-c machines. The student is expected to perform three or four experiments per term, selected to meet his needs. Emphasis is placed upon independent work.

## 4520. GRADUATE LABORATORY (g)

Credit 3 hrs. Fall normally, but either term if demand is sufficient. 1 Lab. Choice of three to five experiments in the fields of solid-state and quantum electronics, microwave electronics, vacuum and physical electronics, optics, radio and communication circuits, networks, transmission lines, antennas, propagation of electromagnetic waves, plasma physics, and electrical machinery.

## ELECTRONICS

## 4431-4432. ELECTRONIC CIRCUIT DESIGN (u)

Credit 3 hrs. per term. Throughout the year. 2 Lect.-Rec. 1 Lab. Prerequisite, 4322. Design techniques for circuits used in electronic instrumentation. Circuits will be designed to provide specific functions then constructed and tested in the laboratory. At the level of Millman and Taub, *Pulse Digital and Switching Waveforms*.

## 4433. SEMICONDUCTOR ELECTRONICS I (u,g)

Credit 4 hrs. Fall. 3 Lect. 1 Lab. Prerequisites, 4302 and 4322. Band theory of solids; properties of semiconductor materials; the physical theory of p-n junctions, metal-semiconductor contacts, and p-n junction devices; device fabrication; properties of semiconductor devices such as diodes and rectifiers, light-sensitive and light emitting devices, field-effect and bipolar transistors, unijunction transistors, p-n-p-n devices (diodes, controlled rectifiers, and switches), etc.; device equivalent-circuit models; field-effect and bipolar transistor amplifier stages. At the level of the Semiconductor Electronics Education Committee (S.E.E.C.) Series, Vols. 1-4.

## 4434. SEMICONDUCTOR ELECTRONICS II (u,g)

Credit 4 hours. Spring. 2 Lect. 2 Lab. Prerequisite, 4433. A continuation of Semiconductor Electronics I with emphasis on the application of semiconductor devices as active or passive elements in circuits for use as power supplies, power controls, amplifiers, oscillators and multivibrators, pulse circuits, gates and switches, etc.; transistor noise; integrated circuits. At the level of the S.E.E.C. Series, Vols. 5 and 6; and *Semiconductor Controlled Rectifiers: Principles and Applications of p-n-p-n Devices* by Gentry, et al.

## 4531. QUANTUM ELECTRONICS I (g)

Credit 4 hrs. Fall. 3 Lect., 1 Rec.-Comp. Prerequisites, 4311, 4412, and Physics 443 or 4411. A detailed treatment of the physical principles underlying microwave and optical masers and related fields. Topics will include a brief review of quantum mechanics and the theory of angular momentum; spectroscopy of free atoms and ions with particular emphasis on the application of the results to neutral and ionized noble gas masers; theory of interaction of radiation and matter; quantum theory of coherence; a thorough study of the steady-state and dynamic characteristics of microwave and optical masers. At the level of Smith and Sorokin, *The Laser*.

## 4532. QUANTUM ELECTRONICS II (g)

Credit 4 hrs. Spring. 3 Lect. 1 Rec.-Comp. Prerequisite, 4531 or consent of instructor. A continuation of the treatment of the physical principles underlying masers and related fields. Topics will include a consideration of microwave and optical spectroscopy of impurity ions in solids with particular emphasis on the application of the results to microwave and optical solid state masers; density matrix and its applications in the study of masers and related problems; nonlinear optical phenomena and multiplephoton processes; interaction of intense light waves with molecular vibrations and elastic waves; theory and properties of molecular and semiconductor masers; characteristics of optical resonators. At the level of Smith and Sorokin, *The Laser*.

## 4535. SOLID STATE DEVICES I (g)

Credit 4 hrs. Fall. 3 Lect. Prerequisite, 4412 or equivalent. Available to fourth-year students with permission of instructor. A study of the physical theories underlying semiconductor devices with emphasis on low frequency operation (below 1000 GHz). Devices based on the tunnel effect: tunnel diodes, field emitter cathodes, thin film resistors. Devices based on charge flow across semiconductor-semiconductor contacts: p-n diodes, avalanche diodes, transistors, field-effect transistors, unipolar transistors. Devices based on metal-semiconductor contacts: Schottky diode, Schottky triode. Emphasis is placed on determining the factors determining performance capabilities. Equivalent circuits are developed. The student will carry out either a term laboratory

project or prepare a term paper on an appropriate contemporary topic. The course is presented at the level of Moll, *Physics of Semiconductors* (McGraw Hill), and of current papers published in the *IEEE Transactions on Electron Devices*.

#### 4536. SOLID STATE DEVICES II (g)

Credit 4 hrs. Spring. 3 Lect. Prerequisite, 4551 or equivalent. Available to fourth-year students with permission of instructor. A study of the physical theories underlying semiconductor devices with emphasis on high frequency operation (above 1000 GHz). The approaches to the analysis to be studied are: Ballistic analysis, electronic-network analysis (Llewellyn-Peterson), space-charge wave and coupled-mode analysis. Devices studied include: avalanche microwave diode (Read diode), microwave transistors, tunnel diodes, Gunn oscillators, injection lasers. Emphasis is placed on determining the factors that determine the performance capabilities. Equivalent circuits are developed. The student will carry out either a term laboratory project or prepare a term paper on an appropriate contemporary topic. The course is presented at the level of current papers published in the *IEEE Transactions on Electron Devices*.

#### 4538. ELECTROMAGNETIC PROPERTIES OF SOLIDS (g)

Credit 4 hrs. Spring. 3 Lect. 1 Lec. Prerequisites, Physics 454 or 4412 and 4511 (Electrodynamics) or consent of instructor. Microscopic interpretation of complex permittivity and permeability: electronic, atomic, orientation and space charge polarization; interaction of elementary magnetic moments; dielectric dispersion via resonance and relaxation, plasma resonance; quantum theory of dielectric constant; local internal field and spontaneous ordering; introductory lattice dynamics, lattice frequency spectrum, introductory group theory and application to derivation of selection rules for infrared and Raman active normal modes; extended frequency analysis of vibrational spectra.

#### 4631. ADVANCED MICROWAVE ELECTRONICS (g)

Credit 4 hrs. Fall. 3 Lect. 1 Comp. Prerequisite, 4536 or 4552. Physical theory of waveguides and cavities containing gaseous and solid state plasma, including dispersion, periodicity, modes, impedance, coupling and perturbation; microwave physics of gaseous and solid state plasmas, and drifting electrons; active effects of drifting electrons; charge avalanching, transferred electrons as in Gunn effect, and of microwave acoustic and Helicon waves.

### POWER SYSTEMS AND MACHINERY

#### [4441. CONTEMPORARY ELECTRICAL MACHINERY I (u)]

Credit 3 hrs. Fall. 2 Lect.-Rec. 1 Lab.-Comp. Prerequisite, 4302. Emphasis on engineering principles. Real and reactive power requirements of core materials with symmetrical and with biased magnetizing forces; analysis and characteristic prediction of high-efficiency transformers; magnetic amplifiers, energy transfers among electric circuits, magnetic fields and mechanical systems; control of magnetic field distribution by reluctance and winding distribution; travelling fields from polyphase excitation; elementary idealized commutator-type, asynchronous, and synchronous machines. Not offered 1967-68.

#### [4442. CONTEMPORARY ELECTRICAL MACHINERY II (u)]

Credit 3 hrs. Spring. 2 Lect.-Rec. 1 Lab.-Comp. Prerequisite, 4302. Emphasis on engineering principles. Production of air-gap magnetic fields; elementary

and idealized rotating machines; steady-state and transient characteristics of realistic rotating machines; a-c commutator-type single-phase motors; poly-phase synchronous, and single phase induction machines; recently developed types: Saturistor motor, self-excited a-c generators; miscellaneous rotary devices; Hysteresis motor, selsyns, amplidyne, frequency converters. Not offered 1967-68.

#### 4443. POWER SYSTEM EQUIPMENT (u)

Credit 3 hrs. Fall. 2 Lect. 1 Comp. Prerequisite, 4302. System equipment and control parameters are studied. Test requirements for electrical apparatus for conventional and nuclear electrical power production and distribution are considered. Prime movers, generators and their accessories, switchgear, protective devices, power transformers, converters, towers, conductors, regulating devices, and data gathering and computer control systems are analyzed. Inspections of nearby station equipment are planned to supplement classroom work.

#### 4444. HIGH VOLTAGE PHENOMENA (u)

Credit 3 hrs. Spring. Prerequisite, 4302. The study of problems of the normal operation of power systems at very high voltages, of the abnormal conditions imposed by lightning, of the methods employed to assure proper operation of power systems and apparatus under high-voltage conditions, and of the devices available for laboratory testing of equipment under actual or simulated conditions. An invitation to visit electrical manufacturing test facilities is usually accepted. Considerable attention is given to dielectric behavior and testing techniques.

#### 4445-4446. ELECTRIC ENERGY SYSTEMS I AND II (u,g)

Credit 4 hrs. per term. 3 Lect.-Rec.-Comp. Prerequisites, 4422 or 4302 and consent of instructor. The physical and engineering principles underlying steady-state and transient operation and control of modern electric-power systems, with emphasis on the characteristics of major power-system parameters. Theory of electromechanical energy converters, power transformers, conventional transmission lines and cables, high-voltage-direct-current systems, power networks and other power-system components; use of the digital computer as a dynamic "laboratory" model of a complex power system for load flow, fault, transient stability, and economic-analysis studies. Laboratory-computing periods will include selected experiments with electromechanical energy converters. At the level of Stevenson, *Elements of Power System Analysis* (2nd ed.).

### RADIO AND PLASMA PHYSICS

#### 4461. WAVE PHENOMENA IN THE ATMOSPHERE (u,g)

Credit 3 hrs. Fall. 3 Lect.-Rec. Prerequisites, 4302, 4312. An elementary treatment of wave phenomena in the atmosphere of the earth including gravity waves, planetary waves, acoustic waves, radio waves, and plasma waves; attention is directed to the role of these phenomena in various atmospheric processes and engineering problems, such as weather, pollution, radio communication, atomic fall-out.

#### 4462. RADIO ENGINEERING (u,g)

Credit 3 hrs. Spring. 3 Lect.-Rec. Prerequisites, 4312, 4401. A study of electrical systems for communications, control, detection, and other purposes, in which

radiowaves play a central role: system functions, including generation, modulation, transmission, reception, and demodulation; guidance, radiation, and propagation of radiowaves, including transmission lines and waveguides, antenna systems, and the effects of atmospheric inhomogeneity; system design problems.

#### 4561. INTRODUCTION TO PLASMA PHYSICS (u,g)

Credit 3 hrs. Fall. 3 Lect. Prerequisites, 4311, 4312 or equivalent. Open to fourth-year students at discretion of instructor. Plasma state; motion of charged particles in fields; adiabatic invariants, collisions, coulomb scattering; Langevin equation; transport coefficients, ambipolar diffusion, plasma oscillations and waves; hydromagnetic equations; plasma confinement, energy principles and microscopic instabilities; test particle in a plasma; elementary applications. At the level of Longmire, *Elementary Plasma Physics*.

#### 4562. WAVES IN PLASMAS (u,g)

Credit 3 hrs. Spring. 3 Lect. Prerequisite, 4561. Magnetoactive cold plasma theory, CMA diagrams, plasma and cyclotron waves, whistlers, hydromagnetic waves, bounded plasmas, shocks, radiation; applications to laboratory and natural phenomena. At the level of Stix, *Theory of Plasma Waves*.

#### 4564. ADVANCED PLASMA PHYSICS (u,g)

Credit 3 hrs. Spring. 3 Lect. Prerequisite, 4561. Boltzmann and Vlasov equations; moments of kinetic equation, Chew-Goldberger-Low theory, waves in hot plasmas, Landau damping, instabilities due to anisotropies in velocity space, gradients in magnetic field, temperature and density, etc.; effects of collisions and Fokker-Planck terms; high frequency conductivity and fluctuations, quasi-linear theory; nonlinear wave interaction, weak turbulence and turbulent diffusion.

#### 4565-4566. RADIOPHYSICS OF THE ATMOSPHERE I AND II (g)

Credit 3 hrs. each term. Fall and spring. Prerequisites, 4312, 4401 or equivalent. Structure of the earth's atmosphere, with particular emphasis on the use of radio waves as diagnostic tools. The course will include such topics as subionospheric propagation; propagation in the ionosphere including the Luxembourg effect and Faraday rotation; whistler-mode propagation, ion effects and ion whistlers; the CMA diagram, Astrom's equation, group velocity in anisotropic media and ray tracing; full wave solutions for slowly varying media; thermal effects including ion-acoustic waves, damping and growth of waves; radar in the ionosphere including scatter from turbulent and thermal fluctuations.

#### 4661. KINETIC EQUATIONS (g)

Credit 3 hrs. Fall. 3 Lect. Prerequisite, Physics 561, 562 or permission of instructor. Designed for students wishing a firm foundation in fluid dynamics, plasma kinetic theory, and nonequilibrium statistical mechanics. Brief review of classical dynamics. The concept of the ensemble and the theory of the Liouville equation. Prigogine and Bogoliubov analysis of the BBKGY sequence. Chapman-Kolmogorov analysis of Markovian kinetic equations. Derivation of fluid dynamics. Kinetic formulation of the stress tensor. Boltzmann, Krook, Fokker-Planck, Landau and Balescu-Lenard equations. Properties and theory of the Linear Boltzmann collision operator. Chapman-Enskog and Grad methods of solution of the Boltzmann equation. Equilibrium prescription of the approach to equilibrium. Coarse graining and ergodic theory. At the level of Prigogine, *Nonequilibrium Statistical Mechanics*.

## COMMUNICATIONS

## 4472. INTRODUCTION TO ALGEBRAIC CODING (u,g)

Credit 3 hrs. Spring. 3 Lect. Prerequisite, Mathematics 293 or equivalent. Intended for students interested in information theory or digital systems. Codes for correcting errors in data transmission or processing: Group codes, Hamming codes, Bose-Chaudhuri codes. Bounds on performance. Codes for data compression and storage: Variable-length codes, prefix codes. Codes for synchronization and their application to location of distant objects by radar. Analysis of these codes in terms of the underlying algebraic theory. Implementation by sequential machines. The algebraic theory (groups, fields, etc.) will be developed as needed.

## [4673. PRINCIPLES OF ANALOG AND DIGITAL COMMUNICATION (g)]

Credit 4 hrs. Fall. 3 Lect. Prerequisite, 4508 or consent of instructor. The course uses the fundamentals of information theory, signal theory, and statistical estimation and decision theory to formulate approaches to the solution of problems arising in digital and analog communication. Particular topics are: receiver and signal design, probability of error, capacity, threshold effects for the additive Gaussian channel. Extensions to the additive Gaussian channel: feedback, random gain and phase, diversity. Time-variant Gaussian channels; receiver and signal design, probability of error, and capacity. At the level of Viterbi, *Principles of Coherent Communication*. Not offered 1967-68.

## [4674. TRANSMISSION OF INFORMATION (g)]

Credit 4 hrs. Prerequisite, 4507 or Mathematics 571 or consent of instructor. A course applying information theory to the analysis and design of communication systems. Selection of fidelity criteria for accurate and efficient transmission of information. Efficient representation of outputs of message sources. The entropy measure and its properties. Encoding for reliable communication through discrete memoryless noisy channels. Rate of information transmission and the probability of decoding error, channel capacity. Systematic codes and the instrumentation problem. Sequential decoding. Coding and decoding for the band-limited Gaussian channel. At the level of F. Jelinek, *Probabilistic Information Theory*. Not offered 1967-68.

## 4676. DECISION AND ESTIMATION THEORY FOR SIGNAL PROCESSING (u)

Credit 4 hrs. Three lect. Fall. Prerequisite, at least concurrent registration in 4507 or Mathematics 571. An examination of selected decision or estimation problems encountered in the design and analysis of radar/sonar target discrimination, signal demodulation, and pattern classification systems. The hypotheses of risk and uncertainty, the role of objectives, criteria for evaluating decision or estimation, procedures and characteristics of such procedures. Additional topics, drawn from the fields of parametric and nonparametric statistics, empirical time series analysis, game theory, and nonprobabilistic decision or estimation procedures, will be treated as required for the resolution of the selected problems.

## COMPUTING SYSTEMS AND CONTROL

## 4481-4482. FEEDBACK CONTROL SYSTEMS (u,g)

Credit 4 hrs. Fall and spring. Prerequisite, 4302 or consent of instructor. Principles of feedback control systems with emphasis on methods of analysis

and synthesis to meet prescribed performance criteria. One-sided Laplace transform applications; electronic, electromechanical, electrohydraulic, and pneumatic components; cascade and feedback compensation of linear control systems. Common physical nonlinearities encountered in control systems; phase plane and describing function; nonlinear compensation; dual mode systems; relay control systems. Z-transform; analysis of sampled data systems; digital compensation; optimization of sampled data systems. Laboratory work consists of experiments in: components, transient and frequency response measurements; compensation on linear and nonlinear control systems; simulation, design and optimization of control systems by analog and digital computers; projects of the student's choice. At the level of D'Azzo and Houpis, *Control System Analysis and Synthesis*.

#### 4483. ANALOG COMPUTATION (u,g)

Credit 4 hrs. Fall. 2 Lect. 1 Lab. Prerequisites, concurrent registration in 4401 or an equivalent background with consent of the instructor. Concepts and principles of analog computation and simulation as applied to engineering analysis and design. Linear, time varying, and nonlinear differential equations. Automatic iterative and basic optimization techniques using digital logic. Laboratory work with general-purpose analog computers, some equipped with patchable digital logic. Course develops fundamental ideas to include subjects at the level of Levine, *Methods of Solving Engineering Problems Using Analog Computers*.

#### 4485. ALGEBRAIC FOUNDATION FOR SWITCHING SYSTEMS (u,g)

Credit 3 hrs. Fall. 3 Lect. Prerequisite, at least coregistration in 4487. Presentation of algebraic concepts essential for studies in switching systems, with emphasis on engineering applications. Topics include: sets and devices; alphabets, words and languages; mapping; relations; decomposition of sets and circuit configuration; lattices; algebraic operations and their properties, the interpretation of device terminal characteristics; semigroups, simple sequential circuits and their properties; groups, quotient groups, homomorphism and other theorems, decomposition of sequential circuits, linear sequential circuits; rings, Boolean ring and switching algebra; modules and their applications in system analysis.

#### 4487. SWITCHING SYSTEMS I (u,g)

Credit 3 hrs. Fall. 2 Lect. 1 Lab. Prerequisite, 4322. Switching algebra; switching devices; logical formulation and realization of combinational switching circuits; minimization aids; number representation and codes; simple memory devices; synchronous sequential circuits; counters; shift registers and arithmetic units in a digital computer. At the level of Torng, *Introduction to the Logic of Switching Systems*.

#### 4488. SWITCHING SYSTEMS II (u,g)

Credit 3 hrs. Spring. 3 Lect. Prerequisite, 4487 or equivalent. Synchronous and asynchronous sequential circuits, formulation and optimization; large-scale memory units, selection and control; further discussion of arithmetic units; integrated study of switching systems including general-purpose digital computer, control switching, and communicating switching; introduction to the general theory of learning machines.

#### 4589. AUTOMATA (COMPUTER SCIENCE 385) (u,g)

Credit 3 hrs. Spring. 3 Rec. Prerequisite, Mathematics 293-294 or Mathematics 221-222, or equivalent. Both the engineering and mathematical aspects of

automata will be introduced. Examples of mathematical topics: finite-state machines, neural nets, input-output machines, Turing machines, computability. Examples of engineering topics: machines that learn, adaptive systems, pattern recognition, self-reproducing and self-repairing machines, system reliability, threshold logic systems, biological models, heuristic programming, industrial technological applications, progress in devices, automatic language translation, cybernetics and robots.

#### [4681. RANDOM PROCESSES IN CONTROL SYSTEMS (g)]

Credit 4 hrs. Fall. 3 Lect. Prerequisites, 4508 and 4506. Prediction and filtering in linear control systems; Gaussian-Markov sequence, Gaussian-Markov process, prediction problem, Hamiltonian formulation of filtering problem, generalized Wiener filtering, stochastic optimal and adaptive control problems. Selected topics: Bayes decision rule, min-max policy, maximum likelihood estimate, control of systems with uncertain statistical parameters; stochastic differential equations, optimal nonlinear filtering; Gaussian input describing function, stability of control systems with random parameters. Not offered 1967-68.

### GENERAL

#### 4591-4592. PROJECT (u,g)

Credit 3 hrs. Fall and spring. Individual study, analysis, and usually experimental tests in connection with a special engineering problem chosen by the student after consultation with the faculty member directing his project; an engineering report on the project is required.

#### [4593. FUNDAMENTALS OF ACOUSTICS (u,g)]

Credit 4 hrs. Fall. 3 Lect. 1 Lab. For first year graduate students and qualified seniors. Vibrations in strings, bars, membranes and plates; plane and spherical acoustic waves; transmission, reflection, absorption, resonators, filters; loudspeakers and microphones; speech, hearing, and noise; architectural acoustics; ultrasonic and sonar transducers; underwater acoustics. At the level of Kinsler and Frey, *Fundamentals of Acoustics*. Not offered 1967-68.

#### 4595-4596. ELECTRICAL ENGINEERING DESIGN (g)

Credit 3 hrs. per term. Offered for students enrolled in the M. Eng. (E.) Program. A course utilizing real engineering situations in which to present fundamentals of engineering design.

#### 4690-4699. SPECIAL TOPICS IN ELECTRIC ENGINEERING (g)

Credit 1 to 3 hrs. Seminar, reading course, or other special arrangement agreed upon between the students and faculty members concerned.

## Courses for other Engineering Curricula

#### 341-342. INTRODUCTORY ELECTRICAL ENGINEERING (u)

Credit 3 hrs. per term. 2 Lect., 1 Rec.-Comp. Prerequisites, Math 192, Physics 122 and at least coregistration in Mathematics 293 and Physics 223. This sequence provides an introduction to the two broad interrelated areas of systems and electrophysics in electrical engineering. The four major topic areas

of circuits, electronics, control systems, and electromechanics are treated throughout the year by examining the principal devices encountered in each area and considering their application. Although emphasis is placed on practical aspects, a unified treatment of devices and circuits is developed which can be applied to advanced topics beyond the scope of the sequence. Some specific devices considered are transformers, tubes, transistors, volt and ammeters, motors, and generators. At the level of Del Toro, *Principles of Electrical Engineering*.

#### 4921-4922. ELECTRICAL ENGINEERING LABORATORY (u)

Credit 1 hr. each term. 1 Lab. An introduction to electrical and electronic instrumentation, high-vacuum and solid-state devices, analog computation, and switching circuits.

## ENGINEERING PHYSICS

#### 8051 and 8052. PROJECT (g)

Credit 3 hrs. Fall and spring. Informal study under direction of a member of the University staff. The objective is to develop self-reliance and initiative, as well as to gain experience with methods of attack and with overall planning, in the carrying out of a special problem related to the student's field of interest.

#### 8090. INFORMAL STUDY IN ENGINEERING PHYSICS (u,g)

Fall or spring. Laboratory or theoretical work in any branch of engineering physics under the direction of a member of the staff. Hours to be arranged.

#### 8121. THERMODYNAMICS AND FLUID MECHANICS (u)

Credit 3 hrs. Fall. Classical thermodynamics and applications, compressible one-dimensional flows and shock waves; introduction to fluid mechanics. The general level of sophistication expected in 8121-8122 is that of the fourth-year student in engineering physics.

#### 8122. STATISTICAL MECHANICS AND KINETIC THEORY (u)

Credit 3 hrs. Spring. Prerequisite, 8121 or equivalent. Ensembles and partition functions, ideal quantum and classical gases, imperfect gases, distributions and correlation functions. Random walks and Brownian motion, fluctuations, kinetic theory. At the level of F-Reif, *Fundamentals of Statistical and Thermal Physics*.

#### 8133. MECHANICS OF PARTICLES AND SOLID BODIES (u)

Credit 3 hrs. Fall. 3 Rec. Primarily for majors in engineering physics. Newton's laws, harmonic oscillator, Fourier series and Green's function solutions, Lagrange equations, Hamiltonian formalism, central force motion, orbits, scattering, cross-sections. Many particle dynamics, Lagrangian formulation. Lorentz transformation.

#### 8134. MECHANICS OF CONTINUA (u)

Credit 3 hrs. Spring. 3 Rec. Primarily for majors in engineering physics. Mechanics of continua, equilibrium, propagation of sound waves. Elasticity, torsion, shear, bending stresses.

**8205. ELECTRICAL AND MAGNETIC PROPERTIES OF ENGINEERING MATERIALS (g)**

Credit 3 hrs. Fall. (Same as 6605.) Prerequisite, Physics 454 or consent of instructor. Electrical properties of semiconductors. Metallic alloys. Ferromagnetic materials. Superconductivity. Optical and dielectric properties of insulators and semiconductors. At the level of Kittel, *Introduction to Solid State Physics*; Chikazumi, *Physics of Magnetism*; Lynton, *Superconductivity*; Livingston and Schadler, *The Effect of Metallurgical Variables on Superconductivity Properties*.

**8211. PRINCIPLES OF DIFFRACTION (g)**

Credit 3 hrs. Fall. Offered jointly with the Department of Materials Science and Engineering. Production of neutrons, X-rays, absorption, scattering, Compton effect. Diffraction from periodic lattices, crystal symmetry, single crystal and powder techniques. Fourier methods, thermal vibration and scattering, diffraction from liquids and gases, introduction to dynamical diffraction of X-rays and electrons, extinction phenomena, and perfect crystals. Selected experiments in diffraction.

**8212. SELECTED TOPICS IN DIFFRACTION (g)**

Credit 3 hrs. Spring. 3 Lect. Prerequisite, 8211. Offered jointly with the Department of Materials Science and Engineering. Dynamical diffraction: Ewald-von Laue theory of dynamical diffraction applied to X-rays and electrons. Currently developing theory and application to defects in solids. Phenomena investigated via diffuse scattering: phonons, measurement of dispersion curves, frequency spectrum, Debye temperatures, vibrational amplitudes. Order-disorder phenomena: short and long-range order, Guinier-Preston zones. Selected topics of current interest related to X-ray, neutron, and electron diffraction, with contributions from other members of the faculty.

**8252. SELECTED TOPICS IN PHYSICS OF ENGINEERING MATERIALS (g)**

Credit 1 hr. Fall. Primarily for candidates for Master of Engineering (Engineering Physics); others with consent of instructor. Seminar-type discussion of special topics in the field of engineering materials, such as plastic and rheological properties; dielectric and magnetic behavior; semiconductors; radiation damage, etc. Emphasis is given to the interpretation of the phenomena in light of modern theories in physics of solids and liquids and their impact on the engineering applications. Current literature is included in the assignments.

**8262. PHYSICS OF SOLID SURFACES (g)**

Credit 3 hrs. Spring. A lecture course for graduate students and upperclassmen offered jointly with the Department of Materials Science and Engineering. (6762). An introductory critical review of advances in the theory of the solid-state related directly to surface phenomena. Thermodynamics of surface phases, atomistic theory of surfaces and dynamics of interaction of electrons, ions and atoms with surfaces are considered. Reference is made to application of the theory to surface and interface phenomena in metals, insulators and semiconductors as much as possible. Presented at the level of *Advances in Solid State Physics*, Editors, Seitz and Turnbull.

**8303. INTRODUCTION TO NUCLEAR ENGINEERING (u)**

Credit 3 hrs. Fall. A lecture course for third- and fourth-year students. Objectives include relating the experience of students in other fields to

nuclear engineering and introducing this subject to students who may wish to specialize in it. Topics include: review of nuclear physics, nuclear fission, nuclear reactor theory, radiation shielding, materials of construction of nuclear reactors, nuclear reactor core design, instrumentation and control of nuclear reactors, the separation of stable isotopes, chemical separation and processing of nuclear materials, and thermo-nuclear power. At the level of *Introduction to Nuclear Engineering* by R. L. Murray (2nd ed.; Prentice Hall 1961).

#### 8309. LOW ENERGY NUCLEAR PHYSICS (g)

Credit 4 hrs. Spring. 3 Lect. Prerequisite, an introductory course in atomic and nuclear physics including quantum mechanics. Low energy nuclear physics as an organized body of experimental facts. Properties of ground and excited states of nuclei; models of nuclear structure; low energy nuclear reactions — scattering, absorption, fission, resonance effects, coherent scattering effects. At a level between *Introductory Nuclear Physics* by Halliday, and *Nuclear Physics* by Fermi.

#### 8312. NUCLEAR REACTOR THEORY (g)

Credit 4 hrs. Fall. 3 Lect. Prerequisites, one year of advanced calculus and an introductory course in atomic and nuclear physics. The physical processes in neutron chain reactors are described. The theory of neutron diffusion and slowing down is developed and applied to those processes. Neutron transport theory is introduced at the level of *Nuclear Reactor Theory* by Lamarsh.

#### 8313. REACTOR THEORY II (g)

Credit 3 hrs. 3 Lect. Continuation of 8312 primarily intended for students planning to do research in the fields of reactor physics and reactor engineering. Delayed neutron kinetics, fission product poisoning, nonlinear kinetics, perturbation theory, temperature coefficients, control rod theory, hydrogenous reactors, neutron transport and heterogeneous reactor theory. At the level of *The Physical Theory of Neutron Chain Reactors* by Weinberg and Wigner.

#### 8314. NEUTRON TRANSPORT THEORY (g)

Credit 3 hrs. 3 Lect. Prerequisite, 8312 or consent of instructor. The linear Boltzmann equation describing neutron migration in matter is intensively studied. Topics will vary, but may include Milne's problem, neutron thermalization, deep penetration of radiation, as well as a formal development of approximate methods of solution. At the level of *Neutron Transport Theory* by Davison. Offered in alternate years.

#### 8333. NUCLEAR REACTOR ENGINEERING (g)

Credit 4 hrs. Fall. 3 Lect. Prerequisite, consent of instructor. A selected set of topics representing the fundamentals of nuclear reactor engineering; energy conversion and power plant thermodynamics, fluid flow and heat transfer, thermal stresses, radiation protection and shielding, materials for nuclear reactors, economics of nuclear power and fuel cycles, instrumentation and control. At the level of *Nuclear Reactor Engineering* by Glasstone and Sesonske.

#### 8334. NUCLEAR ENGINEERING DESIGN SEMINAR (g)

Credit 4 hrs. Spring. Prerequisite, 8333. A conceptual design study of a nuclear reactor system. Emphasis on the interplay of requirements of safety and economics in the design of nuclear power systems.

**8336. NUCLEAR MATERIALS (g)**

Credit 3 hrs. Spring. 3 Lect. Prerequisites, Materials Science, Physical Chemistry, or equivalent and consent of instructor. At level of courses for the M.Eng. degree, for example, M.Eng. (Nuclear). Same as Materials Science 6872.

**8351. NUCLEAR MEASUREMENTS LABORATORY (g)**

Credit 4 hrs. Either term. Two 2½-hour afternoon periods. Prerequisite, some knowledge of nuclear physics. Laboratory experiments plus lectures on interaction of radiation with matter and on radiation detection, including electronic circuits. Some twenty different experiments are available in the fields of nuclear and reactor physics. Among these are experiments on emission and absorption of radiation; on radiation detectors and nuclear electronic circuits; on interactions of neutrons with matter (absorption, scattering, moderation, and diffusion); on activation analysis and radiochemistry; and on properties of a subcritical assembly. Many of the experiments use the TRIGA Reactor. The student is expected to perform eight to ten experiments, selected to meet his needs. Some stress is laid on independent work by the student.

**8352. ADVANCED NUCLEAR AND REACTOR LABORATORY (g)**

Credit 3 hrs. Either term. Two 2½-hour afternoon periods. Prerequisites, 8351 and 8309 or 8312. Laboratory experiments plus lectures on experimental methods in nuclear physics and reactor physics. Some ten different experiments are available, among them ones using the Zero Power Reactor critical facility.

**[8601. PHYSICAL APPROACHES TO PROBLEMS OF PHOTOSYNTHESIS (g)]**

Credit 3 hrs. Fall. (Same as Bio. Sci. 545) Given in alternate years. Prerequisites, Chemistry 104 or 108, Mathematics 112, Physics 208, or by permission of the instructor. Lectures M 1:25, T Th 10:10. Plant Science 37. Professor Clayton. Emphasis is on physical and photochemical mechanisms and physical experimental approaches. Photosynthetic organisms; their photochemical apparatus, metabolic pathways, and mechanisms for energy conversion. Descriptive introduction to the physics of excited states in molecules and molecular aggregates. Optical and photochemical properties of chlorophyll, and of the living photosynthetic tissue. Contemporary investigations of the photosynthetic mechanism. The level of the course can be judged by consulting *Molecular Physics in Photosynthesis*, R. K. Clayton (Blaisdell Publishing Co., Waltham, 1965). Not offered 1967-68.

**8603. GENERAL PHOTOBIOLOGY (g)**

Credit 3 hrs. Fall. (Same as Bio. Sci. 547) Given in alternate years. Prerequisites same as for Bio. Sci. 545. Lectures M 1:25, T Th 10:10. A survey of systems of current interest in photobiology, including photosynthesis, bioluminescence, vision, photoperiodism, and the action of ultraviolet on nucleic acids. Physical concepts and methodologies are emphasized.

## INDUSTRIAL ENGINEERING OPERATIONS RESEARCH

### Service Courses

#### [9101. INDUSTRIAL ORGANIZATION AND MANAGEMENT (u)]

Credit 3 hrs. Spring. 3 Lect. Management of an industrial enterprise; internal organization; effect of type of product, methods of manufacture, size of enterprise, and personnel involved; types of enterprises; plant location; centralization and decentralization trends; diversification and specialization; growth of industry. Not offered in 1967-68.

#### 9110. INTRODUCTORY INDUSTRIAL ENGINEERING (u)

Credit 3 hrs. Spring. 2 Rec., 1 Lab.-Comp. Prerequisite, 9170. An introduction to modern industrial engineering with emphasis on the design activities of industrial engineers in specifying workplaces into integrated man-machine activity in such systems. Queuing theory, line balancing, and introductory concepts of linear programming will be presented as analytical methods to be used in the analysis of plant design problems. Laboratory work and computing problems will be drawn from situations of interest to chemical, mechanical, electrical, and civil engineers.

#### [9153. ENGINEERING ECONOMIC ANALYSIS (u)]

Credit 3 hrs. Fall. 2 Rec., 1 Comp. An introduction to underlying economic principles and phenomena associated with engineering projects. Basic accounting and cost control principles and procedures will be presented initially as a frame of reference for a discussion of the more profound problems relating to the engineer's role as consultant on matters of investment and operations. In addition to the necessary accounting, topics will include cost concepts, profit-volume relationships and analysis, make-buy problems, minimum cost models, replacement and renewal models, etc. Not offered in 1967-68.

#### 9170. INTRODUCTORY ENGINEERING STATISTICS (u)

Credit 3 hrs. Both terms. 2 Rec., 1 Comp. Prerequisite, Mathematics 294 or equivalent. Applications of probability theory and statistics to industrial and engineering problems; point and confidence interval estimation; statistical testing of hypothesis; properties of binomial, Poisson, and hypergeometric distributions, and applications to sampling inspection problems; large sample theory and the normal distribution, small sample theory and Student's *t* and Chi-square distributions; introduction to correlation theory and curve fitting by least squares.

### Required Courses

#### 9301. INTRODUCTION TO INDUSTRIAL ENGINEERING (u)

Credit 3 hrs. Fall. 2 Lect., 1 Rec. An introduction to industrial engineering with emphasis on the changing character of modern industrial engineering practice. The work of the early industrial engineers will be studied and the impact of the developing science of operations on design methodology associated with the engineering of complex man-machine systems will be reviewed. The relationship of systems engineering, industrial engineering, adminis-

trative engineering, management engineering, operations engineering, operations analysis, operations research, and management science will be discussed. Typical problems of interest to present-day industrial engineers and researchers will also be discussed to demonstrate the range of interest and application of industrial engineering methodology.

#### 9303. INDUSTRIAL ENGINEERING LABORATORY (u)

Credit 4 hrs. Spring. 2 Lect., 2 Lab. Emphasis will be placed on the development of the scientific method as it relates to industrial engineering situations. Problem definition, development of hypotheses, and experimentation will be discussed with relevant techniques of measurement, estimation, design of experiments, prediction, and performance evaluation.

#### 9310. INDUSTRIAL ENGINEERING ANALYSIS (u)

Credit 4 hrs. Fall. 3 Lect., 1 Comp. Prerequisites, 9350 and 9370, or equivalent. This is a problem-oriented course concerned with the application of cost, probability, and statistical theories in the analysis and evaluation of data typical to industrial engineering and operations research. Among the topics included are process capability studies; tests for statistical control; industrial sampling inspection procedures; statistical techniques in life and reliability analysis; engineering economic analysis for investment and replacement; work measurement; and probabilistic methods in inventory planning.

#### 9320. ANALYTICAL METHODS IN INDUSTRIAL ENGINEERING (u)

Credit 4 hrs. Fall. 3 Lect.-Rec., 1 Comp. Prerequisite, 9350. Analytical techniques for the solution of design, planning, and operational problems. Linear programming and the simplex method; transportation problem and assignment problems as special cases; the dual and its interpretation; the quadratic assignment problem. Flows in networks and flow algorithms; application to the transportation problem. Practical application of these techniques to make-buy decisions, product mix problems, facility allocation, machine grouping, routing of materials handling equipment, raw material blending, and general operational planning problems. Introduction to inventory and queuing analysis.

#### 9321. PRODUCTION PLANNING AND CONTROL (u)

Credit 4 hrs. Spring. 3 Rec., 1 Comp. Prerequisite, 9360, and 9320 or equivalent. Methods for the planning and control of large-scale operations with emphasis on manufacturing systems. Among the areas covered will be sales and production forecasting; manufacturing planning; routing; scheduling and loading; sequencing; dispatching; planning and control of inventories. Emphasis will be on mathematical and statistical methods for performing these functions; however, the empirical systems and procedures in common use will also be discussed and evaluated.

#### 9350. COST ACCOUNTING, ANALYSIS, AND CONTROL (u)

Credit 4 hrs. Fall. 3 Lec.-Rec., 1 Comp. Accounting theory and procedures, financial reports; product costing in job order and process cost systems—historical and standard costs; cost characteristics and concepts for analysis, control, and decision making; differences between accounting and engineering objectives in the development and uses of cost data. Capital budgeting, investment planning, and introduction to decision making based on economic criteria.

**9360. INTRODUCTION TO PROBABILITY THEORY WITH ENGINEERING APPLICATIONS (u)**

Credit 4 hrs. Fall. 3 Lect.-Rec., 1 Comp. Prerequisite, Mathematics 294 or equivalent. Definition of probability and basic rules of probability theory. Random variables, probability distributions, and expected values. Special distributions important in engineering work and relations among them; elementary limit theorems. Introduction to stochastic processes and Markov chains, and their applications in the construction of mathematical models of operation, with emphasis on queuing and inventory models.

**9370. INTRODUCTION TO STATISTICAL THEORY WITH ENGINEERING APPLICATIONS (u)**

Credit 4 hrs. Spring. 3 Lect.-Rec., 1 Comp. Prerequisite, 9360. The application of statistical theory to problems associated with the analysis of data and inferences drawn therefrom. Principles of statistical inference: estimating the value of unknown parameters of probability distributions, testing hypotheses concerning these parameters; elements of statistical decision theory. Introduction to correlation theory and curve fitting by least squares. Applications in regression, statistical control, and experimentation.

**9381. INTRODUCTION TO COMPUTER SCIENCE (u)**

Credit 3 hrs. Spring. 2 Lect., 1 Rec.-Comp. Introduction to the field of computer sciences including principles and characteristics of information processing equipment, programming languages, and applications. Topics are selected to illustrate a wide range of current and potential areas of application with emphasis being placed on the modern digital computer as a symbol manipulating device rather than as an arithmetic calculator. Number systems, computer logic and organization, and characteristics of current equipment are covered along with various aspects of programming. Also, introductory concepts and problems associated with using computers in information processing systems, real-time control systems, simulated experimentation, and the design process are considered.

## Graduate Honors Section of Undergraduate Courses

Registration in the following courses will be by permission of the instructor or department head only. Registrants will be limited to those undergraduates enrolled in an Honors program or to graduate students taking a major, a minor, or an advanced professional degree in the Graduate Field of Operations Research. Other qualified students will be admitted only if section sizes permit it.

**9460. INTRODUCTION TO PROBABILITY THEORY WITH ENGINEERING APPLICATIONS (u,g)**

Credit 4 hrs. Fall. 3 Lect.-Rec., 1 Comp. This course covers the same topics as 9360 described above, but all lectures are independent of 9360 lectures.

**9470. INTRODUCTION TO STATISTICAL THEORY WITH ENGINEERING APPLICATIONS (u,g)**

Credit 4 hrs. Spring. 3 Lect., 1 Rec.-Comp. Prerequisites, 9360, 9460. This course covers the same topics as 9370 described above. The lectures are

held concurrently with 9370. The recitation-computing session is independent of the 9370 recitations.

**9481. INTRODUCTION TO COMPUTER SCIENCE (Comp. Sc. 401) (u,g)**

Credit 4 hrs. Fall. 3 Lect., 1 Rec.-Comp. This course covers the same topics as 9381 described above.

## Elective and Graduate Courses

**[9501. ENGINEERING ADMINISTRATION (g)]**

Credit 3 hrs. Spring. 3 Lect.-Rec. Prerequisite, graduate standing. Organization of the engineering function, planning and analysis of engineering activities. Project management and control. Problems of innovation and introducing technological change. Measurement and evaluation of engineering activities. Selected topics from current literature. Not offered in 1967-68.

**9511. MANUFACTURING ENGINEERING (g)**

Credit 3 hrs. Fall. 1 Lect., 1 Rec.-Comp. Intended for graduates or qualified undergraduates. Prerequisite, 9311. The analysis and design of production facilities based on output requirements of the system. Attention will be directed towards the interaction of processing methods and requirements with handling methods and storage facilities. The effects of various levels of mechanization on operating costs and initial investment will be studied.

**9512. STATISTICAL METHODS IN QUALITY AND RELIABILITY CONTROL (u,g)**

Credit 3 hrs. Spring. 3 Lect. Prerequisite, 9170 or equivalent. A basic course primarily for undergraduates presented from an engineering standpoint. Control concepts; control chart methods for attributes and for variables; process capability analysis; attributes acceptance sampling plans and procedures; double and multiple sampling inspection; elementary plans and procedures for variables; acceptance-rectification procedures; basic reliability concepts; exponential and normal distributions as models for reliability application; life and reliability analysis of components; analysis of series and parallel systems; stand-by and redundancy; elementary sampling-inspection procedures used for life and reliability.

**[9513. SYSTEMS ENGINEERING (g)]**

Credit 3 hrs. Spring. 2 Rec., 1 Lab. Elective for graduate students and qualified undergraduates. Prerequisite, 9320 and 9370 or permission. Methods of describing, analyzing, and manipulating complex, interrelated open systems. Graphical and mathematical analysis. Techniques of design of transportation, service, and information systems and appropriate evaluation methods. Not offered in 1967-68.

**9522. OPERATIONS RESEARCH I (g)**

Credit 3 hrs. Fall. 3 Lec.-Rec. Prerequisite, permission of the instructor. Not open to students who have had 9320. Model design, methodology of operations research, linear programming, transportation problem, assignment problem, dual theorem, parametric linear programming, integer programming, non-linear programming, dynamic programming, introduction to inventory theory; comprehensive problems and case studies.

**9523. OPERATIONS RESEARCH II (g)**

Credit 3 hrs. Spring. 3 Lec.-Rec. Prerequisites, 9360 or 9170, or permission of the instructor. Not open to students who have had 9526. Models for inventory and production control; replacement theory; queuing including standard birth and death process model and non-standard models, application of queuing theory; simulation; game theory, illustrative examples and problems.

**9524. PROBLEMS IN OPERATIONS RESEARCH (g)**

Credit 3 hrs. One 2-hr. meeting a week. Prerequisite, 9523 or equivalent. An advanced seminar concentrating on problem definition, measures of effectiveness, applicability of various analytical methods to the solution of real problems.

**9525. FLOW AND SCHEDULING IN NETWORKS (g)**

Credit 3 hrs. Spring. 3 Lec.-Rec. Elective for graduate students. Network analysis for continuous static flow; feasibility theorems, capacity determination, minimal cost operation. Sequencing models for deterministic discrete flow networks. Determination of capacity, routing and discipline for networks of queues.

**9526. MATHEMATICAL MODELS — DEVELOPMENT AND APPLICATION (g)**

Credit 4 hrs. Fall. 3 Lec.-Rec., 1 Comp. Prerequisites, 9311 and 9320 or permission of the instructor. Required of professional degree graduate students, elective for others. This course will examine in some detail both probabilistic and deterministic models used in industrial engineering work. An examination and study of some of the standard models found in the literature will be made.

**9529. PROBLEMS AND TECHNIQUES IN OPTIMIZATION (g)**

Credit 3 hrs. Spring. 3 Lec. Prerequisites, 9360 and 9320. The application of a variety of operations research techniques and analytical skills in actual concrete situations. Lectures on enumeration methods as found in branch and bound techniques, discrete dynamic programming, column generation methods, linear programming, quadratic assignment techniques, combinatorial analysis and graph theoretic techniques, and networks including techniques for handling problems of uncertainty. Problems will include multidimensional trim problems, networks and scheduling problems, maintenance problems, routing problems, selection problems, fixed charge problems, location problems, and special problems in optimal design of production and distribution systems within the context of a vertically integrated firm.

**9530. MATHEMATICAL PROGRAMMING (g)**

Credit 3 hrs. Fall. 3 Lec.-Rec. Prerequisite, permission of the instructor. Theory, methods, computational techniques, and applications of mathematical programming. Classical constrained maximization and Lagrange multipliers. Linear programming; simplex method and variations; the dual and the dual simplex method; transportation programming. Integer programming. Quadratic and convex programming. Linear and quadratic assignment programming.

**9531. DYNAMIC PROGRAMMING (g)**

Credit 3 hrs. Spring. 3 Lec.-Rec. Prerequisite, 9560. Dynamic programming as a computational technique for solving a wide variety of problems. Con-

centration on deterministic problems; the knapsack problem, the obstacle course problem, finite horizon inventory problems with known demand. Introduction to Markov sequential decision problems; Howard's algorithm in the finite state and action space case.

#### 9539. SELECTED TOPICS IN MATHEMATICAL PROGRAMMING (g)

Credit 3 hrs. Spring. 3 Lec.-Rec. Prerequisite, 9530. Topics will be selected from such areas as nonlinear, stochastic, and semi-infinite programming. Usually offered in even numbered years.

#### 9550. ENGINEERING ECONOMIC ANALYSIS (g)

Credit 3 hrs. Fall. 3 Lec. An intensive accelerated survey of financial and managerial accounting and engineering economics. Use of cost information for financial reporting, cost control and decision making. Specific topics include: theory of double-entry accrual accounting as background for subsequent material; bookkeeping is deemphasized. Use of costs in manufacturing: job order vs. process costing; predetermined overhead rates; standard costs and variances. Modification of cost information for decision making: cost dichotomies; profit-volume charts; direct costing; costing of joint products and by-products; economic lot sizes; use of costs in other models of operations research. Capital investment planning: the time value of money; use of interest rates; ranking procedures for proposed projects including the MAPI formulas; handling of risk and uncertainty.

#### 9551. ADVANCED ENGINEERING ECONOMIC ANALYSIS (g)

Credit 3 hrs. Spring. 3 Lec. Prerequisite, 9311 or equivalent. Topics include: Brief review of use of cost information for financial reporting, cost control and decision making. Intensive discussion of capital investment planning procedures. Problems in project ranking including use of payoff period, present worth, internal rate of return and MAPI urgency rating. Interdependence of productive investment, and financing decisions. The cost of capital controversy. Handling of risk and uncertainty. Applications of linear programming to capital budgeting problems. Theory of the firm including objectives, market structure and pricing policies. Measures of performance. Problems of profit measurement in the decentralized firm including intensive discussion of transfer pricing.

#### 9560. APPLIED STOCHASTIC PROCESSES (g)

Credit 4 hrs. Spring. 3 Lec., 1 Rec. Open to qualified undergraduates. Prerequisites, 9360 and 9370, or permission. An introduction to stochastic processes, emphasizing basic theory and its engineering application. The following topics are covered: Second order processes. Covariance function and spectral distribution. Markov chains and processes. Diffusion processes. Renewal theory and recurrent events. Fluctuation theory. Random walks, branching processes, queues, Brownian motion, and birth and death processes.

#### 9561. QUEUING THEORY (g)

Credit 3 hrs. Fall. 2 Rec., 1 Comp. Prerequisites, 9360 and permission of the instructor. Definition of a queuing process. Poisson and Erlang queues. Imbedded chains. Transient behavior of the systems M/G/1 and GI/M/1. The general queue GI/G/1. Bulk queues. Applications to specific engineering problems such as shop scheduling, equipment maintenance, and inventory control.

**[9562. INVENTORY THEORY (g)]**

Credit 3 hrs. Fall. 3 Lec.-Rec. Open to qualified undergraduates. Prerequisites, 9360 and permission of the instructor. An introduction to the mathematical theory of inventory and production control with emphasis on the construction and solution of mathematical models; topics will be drawn from the recent technical literature and will include deterministic and stochastic demands; dynamic programming and stationary analyses of inventory problems; renewal theory applied to inventory problems; multi-echelon problems; statistical problems; and production smoothing. Not offered in 1967-68.

**9563. SELECTED TOPICS IN THE THEORY OF QUALITY AND RELIABILITY CONTROL (g)**

Credit 3 hrs. Spring. 3 Lec. Open to qualified undergraduates. Prerequisite, 9370 or the equivalent. Concentrates on the statistical properties and derivation of some quality and reliability control procedures. Topics will include the economic design of Shewhart control charts, cumulative sum control charts, Girshick and Rubin control procedures, moving average control charts, sampling inspection by variables for percent defective, reliability estimation, and reliability growth models. Usually offered in odd numbered years.

**9564. SEQUENTIAL DECISION AND CONTROL PROCESS (g)**

Credit 3 hrs. Fall. 3 Lec. Prerequisite, 9531. Concentration on Markov sequential decision models with general action and state species. A careful study of the underlying probabilistic structure. Finite horizon problems, total expected discounted return, optimal stopping, time average return criteria. Study of the existence and characterization of optimal control strategies.

**9569. SELECTED TOPICS IN APPLIED PROBABILITY (g)**

Credit 3 hrs. Either term. 3 Lec. Prerequisites, 9360 and permission. Selected topics in applied probability for advanced students. Topics will be selected from current literature and from the current research areas of the staff.

**9570. INTERMEDIATE ENGINEERING STATISTICS (g)**

Credit 3 hrs. Spring. 2 Rec., 1 Comp. Open to qualified undergraduates. Prerequisite, 9170 or permission. Application of statistical methods to the efficient design, analysis, and interpretation of industrial and engineering experiments; rational choice of sample size for various statistical decision procedures and the operating characteristic curves of these procedures; curve fitting by least squares; simple, partial, and multiple-correlation analysis.

**9571. DESIGN OF EXPERIMENTS (g)**

Credit 4 hrs. Fall. 2 Rec., 1 Comp. Prerequisite, 9370 or 9570, or permission. Use and analysis of experimental designs such as randomized blocks and Latin squares; analysis of variance and covariance; factorial experiments; statistical problems associated with finding best operating conditions; response-surface analysis.

**9572. STATISTICAL DECISION THEORY (g)**

Credit 3 hrs. Fall. 3 Rec. Prerequisite, 9370 or 9570, or equivalent. The general problem of statistical decision theory and its applications. The comparison of decision rules; Bayes, admissible, and minimax decision rules. Problems involving a sequence of decisions over time, including sequential

analysis. Use of the sample cumulative distribution function, and other non-parametric methods. Applications to problems in the areas of inventory control, sampling inspection, capital investment, and procurement.

#### 9573. STATISTICAL MULTIPLE DECISION PROCEDURES (g)

Credit 3 hrs. Spring. 2 Rec., 1 Comp. Prerequisite, 9571 or permission of the instructor. The study of multiple-decision problems in which a choice must be made among two or more courses of action. Statistical formulations of the problems. Fixed-sample size, two-stage, and sequential procedures. Special emphasis on applications to ranking problems involving choosing the "best" category where goodness is measured in terms of a particular parameter of interest. Recent developments.

#### 9579. SELECTED TOPICS IN INDUSTRIAL STATISTICS (g)

Credit 3 hrs. Either term. 2 Rec., 1 Comp. Prerequisite, 9570 or permission. Selected topics chosen from such fields as nonparametric statistical methods, sequential analysis, multivariate analysis. Offered as required.

#### 9580. DIGITAL SYSTEMS SIMULATION (g)

Credit 4 hrs. Fall. 2 Lect., 1 Rec. Required of professional degree graduate students. Prerequisites, 9381 and 9370, or permission of the instructor. The use of a program for a digital computer to simulate the operating characteristics of a complex system in time. Discussion of problems encountered in construction of a simulation program; synchronization and file maintenance, random number generation, random deviate sampling. Programming in the CLP and SIMSCRIPT languages. Problems in the design of effective investigations using simulation; statistical considerations when sampling from a simulated process.

#### 9582. DATA PROCESSING SYSTEMS (g)

Credit 3 hrs. Fall. 1 Lec., 1 Comp. Prerequisite, 9381 or permission. The design of integrated data processing systems for operational and financial control; questions of system organization, languages and equipment appropriate to this type of application, file structures, addressing and search problems sorting techniques; problems of multiple-remote-input, on-line data processing systems; techniques of system requirement analysis.

#### 9590. SPECIAL INVESTIGATIONS IN INDUSTRIAL ENGINEERING/OPERATIONS RESEARCH (u,g)

Credit and sessions as arranged. Either term. Elective for qualified undergraduate and graduate students. Offered to students individually or in small groups. Study, under direction, of special problems in the field of industrial engineering/operations research. [Register only with the registration officer of the department.]

#### 9591. INDUSTRIAL ENGINEERING AND OPERATIONS RESEARCH GRADUATE SEMINAR (g)

Credit 1 hr. Both terms. A weekly 1½-hr. meeting. Discussion and study of assigned topics of importance in the field.

#### 9598 (FALL TERM), 9599 (SPRING TERM), PROJECT (g)

Variable credit. A normal requirement of 8 credit hrs. must be completed by each candidate for a professional Master's degree, during the last two terms of matriculation. Project work requires the identification, analysis,

and design of feasible solutions to some loosely structured industrial engineering problem. The solutions must be defended on sound engineering and economic arguments. Final bound copies of each project report must be filed with the School.

## MATERIALS SCIENCE AND ENGINEERING

### 6031. STRUCTURE OF MATERIALS (MATERIALS SCIENCE I) (u)

Credit 3 hrs. Fall. 3 Lect.-Rec. Prerequisite, 5211. Elements of crystallography. Projections. Techniques for studying crystal structures. Techniques for studying microstructure. Phase and constitutional diagrams. Morphology of microstructure. Nonequilibrium microstructures. Techniques for studying defect structures. Geometry and energetics of point, line and plane defects. Structures produced by thermal and mechanical treatments. Twin and martensite structures.

### 6032. MECHANICAL PROPERTIES OF MATERIALS (MATERIALS SCIENCE II) (u)

Credit 3 hrs. Spring. 3 Lect. Prerequisites, 6301, 6211. Elastic, plastic, and fracture phenomena in solids, including yielding, strain hardening, brittle fracture, creep and fatigue.

### 6033. STRUCTURE OF MATERIALS LABORATORY I (u)

Credit 2 hrs. Fall. Lab. Experiments designed to demonstrate basic techniques and ideas in crystallography, X-ray diffraction, optical metallography, electron transmission metallography and quantitative metallography.

### 6034. STRUCTURE OF MATERIALS LABORATORY II (u)

Credit 2 hrs. Spring. Lab. Continuation of 6033.

### 6035. THERMODYNAMICS AND FLUID MECHANICS (u)

Credit 3 hrs. Fall. 3 Lect. Introduction to classical thermodynamics, kinetic theory of gases and statistical mechanics. Application to engineering problems.

### 6036. THERMODYNAMICS AND FLUID MECHANICS (u)

Credit 3 hrs. Spring. 3 Lect. Prerequisite, 6035. Applications of thermodynamics and fluid flow concepts to condensed systems, including selected extractive and refining processes. Topics also include phase equilibria, phase diagrams, solutions, surfaces and interfaces and corrosion.

### 6041. KINETICS (MATERIALS SCIENCE III) (u)

Credit 3 hrs. 3 Lect. Prerequisite, 6032. An introduction to the kinetics of atomic transport and transformations in solid materials. Atomistic theory of thermally activated rate processes: diffusion; theory of nucleation in vapor, liquid, and solid phases. Thermally activated and athermal growth during transformations. Applications to phenomena such as recovery, recrystallization and grain growth. Transformations of both the thermally activated and martensite type. Solid state capillary phenomena. Oxidation and corrosion.

### 6042. ELECTRICAL AND MAGNETIC PROPERTIES (MATERIALS SCIENCE IV) (u)

Credit 3 hrs. 3 Lect. Prerequisite, 6041. An introduction to electrical and magnetic properties of materials with emphasis on structural aspects. Classifi-

cation of solids; charge and heat transport in metals and alloys; semiconductors and insulators; principles of operation and fabrication of semiconductor devices; behavior of dielectric and magnetic materials; phenomenological description of super-conducting materials.

#### 6043-6044. SENIOR MATERIALS LABORATORY (u)

Credit 3 hrs. Fall-spring. Experiments are available in the areas of structural studies, properties of materials, deformation and plasticity, mechanical and chemical processing, phase transformations, surface physics, etc. Students are required to complete a limited number of experiments each term.

#### 6045. MATERIALS PROCESSING I (MECHANICAL) (u)

Credit 3 hrs. Fall. 3 Lect. A course relating basic and applied sciences to the processing of materials. The effect of processing on the properties of the materials and control of material properties by variation in processing is emphasized. Processing methods considered include solidification, deformation, heat treatment, material bonding, material removal, consolidation of powders, and others.

#### 6046. MATERIALS PROCESSING II (CHEMICAL) (u)

Credit 3 hrs. Spring. 3 Lect. Recovery and refining of metals. Production of ferrous and nonferrous alloys. Manufacture and utilization of refractories.

#### 6210. MATERIALS SCIENCE (u)

Credit 3 hrs. Fall-spring. 2 Lect.; 1 Lab., 1 Rec. alternate weeks. An introduction to physical chemistry and materials science for engineering students. States of matter and the relation between molecular structure and physical properties. Thermochemistry. Equilibrium in heterogeneous systems. Electrochemical phenomena. Surface chemistry. Reaction rates in gases and condensed systems. Atomic and ionic transport processes.

#### 6211. MATERIALS SCIENCE (u)

Credit 3 hrs. Spring. 2 Lect.; 1 Lab., 1 Rec. alternate weeks. An introduction to materials science for engineering students. Includes basic concepts and their application to selected properties of solids and selected areas of processing of materials. The concepts include bonding of atoms in molecules and crystals, energy bands, ideal and nonideal crystalline and noncrystalline structures, microstructures, equilibrium behavior of materials and kinetic behavior of materials. Plastic deformation, creep, fatigue, ferromagnetism, conductivity in metals, semiconductivity and superconductivity are included. Processing is by solidification, sintering, zone refining, heat treating, and plastic working.

#### 6316. MATERIALS ENGINEERING (u)

Credit 3 hrs. Fall. 2 Lect., 1 Lab. Selection and processing of materials for engineering applications. The effect of processing on the structure and properties of the materials and the control of properties by variations in processing is emphasized. Processing methods considered involve solidification, plastic deformation, heat treatment, material bonding, and consolidation of powders.

#### 6503. MATERIALS SELECTION AND USE (g)

Credit 3 hrs. Fall. 3 Lect. Prerequisite, 6032. Metallurgical and mechanical factors governing the selection of metals for various services. Analysis of

service requirements and the selection and fabrication of metals to fulfill such requirements; analysis of service failures of metals and remedies for such failures; and study of the merits and limitations of materials applications in existing products and equipment.

#### 6552. MATERIALS ENGINEERING (CASE STUDIES) (g)

Credit 3-6 hrs. Spring. Engineering problems which involve mechanical, chemical, electrical, thermal and aerodynamic design specifications are reviewed as examples of materials selection processing, and use. The case study method is used to evaluate designs, investigate service failures, and select suitable materials and processing techniques. Students make engineering analyses and propose materials for specific applications.

#### 6553-6554. PROJECT (g)

Credit 3 hrs. Fall-spring. Research on a specific problem in materials or metallurgical engineering.

#### 6555. MATERIALS PROCESSING (g)

Credit 3 hrs. Spring. 3 Lect. An extension of Engineering 6045, emphasizing recent engineering developments in materials processing.

#### 6560. SPECIAL INVESTIGATIONS IN MATERIALS (g)

Credit and hours as arranged. Either term. Individually supervised laboratory study in one or more special topics of materials.

#### 6612. SELECTED TOPICS IN DIFFRACTION (g)

Credit 3 hrs. Spring. 3 Lect. Prerequisite, 6611. Offered in conjunction with the Department of Engineering Physics (EP 8212). Dynamical diffraction: Ewald-von Laue theory of dynamical diffraction applied to X-rays and electrons. Currently developing theory and application to defects in solids. Phenomena investigated by diffuse scattering. Phonons; measurement of dispersion curves, frequency spectrum, Debye temperatures, vibrational amplitudes. Order-disorder phenomena; short- and long-range order, Guinier-Preston zones. Selected topics of current interest related to X-ray, neutron and electron diffraction, with contributions from other members of the faculty.

#### 6762. PHYSICS OF SOLID SURFACES (g)

Credit 3 hrs. Coordinated with EP 8262 in spring term. 3 Lect. Physical principles describing the behavior of atoms, ions, and electrons at surfaces or in two dimensional structures. Emphasis on applications to phenomena or matter in which the role of surfaces and interfaces is important. Equilibrium thermodynamics and statistical mechanics of interfaces. Atomistic theory of surface forces, surface energy and surface structure. Kinetics of heterogeneous processes including evaporation, condensation, adsorption and chemical reaction. Capillary effects and mechanisms of interfacial phenomena in materials. Presented at the level of review articles such as *Progress in Materials Science* and *Solid State Physics* series.

#### 6872. NUCLEAR MATERIALS (g)

Credit 3 hrs. Spring. 3 Lect. Prerequisites, Materials Science, Physical Chemistry, or equivalent and consent of instructor. Application of materials science to choice and design of systems used in nuclear reactors. Emphasizes effects of radiation, temperature, temperature differences, composition and structure. Brings in preparation, fabrication and use of reactor materials and components.

## Graduate Core Program: Materials Science and Engineering

### 6601. TOPICS IN THERMODYNAMICS AND KINETICS (g)

Credit 3 hrs. Fall. Generalization of thermodynamics to include nonchemical forms of energy. Statistical nature of entropy. Phase stability. Defect equilibria. Thermodynamics of solutions, surfaces and interfaces. Reaction kinetics. At the level of Slater, *Introduction to Chemical Physics*; Guggenheim, *Thermodynamics*.

### 6602. PHASE TRANSFORMATIONS (g)

Credit 3 hrs. Spring. Diffusion. Spinodal decomposition. Nucleation theory. Diffusional growth. Formal theory of nucleation and growth transformations. Diffusionless transformations. Applications of the theory to specific changes in real materials. At the level of Christian, *Phase Transformations*.

### 6603. CRYSTAL MECHANICS (g)

Credit 3 hrs. Fall. Crystal symmetry. Vector field and tensor fields, lattice deformation and fault crystallography. Reversible tensor properties of crystals. Relationships between different tensor properties. Crystal elasticity, elastic waves and polymer elasticity. Lattice dynamics. Thermophysical properties. Irreversible tensor properties. Coupling of transport phenomena. Higher order effects. At the level of Nye, *Physical Properties of Crystals*; Born and Huang; *Dynamical Theory of Crystal Lattices*; and Smith, *Wave Mechanics of Crystalline Solids*.

### 6604. DISLOCATIONS (g)

Credit 3 hrs. Fall. Review of elementary geometrical and strain energy aspects of dislocation theory. Experimental evidence for dislocations. Dislocation elasticity. Energy considerations. Applied stresses. Point defects. Crystallographic aspects of dislocation theory, stacking faults, partials, Thompson tetrahedron and layer structures. Jogs. Strain hardening in single crystals. Mechanical twinning. At the level of Friedel, *Dislocations*.

### 6605. ELECTRICAL AND MAGNETIC PROPERTIES OF ENGINEERING MATERIALS (g)

Credit 3 hrs. Fall. Prerequisite, Physics 454 or consent of instructor. Electrical properties of semiconductors. Metallic alloys. Ferromagnetic materials. Superconductivity. Optical and dielectric properties of insulators and semiconductors. At the level of Kittel, *Introduction to Solid State Physics*; Chikazumi, *Physics of Magnetism*; Lynton, *Superconductivity*; Livingston and Schadler, *The Effect of Metallurgical Variables on Superconductivity Properties*.

### 6606. MECHANICAL BEHAVIOR OF MATERIALS (g)

Credit 3 hrs. Spring. Geometry of slip in single crystals. Strain hardening and recovery. Dislocation dynamical treatment of yield and flow. Interaction of interstitial solute atoms with dislocations. Solution hardening. Two-phase hardening. Time dependent deformation. Ductile and cleavage, fatigue, creep-rupture and stress-corrosion fracture. At the level of review articles in *Progress in Materials Science* and various conference reports.

**6611. PRINCIPLES OF DIFFRACTION**

Credit 3 hrs. Fall. Offered in conjunction with the Department of Engineering Physics (EP 8211). Production of neutrons, X-rays, absorption, scattering, Compton effect. Diffraction from periodic lattices, crystal symmetry, single crystal and powder techniques. Fourier methods, thermal vibrations and scattering, diffraction from liquids and gases, introduction to dynamical diffraction of X-rays and electrons, extinction phenomena and perfect crystals. Selected experiments in diffraction.

**MECHANICAL ENGINEERING**

The courses in mechanical engineering are listed under the following headings: *General, Engineering Design, Materials Processing, and Thermal Engineering.*

**General****3051. A.S.M.E. CORNELL UNIVERSITY SECTION (u)**

Credit 1 hr. Students who are entering the School of Mechanical Engineering are urged to become members of the Cornell University section of the American Society of Mechanical Engineers. The meetings of the Society, however, are open to all. Attendance at any twelve section meetings entitles the members to one hour elective credit; however, only one credit hour may be earned in this manner. Application for membership should be made in September each year at the Office of Mechanical Engineering or to the faculty adviser of the student section.

**3053. MECHANICAL ENGINEERING LABORATORY (u)**

Credit 4 hrs. Fall. 1 Lect., 2 Lab. Prerequisites, 3322, 3622, 3623, and simultaneous registration in 3324 and 3625. Laboratory exercises in instrumentation, techniques, and methods in mechanical engineering. Measurement of pressure, temperature, heat flow, mass transfer, displacement, force, stress, strain, vibrations, noise, etc. Use of electronic instruments and fast-response sensors for steady and transient states. Use of density-sensitive optical systems. Error analysis in experimental determinations.

**3054. DESIGN OF MECHANICAL ENGINEERING SYSTEMS (u)**

Credit 4 hrs. Spring. 2 Lect., 2 Design periods. Prerequisites, 3322, 3324, and 3625. Design experiences in the conception of machines and mechanical engineering systems. The determination of size from thermal or fluid-flow considerations. The conception of configuration from considerations of motion, strength, rigidity, and vibration. Selection of materials and mechanical components, including regard for thermal and corrosive environments. Design considerations for the processing of components, and their assembly. Feasibility studies and preliminary designs by sketches and layouts.

**3055. ADVANCED MECHANICAL ENGINEERING DESIGN (g)**

Credit 3 hrs. Spring. 1 Lect., 2 Design periods. Prerequisite, 3054 or equivalent. Design of engineering systems, components and equipment in the widest sense, requiring the integration of engineering disciplines at an advanced level.

**3090. MECHANICAL ENGINEERING DESIGN PROJECT (g)**

Credit 3 hrs. Spring. Intended for students in the M.Eng. (Mech) program. Design of an engineering system or a device of advanced nature. Projects to be carried out by individual students or by small groups with individual assignments culminating in an engineering report by each student. In most cases, the project is performed in collaboration with an industrial company or institution, whose representatives suggest practical problems and review the final designs.

## Engineering Design

See also Courses 3054, 3055, 3090 under GENERAL above.

**[3116. INTRODUCTION TO INDUSTRIAL DESIGN (u)]**

Credit 3 hrs. Fall. 2 Lab. Prerequisite, permission. Readings; abstract and applied design problems which investigate and apply the interrelationships existing between form, function, and materials. Not offered in 1967-68.

**3321. KINEMATICS AND DYNAMICS OF MECHANISMS (u)**

Credit 3 hrs. Fall. 2 Rec., 1 Comp. Prerequisite, 212. Analysis of displacement, velocity, and acceleration in basic mechanisms for control, transmission, and conversion of motion and force. Cams, gears, and four-bar linkages. Forces associated with accelerated motion and gyroscopic action. The flywheel as a speed control device. Counter-balancing. (Evening preliminary examinations)

**3322. ANALYSIS AND DESIGN OF MACHINE COMPONENTS (u)**

Credit 3 hrs. Spring. 2 Rec., 1 Design period. Prerequisites, 3321, 6316, and 3431. A study of some major components of mechanical equipment such as clutches, brakes, gears, shafts, and bearings, with particular attention to performance characteristics, strength and durability, optimum proportions, and choice of materials. Stress-concentration, fatigue, and residual stresses. Curved beams, pressure vessels, and rotors. (Evening preliminary examinations)

**3324. VIBRATION AND CONTROL OF MECHANICAL SYSTEMS (u)**

Credit 3 hrs. Fall. 2 Rec., 1 Lab. Prerequisite, 3321. Free, damped, and forced vibrations. Vibration isolation mounts, absorbers, and dampers. Control systems: the Laplace transform, transient response to specific inputs, transfer functions, frequency response, stability. Analog computer solutions. Laboratory on the vibration of machines and their components, and on hydraulic and electromechanical control circuits. Modern instruments for measuring force and motion.

**3331. KINEMATICS AND COMPONENTS OF MACHINES (u)**

Credit 3 hrs. Spring. 2 Lect.-Rec., 1 Comp. Prerequisite, 212, or equivalent. May be elected by qualified students not in mechanical engineering. Theory and analysis of mechanisms and components based upon consideration of motion, velocity, acceleration, material, strength, and durability. Cams, linkages, couplings, clutches, brakes, belts, chains, gears, bearings, shafts, and springs.

**3361. ADVANCED MECHANICAL ANALYSIS (g)**

Credit 3 hrs. Fall. 3 Rec. Open to qualified seniors. Prerequisite, 3322 or 3331. Theory of film-lubricated bearings; advanced analysis of special friction

devices; theories of failure and design equations; prestressing; impact; thermal stresses and creep; selected topics from advanced strength of materials such as built-up cylinders, rotors, plates, shells, beams on elastic foundations, etc.

### 3362. MECHANICAL DESIGN OF TURBOMACHINERY (g)

Credit 3 hrs. Spring. 3 Rec. Prerequisites, 3361 and 3324. Mechanical design of major components of high speed compressors and turbines for structural adequacy and vibration-free operation. Selected topics from among the following: design of rotor components: disks, vanes, blades, shafts, and connections. Design of bearings, seals, gaskets, expansion members. Investigation of natural frequencies and critical speeds. Selection of material.

### 3364. DESIGN FOR MANUFACTURE (u)

Credit 3 hrs. Fall. 2 Rec., 1 Design or Lab period. Prerequisites, 3322 or 3331, and 3431 or equivalent, or permission of the instructor. Principles and methods of design to improve the producibility of machines and products. Design techniques to simplify and improve the processing operations, to reduce cost, and to increase accuracy and reliability. Designs and operation sequences for small-lot and large-lot manufacture to exploit the capabilities inherent in machine tools, jigs and fixtures, and other production equipment. Applications of the foregoing by design exercises.

### 3366. ADVANCED KINEMATICS (u)

Credit 3 hrs. Fall. 2 Rec., 1 Comp. Prerequisite, 3321. Advanced analytical and graphical determination of velocities and accelerations in mechanisms. Special geometrical concepts on the kinematics of mechanisms. Synthesis of linkages by graphical and analytical methods. Design of linkages to give prescribed paths, positions, velocities, and accelerations.

### 3368. MECHANICAL VIBRATIONS (g)

Credit 3 hrs. Spring. 2 Rec., 1 Lab. Open to qualified undergraduates. Prerequisite, 3324 or equivalent. Further development of vibration phenomena in single- and multi-degree of freedom linear and nonlinear systems, with emphasis on engineering problems involving analysis and design. Also gyroscopic effects, branched systems, random vibrations, impact and transient phenomena, isolation of shock and vibration, and noise and its reduction. Impedance, matrix, and numerical methods. Analog and digital computer solutions and laboratory studies.

### 3372. EXPERIMENTAL METHODS IN MACHINE DESIGN (g)

Credit 3 hrs. Fall. 1 Rec., 2 Lab. Prerequisite, 3322 or 3331. Open to qualified undergraduates. Investigation and evaluation of methods used to obtain design and performance data. Techniques of photoelasticity, strain measurement, photography, vibration and sound measurements, and development techniques are studied as applied to machine design problems.

### 3374. CONCEPTUAL DESIGN (g)

Credit 3 hrs. Fall. 3 Rec. Prerequisite, 3322 or equivalent. Open to qualified undergraduates. Conception and initial design of products and machines. Methods to stimulate mechanical ingenuity and improve appearance. Principles of synthesis and creativity employing association, inversion, and other techniques. Sketching, class discussion, and comparative evaluation of solutions.

## 150 COURSES — MECHANICAL ENGINEERING

### 3375. AUTOMATIC MACHINERY (u)

Credit 3 hrs. Spring. 2 Rec., 1 Field trip. Prerequisite, 3321. A study of automatic and semiautomatic machinery such as dairy, canning, wire-forming, textile, machine-tool, computing, and printing equipment.

### 3377. AUTOMOTIVE ENGINEERING (u)

Credit 3 hrs. Spring. 3 Rec. Prerequisite, 3322. Analysis of various designs for the parts of an automotive vehicle, other than the engine, in relation to its performance; stability, weight distribution, traction, steering, driving, braking, riding comfort, power required and available, transmission types, acceleration, and climbing ability. Recommended together with Course 3670 for a study of automotive engineering.

### 3378. AUTOMOTIVE CONTROL SYSTEMS (g)

Credit 3 hrs. Spring. 2 Rec., 1 Lab. Open to qualified seniors. Prerequisite, 3324 or equivalent. Further development of feedback control theory, including stability criteria, frequency response, and transfer functions, with emphasis on engineering problems involving the analysis of existing control systems and the design of systems to perform specified tasks. Also, nonlinear systems, describing functions, sampled-data systems, and compensation techniques. Analog computer simulation and laboratory studies of hydraulic, pneumatic, and electromechanical components and systems.

### 3380-3381. DESIGN OF COMPLEX SYSTEMS (g)

Credit 3 hrs. Fall and spring. Two meetings of 2 hours per week to be arranged. Permission of professor in charge. A seminar course relying heavily on student participation in discussing frontier problems such as systems for space and underwater exploitation, salt water conversion, and transportation. Determination of specifications for these systems to meet given needs. Critical discussion of possible solutions based on technical as well as economic and social considerations. Reports will be required containing recommendations and reasoning leading to these considerations.

### [3382. HYDRODYNAMIC LUBRICATION (g)]

Credit 3 hrs. 3 Rec. Designed to acquaint those having a general knowledge of solid and fluid mechanics with the special problems and literature currently of interest in various fields of hydrodynamic lubrication. General topics include equations of viscous flow in thin films, self-acting and externally pressurized bearings with liquid and gas lubricant films, bearing system dynamics, digital and analog computer solutions. Also selected special topics in elasto-hydrodynamic, thermo-hydrodynamic, and magneto-hydrodynamic lubrication. Not offered in 1967-68.

### 3390. SPECIAL INVESTIGATIONS IN MACHINE DESIGN (u)

Permission of department head required. Credit arranged. Either term. Individual work or work in small groups under guidance in the design and development of a complete machine, in the analysis of experimental investigation of a machine or component of a machine, or studies in a special field of machine design.

### 3392. SPECIAL TOPICS IN ENGINEERING DESIGN (u)

Credit 1 hr. or more. Either term. 10-15 lecture periods per term on a topic of special interest not requiring a course of standard length. Series of

lectures by staff members or visiting staff on subjects of current interest; topics announced prior to beginning of term. Hours to be arranged to suit. More than one topic may be taken if offered. Department to be consulted before registration.

## Materials Processing

### 3420. ELEMENTS OF MATERIALS PROCESSING (u)

Credit as arranged. Either term. Elective for students not in mechanical engineering. Practical work in the laboratory with conventional machine shop and measuring equipment and techniques. Thread and gear processing. Commercial forms of materials, practices in fits, finishes, and the like. Machining characteristics of ferrous, nonferrous, and nonmetallic materials.

### 3431. MATERIALS PROCESSING (u)

Credit 3 hrs. Both terms. 1 Lect., 2 Lab. Comprehensive studies of materials and machinery involved in material removal. Force, deformation, and power relationships. Single, multiple, and multi-tooth tool capabilities. Ultrasonic, electrical discharge, electro-chemical, and other "nonchip" removal processes. Process planning. Thread and gear manufacturing. Metrology, fixed and comparative systems of gaging. Surface texture determination. Quality control systems.

### 3451. MATERIAL REMOVAL SYSTEMS (u,g)

Credit 3 hrs. Fall. 1 Lect., 2 Lab. Prerequisites, 3431, 6316. Advanced study of mechanics of chip formation. Forces and power dynamometry. Orthogonal and three-dimensional relationships. Cutter geometry and chip control. Non-chip techniques using chemical, electrical, ultrasonic, and other media; surface characteristics; and post-process treatments.

### 3461. QUALITY ASSURANCE SYSTEMS (u)

Credit 3 hrs. Either term. 2 Lect., 1 Lab. Prerequisites, 3431, 9170. Theory and computational techniques for control by attributes or variables. Machine tool capability studies, instrumentation systems. Standards codes and applications. Equipment performance characteristics. Fixed and comparative gaging systems; noncontract, reflective, and radiation principles. Surface texture phenomena. True-position tolerancing and charting.

### 3475. NUMERICAL CONTROL OF PROCESSES (u,g)

Credit 3 hrs. Spring. 2 Lect., 1 Lab-Comp. Prerequisite, 3431. A thorough study of concepts, systems, and component designs for flexible-programmed processing. Machine tools as related to numerical control. Machine command-response factors, stick-slip, resonance, shaft windup, mass-inertia and other effects. Positioning control systems and coding. Manual and computer programming. Simulation studies.

### 3490. SPECIAL INVESTIGATIONS IN MATERIALS PROCESSING (u)

Credit and hours as arranged. Discussion and study of selected topics on theory of metal cutting and working processes, the technology of manufacture with machine tools, and metrology and production gaging; topics and assigned study to suit individual needs.

## Thermal Engineering

### 3621. INTRODUCTION TO THERMODYNAMICS (u)

Credit 3 hrs. Fall. 3 Rec. Prerequisites, Mathematics 294, Physics 224. The definitions, concepts, and laws of classical thermodynamics. Applications to homogeneous systems and control volumes. Potential function, maximum work, availability, and irreversibility. Maxwell's relations and general thermodynamics functions. Entropy and thermodynamic probability. Ideal gases, gas processes, and variable specific heats.

### 3622. ENGINEERING THERMODYNAMICS (u)

Credit 2 hrs. Spring. 2 Rec. Prerequisite, 3621 or equivalent. Thermodynamic properties of multiphase pure substances and real gases. Nonreactive mixtures, reactive systems, combustion. Chemical equilibrium and chemical potential; applications to combustion. Heat engine and heat pump cycles. Introduction to irreversible thermodynamics; applications.

### 3623. FLUID MECHANICS (u)

Credit 4 hrs. Spring. 4 Rec. Prerequisites, Mechanics 212, 3621. Properties of fluids, fluid statics; kinematics of flow, stream function, velocity potential, elements of hydrodynamics; dynamics of flow, momentum and energy relations, Euler equations, wave motion; thermodynamics of flow, stagnation values, Mach number relationships; dimensional analysis; real fluid phenomena, laminar and turbulent motion; flow in ducts, universal velocity distribution; compressible flow with area change, friction and heating, normal shock; flow over immersed bodies, laminar and turbulent layer, exact and momentum solutions; lift and drag; elements of two-dimensional compressible flow, expansion waves, oblique shock.

### 3625. HEAT TRANSFER (u)

Credit 3 hrs. Fall. 1 Lect., 2 Rec. Prerequisites, 3622, 3623. Conduction of heat in the steady state, unsteady state and periodic heat flow; analogic methods; numerical methods; systems with heat sources. Convection: boundary layer fundamentals; natural convection; forced convection inside tubes and ducts; forced convection over various surfaces. Boiling and condensation. Radiation: emission, absorption, reflection, transmission, and exchanges. Radiation combined with conduction and convection. Heat exchanges: overall heat transfer coefficients; mean temperature difference; effectiveness; design.

### 3626. THERMAL SYSTEMS ENGINEERING (u)

Credit 4 hrs. Spring. 2 Lect., 1 Lab. Prerequisites, 3622, 3623, 3053, 3625. Applications of thermodynamics, fluid mechanics, and heat transfer to complete thermal systems rather than to processes. Work-producing, heat-producing, heat-pumping, propulsion, and environmental control systems. Classification, criteria of performance, and economic considerations. Steam power plants, combustion engines, refrigerating systems, air conditioning systems, fuel cells, thermo-electric cooling and power generation.

### 3631. THERMODYNAMICS (u)

Credit 3 hrs. Fall. 2 Lect., 1 Rec. Prerequisites, Mathematics 294, Physics 224. Not open to students in mechanical engineering. The definitions, laws, and concepts of classical thermodynamics. Applications to homogeneous systems and control volumes. Availability, equilibrium, and chemical thermodynamics. An introduction to microscopic descriptions, thermodynamic probability, and statistical mechanics.

**3632. FLUID MECHANICS (u)**

Credit 3 hrs. Spring. 2 Lect., 1 Rec. Prerequisite, 3631. Not open to students in mechanical engineering. Course emphasis is on the dynamics of real fluids and approaches to be used in solving these problems. Treatment includes the finite control volume, differential equations of motion, and dynamic similitude. Applications are to problems of incompressible and compressible fluid flow, both inviscid and viscous.

**3651. ADVANCED THERMAL SCIENCE (g)**

Credit 3 hrs. Fall. 3 Rec. Prerequisites, 3622, 3623, 3625, or equivalent. Intended for graduate students in the M.Eng. (Mech) program. Advanced level study of topics from thermodynamics, fluid mechanics, and heat transfer. Selection of subjects from irreversible thermodynamics, statistical mechanics, real gas behavior, chemical thermodynamics, unsteady flow phenomena, gas dynamics, turbulent flow of jets and wakes, compressible boundary layer, numerical methods, and variable transport properties.

**3652. COMBUSTION THEORY (g)**

Credit 3 hrs. Spring. 3 Lect. Prerequisite, 3625. Open to qualified undergraduates. Application of the basic equations of fluid flow and heat and mass transfer to homogeneous and diffusion flames. Ignition, quenching, rate processes, and dissociation effects will be examined. Consideration will be given to flame stabilization and practical systems.

**3653. REFRIGERATION (u)**

Credit 3 hrs. Fall. 3 Rec. Prerequisite, 3625 or 3625 concurrently. Introduction to refrigeration with emphasis on application of thermodynamics, fluid dynamics and heat transfer. Cycle and component performance. Applications in air conditioning and cold storage. Overall performance under varied operating conditions. Cryogenic refrigeration; gas liquefaction, purification, storage, and special heat transfer problems. Thermoelectric cooling.

**3654. AIR CONDITIONING (u)**

Credit 3 hrs. Spring. 3 Rec. Prerequisite, 3625 or 3625 concurrently. Introduction to air conditioning with emphasis on application of thermodynamics, fluid dynamics, mass transfer and heat transfer. Psychrometrics, air conditioning processes and cycles. Heat transmission in buildings; solar effects; lumped thermal circuit methods. Heat pumps. Air distribution. Component and system performance.

**3661. ADVANCED THERMODYNAMICS (g)**

Credit 3 hrs. Fall. 3 Lect. Open to qualified undergraduates. Prerequisites, 3621, 3622, or equivalent. A rigorous and general treatment of classical thermodynamics with emphasis on mathematical developments and philosophical interpretations. The several statements of the concepts and laws of thermodynamics and equivalence proofs, the pure substance, homogeneous and heterogeneous systems. Potential functions and Maxwell's relations, availability, irreversibility, and equilibrium. Entropy flow, entropy production, and irreversible thermodynamics. The relationship between classical thermodynamics, classical statistics, quantum statistics, and information theory.

**3663. TURBOMACHINERY (u)**

Credit 3 hrs. Fall. 3 Rec. Prerequisites, 3622, 3623, or permission of instructor. Aerothermodynamic design of turbomachines in general, followed by consideration of specific types; fans, compressors, and pumps; steam, gas, and

hydraulic turbines. Energy transfer between a fluid and a rotor; flow in channels and over blades. Compressible flow, three-dimensional effects, surging and cavitation. Outline design of a high-performance compressor-turbine unit. Attention is drawn to 3362 as a companion course for mechanical design.

### 3664. INTERMEDIATE FLUID MECHANICS (u)

Credit 3 hrs. Spring. 3 Rec. Prerequisite, 3623. Integrated development of equations of mass, motion, and energy for fluid particles and control volumes. Applications of these governing relations to various selected areas such as hydrodynamics and conformal transformations in ideal flows; laminar and turbulent flows; boundary layers with energy transfer; two-dimensional compressible flows; variable property flows; unsteady one-dimensional flows; other topics of current interest.

### 3665. TRANSPORT PROCESSES (u,g)

Credit 3 hrs. Fall. 3 Rec. Prerequisites, basic thermodynamics and fluid mechanics. Description of basic microscopic modes of thermal and mass diffusion. Molecular transport mechanics in gases. Formulation of the transport equations and their application to engineering problems. Conduction and mass diffusion in solids, boundary value problems. Thermal radiation between opaque surfaces in vacuum and as a diffusion process in nonopaque media. Mass and energy diffusion by molecular and by eddy processes in convection. Analytical methods in convection investigated, limits shown, and the role of correlations discussed. Analogous phenomena. Combined mode heat transfer.

### 3667. TECHNIQUES OF THERMAL MEASUREMENT (g)

Credit 3 hrs. Spring. 2 Lect., 1 Lab. Open to qualified undergraduates. Prerequisite, 3625. Theory, construction, calibration, and application of liquid-in-glass thermometers, solid expansion thermometers, pressure-spring thermometers, resistance thermometers, thermoelectric thermometers, optical pyrometers, radiation pyrometers, enthalpy probes, heat flux probes.

### 3669. COMBUSTION ENGINES (u)

Credit 3 hrs. Fall. 3 Rec. Prerequisites, 3622, 3623, 3625. Introduction to combustion engines with emphasis on application of thermodynamics, fluid dynamics, and heat transfer; reciprocating combustion engines; gas turbines; compound engines; reaction engines.

### 3670. ADVANCED COMBUSTION ENGINES (u)

Credit 3 hrs. Spring. 3 Rec. Prerequisite, 3669 or equivalent. Advanced study of topics in field of reciprocating engines, both spark-ignition and diesel. Methods of thermodynamic analysis and performance prediction for free-piston power plants and supercharged engines. Relation of engine performance characteristics and performance characteristics of automotive vehicles. Recommended together with Course 3377 for study in automotive engineering.

### 3671. AEROSPACE PROPULSION SYSTEMS (u,g)

Credit 3 hrs. Spring. 3 Rec. Prerequisites, 3622, 3623, or permission of instructor. Application of thermodynamics and fluid mechanics to the design and performance of thermal-jet and rocket engines in the atmosphere and in space. Mission analysis in space as it affects the propulsion system. Consideration of auxiliary power supply; study of advanced methods of space propulsion.

**3672. ENERGY CONVERSION (g)**

Credit 3 hrs. Spring. 3 Lect. Open to qualified undergraduates. Prerequisite, 3622 or equivalent. Primarily an analysis of energy conversion devices from a classification into heat engines, chemical engines, and expansion engines. An analysis of each class from the point of view of efficiency and other criteria of performance. A more detailed study of some conventional and some direct energy conversion devices including thermoelectric, thermionic, and photovoltaic converters; and fuel cells. Energy sources and energy storage, application to terrestrial and space power systems.

**3673. ADVANCED FLOW MEASUREMENT (g)**

Credit 3 hrs. Fall. 2 Lect., 1 Lab. Open to qualified fifth year students. Theory and operation of instruments used in fluid flow investigations; hot wire anemometers; density-sensitive optical systems, transient temperature and pressure measurements; measurements in reacting systems; error analysis and treatment of data.

**3674. STATISTICAL THERMODYNAMICS (g)**

Credit 3 hrs. Fall. 3 Rec. Prerequisites, 3622, 3623, or equivalent. Kinetic theory of state and transport properties of gases. Statistical mechanics and thermodynamic probability. Multi-component systems in equilibrium, and introduction to nonequilibrium flows.

**3680. ADVANCED CONVECTION HEAT TRANSFER (g)**

Credit 3 hrs. Spring. 3 Rec. Prerequisite, 3665 or consent of instructor. Processes of transport of thermal energy, momentum, and mass in fluids are considered in detail. Theories of transfer processes and analytic solutions. Analytical and experimental results compared. Transport equations for a fluid, delineation of kinds of processes, differential similarity, natural convection, forced convection at low and high velocities. Boundary layer solutions, similarity theories, and effects of turbulence. Transport in rarefied gases.

**3681. RADIATIVE TRANSFER (g)**

Credit 3 hrs. Fall. 3 Rec. Prerequisite, 3665 or consent of instructor. Theory of radiative transfer of heat. Absorption and scattering; differential approximation; surface interactions. Application to atmospheres, steady and transient slab problems; effects on shock and sound wave structure, and hypersonic flow problems. Some assignments to review current literature.

**3682. SEMINAR IN HEAT TRANSFER (g)**

Credit 3 hrs. Spring. Two meetings of 2 hours per week to be arranged. Prerequisite, permission of professor in charge. Discussion of fields of active inquiry and current interest in heat transfer. Considerations of major recent work and several summaries of associated contributions.

**3683. VISCOUS FLOW THEORY (g)**

Credit 3 hrs. Fall. 3 Rec. Prerequisite, 3664 or permission of instructor. Intended for graduate students. Stress and rates of deformation tensors, derivation of the Navier-Stokes equations. Exact solutions, very slow motion, boundary layers, Tollmien-Schlichting and Taylor instability, turbulence.

**3690. SPECIAL INVESTIGATIONS IN THERMAL ENGINEERING (u)**

Credit by arrangement. Fall-spring. Intended either for informal instruction to a small number of students interested in work to supplement that given in regular courses or for a student to pursue a particular investigation outside of regular courses. Permission of the department required for registration.

## NUCLEAR SCIENCE AND ENGINEERING

(For descriptions of courses see the section "Engineering Physics.")

## THEORETICAL AND APPLIED MECHANICS

### 211. MECHANICS OF RIGID AND DEFORMABLE BODIES I (u)

Credit 4 hrs. Fall-spring. 1 Lect., 2 Rec., 1 Comp.-Lab. Co-registration in Mathematics 293 and Physics 223. Force systems and equilibrium. Distributed forces, static friction, statically determinate plane structures. Concepts of stress and strain. Shearing force, bending moment, bending and torsion of beams. Analysis of plane stress and strain, combined stress, thermal stress. Theories of failure. Instability of columns. (Evening prelims.)

### 212. MECHANICS OF RIGID AND DEFORMABLE BODIES II (u)

Credit 4 hrs. Spring. 1 Lect., 2 Rec., 1 Comp.-Lab. Prerequisite, 211. Inelastic behavior. Energy methods in mechanics. Principles of particle dynamics. Theory of oscillations. Kinematics of rigid body motion. Dynamics of systems of particles. Kinetics of rigid bodies. (Evening prelims.)

### 900. BIONICS AND ROBOTS (u,g)

Credit 3 hrs. Spring. 3 Rec. Prerequisite, Mathematics 293-294 or equivalent. Engineering applications of strategies and tactics of biological systems. Machines that learn. Artificial intelligence. Cybernetics, information and adaptive control. Reliable systems from unreliable components. Self-organizing systems. Neural nets, perceptrons, threshold logic units, madelines. Pattern recognition and recall. Brain models. Features in patterns. Machine translation. Heuristic programming. Automata, pure and applied. Robots, hardware and software. Self-reproducing and self-repairing machines, their embryology, development, and evolution. Context-free languages, Turing machines and computability. Gödel's theorem.

### 1150. ADVANCED ENGINEERING ANALYSIS I (u)

Credit 3 hrs. Fall. Prerequisite, Mathematics 294 or equivalent. A course including mathematical methods in applied science with emphasis on applications of importance in engineering. Mathematical topics include ordinary differential equations, Fourier series and partial differential equations. Applications to heat flow, reaction rates, diffusion, wave propagation, dynamic response. Use of the digital computer is included.

### 1151. ADVANCED ENGINEERING ANALYSIS II (u)

Credit 3 hrs. Spring. Prerequisite, 1150 or equivalent. A continuation of 1150 including partial differential equations and boundary value problems, vector fields, complex variables, Laplace transformations. Applications to heat flow and diffusion, fluid flow, electrodynamics. Use of the digital computer is included.

### 1159. EXPERIMENTAL MECHANICS (u,g)

Credit 3 hrs. Fall. 1 Rec., 2 Lab. Brittle coating method of experimental stress analysis. Electrical resistance type strain gages, including factors influencing alloy sensitivity, gage construction, gage factors, stress gages. Instrumentation for static and dynamic strain gage work including a brief coverage of amplifiers, galvanometers, recorders, and oscilloscopes. Photoelastic methods of stress analysis, photostress.

**1160. CONTINUUM MECHANICS (u,g)**

Credit 3 hrs. Fall. 3 Lect. A unified approach to the theory of continuous media based on thermodynamic and invariant principles. Kinematics of the continuum, stress hypothesis, uniqueness, constitutive equations. Special topics and examples from finite elasticity theory, the Navier-Stokes fluid and plasticity.

**1162. VIBRATION OF ELASTIC SYSTEMS (u,g)**

Credit 4 hrs. Spring. 3 Lect., 1 Lab. Review of vibration of linear lumped system with emphasis on matrix method and transient phenomena. Free and forced vibration of continuous systems, including strings, rods, beams, membranes and plates. Waves in rods and beams. Orthogonality conditions and application of generalized functions. Rayleigh-Ritz method. Mathieu function and dynamic instability of strings, columns and other elastic systems. Nonlinear phenomena.

**1163. APPLIED ELASTICITY (u,g)**

Credit 3 hrs. Fall. 3 Lect. Analysis of thin curved bars. Plane stress and plane strain in the circular cylinder, effects of pressure, rotation, and thermal stress. Small and large deflection theory of plates, classical and approximate methods. Strain energy methods. Symmetrically loaded thin cylindrical shell. Torsion of thin-walled membranes. A first course in the mechanics of elastic deformable bodies with structural applications. Offered in alternate years beginning 1967-68.

**1164. THEORY OF ELASTICITY I (u,g)**

Credit 3 hrs. Spring. 3 Lect. General analysis of stress and strain. Plane stress and strain. Airy's stress function solutions using Fourier series, Fourier integral, and approximate methods. St. Venant and Michell torsion theory. Simple three-dimensional solutions. Bending of prismatical bars. Axially loaded circular cylinder and half space. Offered in alternate years beginning 1967-68.

**[1165. THEORY OF ELASTICITY II (g)]**

Credit 3 hrs. Spring. 3 Lect. Development in tensor form of the basic equations of large deformation elasticity; solution of certain large deformation problems. Linearization to infinitesimal elasticity. Boussinesq-Papkovich potentials and their application to three-dimensional problems; contact problems; plane stress by method of Muskhelishvili; application of conformal mapping; Cauchy integral techniques in elasticity; torsion problems. Not offered 1967-68.

**1166. STRESS WAVES IN SOLIDS (g)**

Credit 3 hrs. Spring. 3 Lect. Prerequisites, 1162, 1163, or equivalent. General equations of elastodynamics. Waves in extended elastic media. Reflection and refraction of waves. Surface waves and waves in layered media. Vibrations and waves in strings, rods, beams and plates. Dispersion in mechanical waveguides. Transient loads. Scattering of elastic waves and dynamical stress concentration. Waves in anisotropic media and visco-elastic media. Offered in alternate years beginning 1967-68.

**[1167. STABILITY THEORY OF PLATES AND SHELLS (u,g)]**

Credit 3 hrs. Spring. 3 Lect. General formulation of equations and criteria for static and dynamic stability of plates and shells. Energy methods. Con-

## 158 COURSES — THEORETICAL & APPLIED MECHANICS

servative and nonconservative loading. Membrane and bending stresses and displacements. Applications to the buckling of plate and shell-type structures. Not offered 1967-68.

### [1168. THEORY OF PLASTICITY (u,g)]

Credit 3 hrs. Spring. 3 Lect. Theory of inelastic behavior of materials. Plastic stress-strain laws, yield criteria and flow laws. Flexure and torsion of bars, thick-walled cylinders, metal forming and cutting, stress analysis in metals and soils. Yield hinges. Limit analysis. Shakedown of simple statically indeterminate members. Not offered 1967-68. Offered in alternate years beginning 1968-69.

### 1170. ADVANCED DYNAMICS (u,g)

Credit 3 hrs. Fall. 3 Lect. Newton's equations of motion for a system of masses, their solution, momentum, energy. Systems with variable mass, rocket equations. Variational principles of mechanics, d'Alembert's principle, Lagrange's equations, Hamilton's equations. Stability of motion, Liapunov's method. Rigid body motion, Euler's equations, tops, gyroscopes. Theory of small oscillations.

### 1172. SPACE FLIGHT MECHANICS (g)

Credit 3 hrs. Spring. 3 Lect. Three-body problem; regularization; Jacobi integral; restricted three-body problem; Hill curves; libration points and stability; motion in cislunar space; interplanetary trajectories; space navigation; limiting problems in space travel; theory of optimal trajectories; Pontryagin maximum principles; rendezvous problems.

### 1180. METHODS OF APPLIED MATHEMATICS I (u,g)

Credit 3 hrs. Fall. 3 Lect. Prerequisite, one-semester course in ordinary and partial differential equations. Ordinary differential equations; series; orthogonal functions and Sturm-Liouville theory; Green's function; Fourier and Laplace transforms; functions of several real variables; vector analysis; matrices; partial differential equations; with application to engineering problems.

### 1181. METHODS OF APPLIED MATHEMATICS II (u,g)

Credit 3 hrs. Spring. 3 Lect. Prerequisite, 1180. Continuation, from 1180, of partial differential equations; complex variable; tensor analysis; calculus of variations; with application to engineering problems.

### 1182. METHODS OF APPLIED MATHEMATICS III (u,g)

Credit 3 hrs. Fall. 3 Lect. Prerequisite, 1181 or equivalent. Application of advanced mathematical techniques to engineering problems. Conformal mapping; complex integral calculus; Green's function; integral transforms; asymptotics including steepest descent and stationary phase; Wiener-Hopf technique; general theory of characteristics; perturbation methods; singular perturbations including PLK method and boundary layers. Development will be in terms of problems drawn from vibrations and acoustics, fluid mechanics and elasticity, heat transfer, electromagnetics.

### 1183. METHODS OF APPLIED MATHEMATICS IV (u,g)

Credit 3 hrs. Spring. 3 Lect. Prerequisite, 1182 or equivalent. More extensive treatment of 1182 in same spirit. Topics include: method of matched asymptotic expansions, W.K.B. approximation; Hilbert-Schmidt and Fredholm

theories of integral equations; singular integral equations. Wiener-Hopf equations with application to finite interval, Carleman equation and its generalization, effective approximations; further methods in partial differential equations, slot problems.

#### 1184. NUMERICAL METHODS IN ENGINEERING (u,g)

Credit 4 hrs. Spring. Prerequisite, 1181 or equivalent. Methods for obtaining numerical solutions to problems arising in engineering and for evaluating analytical solutions numerically. Accelerating convergence of series solutions; continued fractions, quotient-difference algorithms. Solution of initial-value and boundary-value problems for ordinary differential equations. Quadrature; solution of integral equations. Direct and iterative methods for solving algebraic equations and systems of equations. Eigenvalue problems. Partial differential equations; finite-difference methods, method of characteristics, integral methods.

#### 1196. RESEARCH IN THEORETICAL AND APPLIED MECHANICS (g)

Credit as arranged. Thesis or independent research in a field of theoretical and applied mechanics. Such research must be under the guidance of a staff member.

#### 1197. SELECTED TOPICS IN THEORETICAL AND APPLIED MECHANICS (g)

Credit is arranged, any term. Qualified students wishing to do work in any field of theoretical and applied mechanics should register for this course after consultation with the department. Students work with appropriate members of the staff in the chosen field. Typical areas of work include theory of elastic stability, theory of plates and shells, rocket theory and design, wave propagation, elasticity, vibrations, and experimental mechanics.

## UNIVERSITY ADMINISTRATION

James A. Perkins, President of the University.  
Dale R. Corson, University Provost.  
Mark Barlow, Jr., Vice President for Student Affairs.  
John E. Burton, Vice President - Business.  
Lewis H. Durland, University Treasurer.  
W. Keith Kennedy, Vice Provost.  
Franklin A. Long, Vice President for Research and Advanced Studies.  
E. Hugh Luckey, Vice President for Medical Affairs.  
Thomas W. Mackesey, Vice President for Planning.  
Paul L. McKeegan, Director of the Budget.  
Robert D. Miller, Dean of the University Faculty.  
Steven Muller, Vice President for Public Affairs.  
Arthur H. Peterson, University Controller.  
Robert L. Sproull, Vice President for Academic Affairs.  
Neal R. Stamp, Secretary of the Corporation, and University Counsel.

## FACULTY AND STAFF OF THE COLLEGE OF ENGINEERING

Andrew Schultz, Jr., B.S., Ph.D., Dean of the College of Engineering; Professor of Industrial Engineering and Operations Research.  
William H. Erickson, B.S., M.S., Associate Dean of the College of Engineering; Professor of Electrical Engineering.  
John F. McManus, C.E., Assistant Dean of the College of Engineering; Professor of Theoretical and Applied Mechanics.  
Edmund T. Cranch, B.M.E., Ph.D., Associate Dean of the College of Engineering.  
Howard G. Smith, E.E., M.E.E., Ph.D., Director of the Division of Basic Studies; Professor of Electrical Engineering.  
Julian C. Smith, B.Chem., Chem.E., Director of Continuing Education; Professor of Chemical Engineering.  
Donald F. Berth, B.S.Ch.E., M.S.Ch.E., Director of College Relations; Lecturer in Engineering.  
Donald G. Dickason, A.B., Director of Engineering Admissions and Student Personnel.  
Jeanette Wood, B.S., Librarian, College of Engineering Library.

## EMERITUS PROFESSORS

Thomas J. Baird, B.Arch., M.R.P., Professor of Machine Design, Emeritus.  
Lawrence Adams Burckmyer, Jr., B.S., E.E., Professor of Electrical Engineering, Emeritus.  
Roy Edwards Clark, M.E., Professor of Heat-Power Engineering, Emeritus.  
Walter L. Conwell, C.E., Professor of Highway Engineering, Emeritus.  
Walter Wendall Cotner, B.S., E.E., M.E.E., Professor of Electrical Engineering, Emeritus.

- Casper Lehman Cottrell, A.B., Ph.D., Professor of Electrical Engineering, Emeritus.
- Carl Crandall, C.E., Professor of Civil Engineering, Emeritus.
- Frederick Seward Erdman, B.S., B.S. in M.E., M.M.E., Ph.D., P.E., Professor of Mechanical Engineering, Emeritus.
- John C. Gebhard, C.E., Professor of Civil Engineering, Emeritus.
- James Lawrence Gregg, B.E., P.E., Professor of Materials Science and Engineering, Emeritus.
- George Raymond Hanselman, M.E., M.S., P.E., Professor of Mechanical Engineering, Emeritus.
- Solomon Cady Hollister, B.S., C.E., D.Eng., Sc.D., Professor of Civil Engineering, Emeritus.
- Eric V. Howell, C.E., Professor of Mechanics, Emeritus.
- Michel George Malti, A.B., B.S., M.E.E., Ph.D., Professor of Electrical Engineering, Emeritus.
- Clyde Walter Mason, A.B., Ph.D., Professor of Chemical Engineering, Emeritus.
- True McLean, E.E., P.E., Professor of Electrical Engineering, Emeritus.
- John Edwin Perry, B.S., Professor of Railroad Engineering, Emeritus.
- Harold C. Perkins, M.E., Professor of Mechanics, Emeritus.
- Fred Hoffman Rhodes, A.B., Ph.D., Professor of Chemical Engineering, Emeritus.
- William L. Richards, B.S., C.E., M.C.E. (Capt. USN, Ret.), Professor of Civil Engineering, Emeritus.
- Ernest William Schoder, B.B., B.S. in Min., Ph.D., World War Memorial Professor of Experimental Hydraulics, Emeritus.
- Herbert Henry Scofield, M.E., Professor of Testing Materials, Emeritus.
- Robert Hermann Siegfried, M.E., Professor of Mechanical Engineering, Emeritus.
- Everett Milton Strong, B.S., P.E., Professor of Electrical Engineering, Emeritus.
- Charles Leopold Walker, C.E., Professor of Sanitary Engineering, Emeritus.

## VISITING PROFESSORS

- Frank Feiner, A.B., M.S., Ph.D., Visiting Professor of Engineering Physics.
- Antoine Francis Gagne, Jr., B.S.M.E., M.S.M.E., Visiting Professor of Machine Design.
- Maurice Sven Gjesdahl, B.S., M.S., Visiting Professor of Machine Design.
- Michael D. Greenberg, B.M.E., M.S., Ph.D., Visiting Assistant Professor of Theoretical and Applied Mechanics.
- Le Roy F. Henderson, B.C.E., M.Eng.Sci., Ph.D., Senior Research Associate of Aerospace Engineering.
- Bernd Höflinger, Dipl.-Phys., Dr.rer.nat., Visiting Professor of Electrical Engineering.
- Robert Hollier, A.B., M.S., Ph.D., Visiting Associate Professor of Operations Research.
- Robin J. Knops, B.S., Ph.D., Visiting Associate Professor of Theoretical and Applied Mechanics (fall term).
- Peter G. Winchell, Ph.D., Visiting Professor of Materials Science and Engineering.
- Charles Peter Wroth, B.A., M.A., Ph.D., Visiting Associate Professor of Civil Engineering.

## FACULTY

Noble Wayne Abrahams, B.S. (Capt., U.S.N., Ret.), Assistant Professor of Mechanical Engineering.

Ralph Palmer Agnew, Ph.D., D.Sc., Professor of Mathematics.

Kyle T. Alfried, B.S., M.S., Ph.D., Assistant Professor of Theoretical and Applied Mechanics.

Robert Nelson Allen, B.S., Associate Professor of Industrial Engineering and Operations Research; Secretary of the Faculty of Industrial Engineering.

Paul Denzel Ankrum, B.S.E.E., A.B., M.S., Professor of Electrical Engineering.

Peter L. Auer, B.A., Ph.D., Professor of Aerospace Engineering.

Joseph M. Ballantyne, B.S., B.S.E.E., S.M., Ph.D., Assistant Professor of Electrical Engineering.

Robert W. Balluffi, B.S., Ph.D., Professor of Materials Science and Engineering.

Boris W. Batterman, B.S., Ph.D., Associate Professor of Materials Science and Engineering, and of Engineering Physics.

Robert Eric Bechhofer, A.B., Ph.D., Professor of Operations Research; Chairman of the Department.

Vaughn C. Behn, B.S., M.S., D.Eng., P.E., Associate Professor of Civil Engineering.

Donald J. Belcher, B.S., M.S., C.E., P.E., Professor of Civil Engineering.

Richard Harold Bernhard, B.M.E., M.S., Ph.D., Assistant Professor of Industrial Engineering and Operations Research.

Donald F. Berth, B.S.ChE., M.S.ChE., Lecturer in Engineering; Director of College Relations.

Richard Dean Black, B.S.A.E., M.S.A.E., Ph.D., Associate Professor of Agricultural Engineering.

Robert R. Blackmun, B.S., Lecturer in Computer Science.

John M. Blakely, B.S., Ph.D., Associate Professor of Materials Science and Engineering.

George H. Blessis, B.E., M.E., Lecturer, Environmental Systems Engineering; Coordinator, Construction Industry Program — Continuing Education.

Henry D. Block, B.S., B.C.E., M.S., Ph.D., Professor of Applied Mathematics.

Ralph Bolgiano, Jr., B.S., B.E.E., M.E.E., Ph.D., Professor of Electrical Engineering.

John Franklin Booker, B.E., M.A.E., Ph.D., Associate Professor of Mechanical Engineering (on leave, academic year 1967-68).

Neil Mather Brice, B.Sc., M.Sc., Ph.D., Associate Professor of Electrical Engineering.

Kenneth M. Brown, B.S., M.S., Ph.D., Assistant Professor of Computer Science.

Wilfried Brutsaert, Ag.E., M.S., Ph.D., Associate Professor of Civil Engineering.

Nelson Howard Bryant, E.E., M.E.E., Associate Professor of Electrical Engineering.

Arthur Houghton Burr, B.S., M.S., Ph.D., Hiram Sibley Professor of Mechanical Engineering; Chairman of the Department of Machine Design.

Malcolm S. Burton, B.S., S.M., Professor of Materials Science and Engineering; Assistant Director of the Department.

K. Bingham Cady, B.S., Ph.D., Associate Professor of Engineering Physics; Representative of the Engineering Field of Nuclear Engineering.

Herbert J. Carlin, B.S., M.S., D.E.E., J. Preston Levis Professor of Engineering; Professor of Electrical Engineering; Director of the School.

Nephi Albert Christensen, B.S., B.S.C.E., M.S.C.E., Ph.D., Professor of Civil Engineering.

- David D. Clark, A.B., Ph.D., Professor of Engineering Physics; Director of Nuclear Reactor Laboratory.
- Roderick K. Clayton, B.S., Ph.D., Professor of Engineering Physics, and of Biology and Biophysics.
- George G. Cocks, B.S., Ph.D., Associate Professor of Chemical Engineering.
- Bartholomew Joseph Conta, B.S., M.S., Professor of Mechanical Engineering.
- Harry D. Conway, B.Sc., M.A., Ph.D., D.Sc., Professor of Theoretical and Applied Mechanics.
- Richard Walter Conway, B.M.E., Ph.D., Professor of Industrial Engineering and Operations Research, and of Computer Science; Director of the Office of Computer Services.
- J. Robert Cooke, B.S., M.S., Ph.D., Assistant Professor of Agricultural Engineering.
- Terrill A. Cool, B.S., M.S., Ph.D., Assistant Professor of Mechanical Engineering.
- Dale R. Corson, A.B., A.M., Ph.D., Professor of Engineering Physics and Physics; Provost of the University.
- Edmund T. Cranch, B.M.E., Ph.D., Professor of Theoretical and Applied Mechanics; Chairman of the Department; Professor of Engineering Physics and of Mechanical Engineering; Assoc. Dean of the College of Engineering.
- Trevor R. Cuykendall, B.S., M.S., Ph.D., Spencer T. Olin Professor of Engineering; Professor of Engineering Physics; Associate Director of the Department.
- G. Conrad Dalman, B.E.E., M.E.E., D.E.E., Professor of Electrical Engineering.
- P. C. Tobias de Boer, Jr., M.E., Ph.D., Associate Professor of Aerospace Engineering.
- Nicholas DeClaris, B.S., M.S., Sc.D., Professor of Electrical Engineering.
- David Dropkin, M.E., M.M.E., Ph.D., Professor of Mechanical Engineering; Representative of the Graduate Field.
- George Burton DuBois, A.B., M.E., P.E., Professor of Mechanical Engineering (on leave, academic year 1967-68).
- Leonard B. Dworsky, B.S.C.E., M.A., Professor of Civil Engineering; Director of Water Resources Center.
- Lester Fuess Eastman, B.E.E., M.S., Ph.D., Professor of Electrical Engineering.
- Victor Henry Edwards, B.A., Ph.D., Assistant Professor of Chemical Engineering.
- Hamilton Emmons, A.B., M.S., Ph.D., Assistant Professor of Industrial Engineering and Operations Research.
- William Harry Erickson, B.S., M.S., Professor of Electrical Engineering; Associate Dean of the College of Engineering.
- Samuel J. Errera, B.S., M.S., Ph.D., Senior Research Associate of Civil Engineering.
- Melvin I. Esrig, B.B.A., B.C.E., M.S., Ph.D., Associate Professor of Civil Engineering.
- John Parkhill Evans, B.M.E., M.S., Instructor of Industrial Engineering and Operations Research.
- Howard Newton Fairchild, M.E., E.E., P.E., Professor of Mechanical Engineering.
- Louis Michael Falkson, A.B., A.M., Ph.D., Assistant Professor of Environmental Systems Engineering, and of Economics.
- Donald T. Farley, B.E.P., Ph.D., Professor of Electrical Engineering.
- Terrence L. Fine, B.E.E., S.M., Ph.D., Assistant Professor of Electrical Engineering.
- Robert Kaul Finn, Ch.E., Ph.D., Professor of Chemical Engineering and of Nutrition.

## 164 FACULTY AND STAFF

Gordon P. Fisher, B.E., D.Eng., P.E., Professor of Civil Engineering; Chairman of the Department of Environmental Systems Engineering.

Patrick C. Fisher, B.S., M.B.A., Ph.D., Associate Professor of Computer Science.

Hans H. Fleischmann, Dipl. Phys., Dr.rer.nat., Associate Professor of Engineering Physics.

Orval C. French, B.S.A.E., M.S.A.E., Professor of Agricultural Engineering; Head of the Department; Chairman of the Joint Faculty Committee on Agricultural Engineering.

Ronald Bay Furry, B.S., M.S., Ph.D., Associate Professor of Agricultural Engineering.

Richard H. Gallagher, B.C.E., M.C.E., Ph.D., Professor of Civil Engineering.

Charles Donald Gates, B.A., M.S., Professor of Civil Engineering; Chairman of the Department of Water Resources Engineering; Representative of the Graduate Field of Water Resources.

Benjamin Gebhart, B.S.E., M.S.E., Ph.D., Professor of Mechanical Engineering.

Roger Loren Geer, M.E., Associate Professor of Mechanical Engineering.

Albert Richard George, B.S.E., M.A., Ph.D., Assistant Professor of Aerospace Engineering.

Peter Gergely, B.Eng., M.S., Ph.D., Assistant Professor of Civil Engineering.

Thomas Gold, B.A., M.A., Professor of Electrical Engineering, and of Astronomy.

Henry Phillip Goode, B.S., M.S., P.E., Professor of Industrial Engineering and Operations Research.

Walter H. Graf, Dipl.Ing., Ph.D., Assistant Professor of Civil Engineering.

Wesley Winnfred Gunkel, B.S.A.E., M.S.A.E., Ph.D., Professor of Agricultural Engineering; Representative of the Graduate Field.

Peter Harriott, B.Chem.E., Sc.D., Professor of Chemical Engineering.

Paul Leon Hartman, B.S.E.E., Ph.D., Professor of Engineering Physics, and of Physics.

Juris Hartmanis, Cand.Phil., M.A., Ph.D., Professor of Computer Science; Chairman of the Department.

J. Eldred Hedrick, B.A., M.S., Ph.D., P.E., Professor of Chemical Engineering.

David John Henkel, B.S., Ph.D., Professor of Civil Engineering; Chairman of the Department of Geotechnical Engineering.

William L. Hewitt, A.B., B.C.E., M.C.E., P.E., Associate Professor of Civil Engineering.

John E. Hopcroft, B.S., M.S., Ph.D., Associate Professor of Computer Science.

John P. Howe, B.S., Ph.D., Professor of Engineering Physics (on leave, academic year 1967-68).

Clyde Edwin Ingalls, E.E., P.E., Professor of Electrical Engineering (on leave, academic year 1967-68).

Joseph Olmstead Jeffrey, M.E., M.M.E., Professor of Materials Science and Engineering.

Frederick Jelinek, S.B., S.M., Ph.D., Associate Professor of Electrical Engineering.

Edwin F. Johnson, B.A., Ph.D., Assistant Professor of Electrical Engineering.

Herbert H. Johnson, B.S., M.S., Ph.D., Professor of Materials Science and Engineering; Representative of the Graduate Field.

Myunghwan Kim, B.S., M.E., Ph.D., Associate Professor of Electrical Engineering.

Kenneth O. Kortanek, B.S., B.A., M.A., Ph.D., Associate Professor of Operations Research.

Richard H. Lance, B.S., M.S., Ph.D., Associate Professor of Theoretical and Applied Mechanics.

- Alonzo W. Lawrence, B.S., M.S., Ph.D., Assistant Professor of Civil Engineering.
- Charles A. Lee, B.E.E., Ph.D., Associate Professor of Electrical Engineering.
- Sidney Leibovich, B.S., Ph.D., Assistant Professor of Thermal Engineering.
- Jean P. Leinroth, B.M.E., S.M., Sc.D., Associate Professor of Chemical Engineering.
- Gilbert Levine, B.S., Ph.D., Professor of Agricultural Engineering.
- Taylor D. Lewis, B.S.E., C.E., P.E., Professor of Civil Engineering.
- Che-Yu Li, B.S.E., Ph.D., Associate Professor of Materials Science and Engineering.
- Ta Liang, B.E., M.C.E., Ph.D., Professor of Civil Engineering.
- Richard L. Liboff, A.B., Ph.D., Associate Professor of Electrical Engineering.
- James A. Liggett, B.S.C.E., M.S., Ph.D., Associate Professor of Civil Engineering.
- Simpson Linke, B.S., M.E.E., Professor of Electrical Engineering.
- Robert Theodore Lorenzen, B.S., B.S.C.E., M.S., Associate Professor of Agricultural Engineering.
- Daniel Peter Loucks, B.S., M.S., Ph.D., Assistant Professor of Civil Engineering.
- Geoffrey S. S. Ludford, B.A., M.A., Ph.D., Sc.D., Professor of Applied Mathematics.
- David Corbin Ludington, B.S., M.S., Associate Professor of Agricultural Engineering.
- Walter R. Lynn, B.S.C.E., M.S.S.E., Ph.D., Professor of Civil Engineering.
- George B. Lyon, B.S., M.S., P.E., Associate Professor of Civil Engineering.
- Lee Aubry MacKenzie, B.E.E., M.S., Ph.D., Associate Professor of Electrical Engineering (on leave, academic year 1967-68).
- William Laughlin Maxwell, B.M.E., Ph.D., Associate Professor of Operations Research; Graduate Field Representative.
- Henry Stockwell McGaughan, B.S.E. (in Physics), M.E.E., Professor of Electrical Engineering.
- William McGuire, B.S.C.E., M.C.E., P.E., Professor of Civil Engineering; Director of the School; Representative of the Graduate Field.
- Paul Rowley McIsaac, B.E.E., M.S.E., Ph.D., Professor of Electrical Engineering.
- Howard N. McManus, Jr., B.S.M.E., M.S., Ph.D., Professor of Mechanical Engineering.
- Arthur J. McNair, B.S., M.S., C.E., P.E., Professor of Civil Engineering.
- Ross McPherson, B.S., M.S., Ph.D., Assistant Professor of Engineering Physics; Representative of the Graduate Field of Nuclear Science and Engineering.
- Charles W. Merriam, III, Sc.B., M.S., Sc.D., Professor of Electrical Engineering.
- Wilbur Ernest Meserve, B.S., M.S., M.E.E., Ph.D., P.E., Professor of Electrical Engineering.
- William Frederick Millier, B.S., Ph.D., Professor of Agricultural Engineering.
- Franklin Kingston Moore, B.S., Ph.D., Joseph C. Ford Professor of Mechanical Engineering; Chairman of the Department of Thermal Engineering.
- John P. Moran, B.M.E., M.Aero.E., Ph.D., Assistant Professor of Theoretical and Applied Mechanics; Secretary of the Faculty of the Department.
- John R. Moynihan, M.E., M.M.E., P.E., Professor of Theoretical and Applied Mechanics; Assistant Chairman of the Department; Secretary of the Faculty of the College of Engineering.
- John Nation, B.Sc., A.R.C.S., Ph.D., D.I.C., Assistant Professor of Electrical Engineering.
- Mark S. Nelkin, S.B., Ph.D., Professor of Engineering Physics; Representative of the Graduate Field of Applied Physics.

## 166 FACULTY AND STAFF

- Herbert Frank Newhall, A.B., Ph.D., Professor of Engineering Physics, and of Physics.
- Benjamin Nichols, B.E.E., M.E.E., Ph.D., Professor of Electrical Engineering.
- Arthur H. Nilson, B.S.C.E., M.S., Ph.D., P.E., Associate Professor of Civil Engineering.
- Robert E. Osborn, B.S.E.E., P.E., Associate Professor of Electrical Engineering.
- Walter S. Owen, B.Eng., M.Eng., Ph.D., Thomas R. Briggs Professor of Engineering; Professor of Materials Science and Engineering; Director of the Department.
- Yih-Hsing Pao, B.S., M.S., Ph.D., Associate Professor of Theoretical and Applied Mechanics; Representative of the Graduate Field.
- Richard Magruder Phelan, B.S., M.M.E., Professor of Mechanical Engineering.
- Christopher Pottle, B.E., M.S., Ph.D., Associate Professor of Electrical Engineering.
- Narahari Umanath Prabhu, B.A., M.A., M.Sc., Professor of Operations Research.
- Edwin L. Resler, Jr., B.S.Aero.E., Ph.D., Professor of Aerospace Engineering, Electrical Engineering, and Engineering Physics; Director of the Graduate School of Aerospace Engineering.
- Charles S. ReVelle, B.Ch.E., Ph.D., Assistant Professor of Civil Engineering.
- Thor N. Rhodin, B.S., A.M., Ph.D., Associate Professor of Engineering Physics.
- David N. Robinson, B.S., M.S., Ph.D., Assistant Professor of Theoretical and Applied Mechanics.
- Ferdinand Rodriguez, B.S., M.S., Ph.D., Associate Professor of Chemical Engineering.
- Joseph L. Rosson, B.S., M.E.E., Associate Professor of Electrical Engineering; Assistant Director of the School.
- Norman Rostoker, B.A.Sc., M.A., Sc.D., IBM Professor of Engineering and Chairman for Applied Physics.
- Gian-Carlo Rumi, Dott.Ing., M.S., Ph.D., Assistant Professor of Electrical Engineering.
- Arthur L. Ruoff, B.S., Ph.D., Professor of Materials Science and Engineering.
- Henri Samuel Sack, D.Sc., Walter S. Carpenter Jr. Professor of Engineering; Professor of Engineering Physics; Director of the Materials Science Center.
- Mrs. Miriam M. Salpeter, B.A., M.A., Ph.D., Associate Professor of Engineering Physics.
- Gerard Salton, A.B., M.A., Ph.D., Professor of Computer Science.
- Sidney Saltzman, B.S.M.E., M.S.I.E., Ph.D., Assistant Professor of Industrial Engineering and Operations Research, and of Computer Science; Associate Director of the Office of Computer Services.
- Martin Wright Sampson, B.S., M.S., Associate Professor of Industrial Engineering and Operations Research.
- Stephen L. Sass, B.Ch.E., Ph.D., Assistant Professor of Materials Science and Engineering.
- Byron W. Saunders, B.S., M.S., Professor of Industrial Engineering and Operations Research and Director of the School.
- Eraldus Scala, B.S., M.S., D.Eng., Professor of Materials Science and Engineering.
- George F. Scheele, B.S.E., M.S., Ph.D., Assistant Professor of Chemical Engineering.
- Andrew Schultz, Jr., B.S., Ph.D., Professor of Industrial Engineering and Operations Research; Dean of the College of Engineering.
- Norman Roy Scott, B.S.(A.E.), Ph.D., Assistant Professor of Agricultural Engineering.

- William R. Scars, B.Aero.E., Ph.D., John LaPorte Given Professor of Engineering; Professor of Aerospace Engineering.
- A. Richard Seebass, III, B.S.E., M.S.E., Ph.D., Associate Professor of Aerospace Engineering; Representative of the Graduate Field.
- David N. Seidman, B.S., M.S., Ph.D., Assistant Professor of Materials Science and Engineering.
- Robert G. Sexsmith, B.A.Sc., M.S., Ph.D., Assistant Professor of Civil Engineering.
- Shan Fu Shen, B.S., Sc.D., Professor of Aerospace Engineering.
- Edwin Stanley Shepardson, B.S., M.S., Professor of Agricultural Engineering.
- Dennis Granville Shepherd, B.S., Professor of Mechanical Engineering; Director of the Sibley School of Mechanical Engineering.
- Benjamin M. Siegel, B.S., Ph.D., Professor of Engineering Physics, and of Physics.
- John Cornelius Siemens, B.S., M.S., Ph.D., Assistant Professor of Agricultural Engineering.
- John Silcox, B.S., Ph.D., Associate Professor of Engineering Physics (on leave, academic year 1967-68).
- Floyd O. Slate, B.S., M.S., Ph.D., Associate Professor of Civil Engineering.
- Neil James Alexander Sloane, B.E.E., B.A., M.S., Ph.D., Assistant Professor of Electrical Engineering.
- George V. Smith, B.S., Sc.D., P.E., Francis Norwood Bard Professor of Metallurgical Engineering; Professor of Materials Science and Engineering.
- Howard Godwin Smith, E.E., M.E.E., Ph.D., Professor of Electrical Engineering; Director of the Division of Basic Studies of the College of Engineering.
- Julian C. Smith, B.Chem., Chem.E., Professor of Chemical Engineering; Director of Continuing Education.
- James Wendell Spencer, B.C.E., M.C.E., P.E., Professor of Agricultural Engineering.
- Ravindra Nath Sudan, B.A., D.I.I.Sc., D.I.C., Ph.D., Associate Professor of Electrical Engineering.
- Chung L. Tang, B.S., M.S., Ph.D., Associate Professor of Electrical Engineering.
- Anthony Taylor, B.Sc., Ph.D., Assistant Professor of Materials Science and Engineering.
- Howard Milton Taylor, III, B.M.E., M.I.E., Ph.D., Assistant Professor of Operations Research.
- James Shelby Thorp, B.E.E., M.S., Ph.D., Associate Professor of Electrical Engineering.
- Raymond G. Thorpe, B.Chem.E., M.Chem.E., Associate Professor of Chemical Engineering.
- Hwa Chung Torng, B.S., M.S., Ph.D., Associate Professor of Electrical Engineering.
- Donald Lawson Turcotte, B.S., M.Aero.E., Ph.D., Associate Professor of Aerospace Engineering.
- Robert L. Von Berg, B.S., M.S., Sc.D., P.E., Professor of Chemical Engineering.
- Norman M. Vrana, B.E.E., M.E.E., Associate Professor of Electrical Engineering.
- Leonard Samuel Wagner, B.E.E., M.S.E.E., Ph.D., Associate Professor of Electrical Engineering (Resident at Arecibo Ionospheric Observatory, Arecibo, Puerto Rico, academic year 1967-68.)
- Robert J. Walker, B.A., Ph.D., Professor of Computer Science, and of Mathematics.
- Watt W. Webb, S.B., Sc.D., Professor of Engineering Physics (on leave, Spring 1968).

## 168 FACULTY AND STAFF

- Peter Wegner, B.Sc., M.A., Associate Professor of Computer Science.  
Robert Louis Wehe, B.S., M.S., Associate Professor of Mechanical Engineering.  
Lionel Ira Weiss, B.A., M.A., Ph.D., Professor of Operations Research.  
Charles Benjamin Wharton, B.S., M.S., Professor of Electrical Engineering.  
Richard N. White, B.S., M.S.C.E., Ph.D., Associate Professor of Civil Engineering.  
Herbert F. Wiegandt, B.S.Ch.E., M.S.E., Ph.D., Professor of Chemical Engineering.  
Charles Calvert Winding, B.Chem.E., Ph.D., P.E., Herbert Fisk Johnson Professor of Industrial Chemistry; Professor of Chemical Engineering; Director of the School; Representative of the Graduate Field.  
George Winter, Dipl.Ing., Ph.D., Class of 1912 Professor of Engineering; Professor of Civil Engineering; Chairman of the Department of Structural Engineering.  
George J. Wolga, B.E.P., Ph.D., Associate Professor of Electrical Engineering, and of Engineering Physics.  
William S. Worley, B.A., M.S., Lecturer in Computer Science; Assistant Director of the Office of Computer Services.  
Robert York, B.S., M.S., Sc.D., P.E., Socony Mobil Professor of Chemical Engineering.  
Stanley William Zimmerman, B.S., M.S., P.E., Professor of Electrical Engineering.

## ENGINEERING COLLEGE COUNCIL

- Alexander M. Beebe, Chairman, Executive and Finance Committee, Rochester Gas and Electric Corporation.  
Arthur M. Bueche, Vice President, Research and Development Center, General Electric Company.  
John M. Clark, General Manager, Electrochemicals Department, E.E. du Pont de Nemours and Company, Inc.  
Herbert Dow Doan, President, Dow Chemical Company.  
Paul O. Gunsalus, (retired) Assistant Vice President, New York Telephone Company.  
Jerrier A. Haddad, Vice President, Engineering, Technology, and Programming, International Business Machines Corporation.  
James Hillier, Vice President, RCA Laboratories, Radio Corporation of America.  
S.C. Hollister, (retired) Dean of Engineering, Cornell University.  
D. Brainerd Holmes, Senior Vice President, Raytheon Company.  
Kenneth Kesselring, General Manager, Knolls Atomic Power Laboratory, General Electric Company.  
Charles W. Lake, Jr., President, R.R. Donnelley and Sons.  
William Littlewood, Aviation Consultant and (retired) Vice President, American Airlines.  
Ira G. Ross, President, Cornell Aeronautical Laboratories, Inc.  
Philip Sporn, Chairman, System Development Committee, former chairman of the Board, American Electric Power Company, Inc.  
Winfield W. Tyler, Vice President, Research Laboratories, Xerox Corporation.  
J. Carlton Ward, Jr., (retired) Chairman of the Board, Vitro Corporation of America.  
Wallace Wilson, Vice President-Manufacturing, General Motors Corporation.  
Theodore P. Wright, (retired) Vice President for Research, Cornell University.

# Index

- Admission, Graduate 16
- Admission, Undergraduate, 14
- Advising and Counseling, 20
- Aerospace Engineering, 22, 85
- Agricultural Engineering, 25, 87
- Applied Mathematics, 8, 84
- Applied Physics, 8, 62

- Tuition and Financial Aid, 17
- Water Resources Engineering, 46, 109

## CORNELL UNIVERSITY ANNOUNCEMENTS

The Cornell Announcements are designed to give prospective students and others information about the University. The prospective student should have a copy of the Announcement of General Information; after consulting that, he may wish to write for one or more of the following Announcements:

New York State College of Agriculture; College of Architecture, Art, and Planning; College of Arts and Sciences; School of Education; College of Engineering; New York State College of Home Economics; School of Hotel Administration; New York State School of Industrial and Labor Relations; Center for International Studies; Officer Education (ROTC); Summer Session.

Undergraduate preparation in a recognized college or university is required for admission to the following Cornell divisions, for which Announcements are available:

Graduate School, Law School, Medical College, Graduate School of Medical Sciences, Cornell University-New York Hospital School of Nursing, Graduate School of Nutrition, New York State Veterinary College, Graduate School of Business and Public Administration.

Requests for the publications listed  
above may be addressed to

CORNELL UNIVERSITY ANNOUNCEMENTS  
Edmund Ezra Day Hall, Ithaca, New York 14850

(The writer should include his zip code.)
